Firm seeks NHTSA break to build MG TD replicar

By Jake Kelderman
Washington Reporter

WASHINGTON.—Tiny British Coach Work, Ltd., of Arnold, Pa., has asked NHTSA to give it a break.

The company, a division of Perfect Plastics Industries, wants to build plastic replicas of the historic 1952 MG TD sports car utilizing the engine and running gear of the Chevrolet Chevette.

However, due to the limitations of plastic and the company's desire to be as true to the the original vehicle as possible, the firm believes it cannot meet several of the current safety standards.

They are the standards for: Reflection surfaces (Standard 107); lamps, reflective devices and associated equipment (Standard 108); occupant protection in interior impact (Standard 201); head restraints (Standard 202); door locks and door retention components (Standard 206); occupant crash protection (Standard 208), and the side door strength requirements (Standard 214).

British Coach Works, Ltd., said it will build only 30 of the MG TD "replicars" this year (the company designates it as the BCW 52 T-Series Replicar) and that it could produce no more than an additional 30 even if the market demands it.

The firm employs 30 people and had retained earnings of $205,000 at the end of 1983.

It said that granting the exemption would be in the public interest because it is located in a depressed part of the country. It also saids that the cars would likely be used "only occasionally."

NHTSA said that anyone with comments on the petition should make them on or before April 15.

New Ford dealers

DENVER.—Dan L. Stanley and Thomas H. George have purchased Bill Eger Ford.

For 99,150 long-life vehicles valued at $1.1 billion

Postoffice turns down diesels

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The U.S. Postal Service chose not to buy diesel-engined postal vehicles because it felt there were no domestic makers of small diesel engines with proven automotive applications and because it also felt diesels had certain operational limitations.

That is the finding of the General Accounting Office, which was asked by two Democratic congressmen, Rep. Gerry Sikorski, of Minnesota, and Rep. Robert Garcia, of New York, to review the Postal Service's decision to buy 99,150 long-life delivery vehicles equipped with small gasoline engines.

Long-life is defined as a life expectancy of 24 years with a 12-year life expectancy for the powertrain.

The Postoffice contract for the long-life vehicles is expected to be awarded in July. Total price estimate is about $1.1 billion.

GAO—Congress' watchdog agency—said it had no reason to question the Postoffice's November, 1983, decision to buy gasoline-powered long-life vehicles since, so far, there is no domestic maker with proven small diesel automotive application and consequently no way to make a gasoline-diesel comparison.

Even though there are foreign diesel engines that can meet the specifications, the postmaster general has said that, as a policy matter, the engines must be bought from domestic makers.

The Postal Service is testing small domestic diesel engines in 100 light-delivery vehicles because of a prior commitment by the postmaster general to help domestic makers develop small diesels.

The two domestic makers currently involved in this research project are Onan Corp. and Teledyne-Continental, which have had a number of vehicles in various regions of the country.

Because of this program and because of the substantial potential cost savings, GAO suggested to the Postal Service that it might reconsider its decision to source vehicles with small gasoline engines—particularly in view of the size of the order and the ample time before sourcing.

But the Postal Service disagreed and last June proceeded to solicit technical proposals for the gasoline-powered long-life vehicles.

Arguments given by the Postoffice were:

1. The current tests are not controlled and will not give comparative cost data.

2. It would be unfair to potential bidders to ask for technical proposals and then decide to reduce the size of the contract if the test results from diesel-powered cars warranted it.

3. Retaining the diesel option would discourage some qualified sellers from competing and possibly result in a failed or at least more costly procurement.

4. No basis exists to show a mix of diesel and gasoline engines is desireable, much less to indicate what the appropriate mix should be.

While GAO agreed that the current tests of diesel long-life vehicles will not answer all questions, it insisted that getting data on fuel consumption and maintenance for a one-year period for 100 vehicles at six locations would be enough to determine if the gasoline-engine-only decision should be reconsidered.

Sourcing some diesel-powered vehicles, GAO said, would give the Postal Service enough flexibility to enable it to review the diesel engine test data and, if warranted, study fully using diesel engines in light delivery vehicles.

Without such a test of diesel-powered vehicles, concluded GAO, it is not possible to know whether they would be less costly than gasoline-powered ones.

But the postmaster general's response to GAO's draft report seems to preclude any possibility for including diesel engines in its current procurement of 99,150 long-life vehicles.

Audi sales top 71,000 in '84; set record

TROY, Mich.—Volkswagen of America's Audi Division sold more than 71,000 cars in 1984, almost 40 percent more than its previous record set in 1981.

Last year's sales increased 48.5 percent over 1983, despite interrupted production due to the German metalworkers' strike.

Audi expects to sell about 80,000 vehicles in 1985, with sales propelled by the Audi 4000-S, the Coupe GT and the 4000-S Quattro.

Audi dealers in the U.S. retailed 71,206 vehicles in 1984 for a 48.5-percent increase over the 1983 total.

The 1984 sales performance exceeded Audi's previous record of 50,817 units in 1981. Audi dealers had broken that record in 1984 after nine months.

Mission to Tokyo will study Japan's auto production

LOS ANGELES —Why can Japan auto makers produce a car for about $1,500 less than their American counterpart?

For the answer to that question and other insights into the quality production of Japanese auto makers, a second International Industrial Study Mission to Tokyo has been announced by the Technology Transfer Institute. It begins March 30.

Team director will be Kiyoski Suzaki, manager in charge of just-in-time production and total quality control for Theodore Barry and Associates.

Plants in Tokyo, Nagoya and Osaka will be visited. They will include Aishin Seiki Co., Ltd., maker of brakes and transmissions for Toyota; Kawasaki Heavy Industries, Ltd., pioneer in industrial robots via Unimation, Inc.; Kanto Auto Works, Ltd., a Toyota affiliate, and Bridgestone Tire Co., Ltd.

Acceleration is probed on 2.8 million Nissans

WASHINGTON.—NHTSA has opened an investigation into alleged sudden acceleration in 1976-84 Nissan 280-Z, 280-ZX and 300-ZX cars. This is being piggybacked on another similar investigation of 1974-83 Datsuns. The two investigations involve some 2.8 million cars.

The Center for Auto Safety said it has been receiving consumer complaints and has been informing NHTSA of the problem for a long time. The problem is said to occur in cars with manual and with automatic transmissions.

Honda leads with record 610

Sales per outlet up; Japanese top the list

Continued from Page 1

earlier it had been second behind Renault Alliance.

Cavalier earned the top average among compacts, moving up from the number two spot. Cutlass Supreme held on to first place in the intermediate category, and Olds 88 stayed on top among the standards. Cadillac was firmly entrenched in the luxury segment, its average more than twice that of second-place Lincoln (121 vs. 58).

All five major U.S. auto makers increased their sales per outlet in 1984. General Motors climbed to 458 from 402 in 1983; Ford Motor Co. rose to 358 from 289, and Chrysler Corp. jumped to 250 from 226.

American Motors, which includes the AMC Eagle plus domestic and imported Renaults, averaged 135, a modest increase from 125 in 1983 which had been a leap from 96 in 1982. Volkswagen, including domestic Rabbits and Golfs plus the VW import nameplates, was up to 197 from 177 a year earlier.

Honda sales per outlet include cars built in Ohio and those imported from Japan. The average was 610 last year, up a substantial 23.5 percent from 494 in 1983. Since the bulk of its cars come from Japan, Honda is counted as an import in the Automotive News dealer census and sales-per-outlet figures.

Looking at organizational structure of GM's small-car group

CPC: One profit center,3 marketing units

Continued from Page 3

who heads that group, was head of GM's old data processing group, Management Information Systems.

"We are using our information technology as a way of developing a competitive edge in the marketplace," Reuss said. "Because of that, we have the EDS operations under our strategic planning so they encompass not only our regular businss plan but a lot of other things."

Peapples is also working with a group to decide how to bring Saturn into the CPC stable.

The flow of the operation is monitored by the organization program manager, Carlisle R. Davis. His job is to make sure the organizational changes are occuring as planned. Those include systems, structural and cultural changes, Reuss said.

"We have a war room set up with timeframes and goals," he said.

Davis also is responsible for assessing CPC's competitive ability in three areas—distribution, product delivery time and how competitive CPC is in the body shops.

"His organization serves as a focal point so our manufacturing people all over the world are integrated under him," Reuss said.

Public affairs is also a group director position, held by Mark Hogan. Darwin (Dee) Allen is in charge of civic affairs and media relations, and Richard Wilmot is responsible for internal employe communications. Both report to Hogan.

In engineering, Schultz must integrate more than 8,300 engineers from separate divisions into a single engineering organization.

The new group has a four-phase product development strategy beginning with continuous technological developments. It then tackles specific vehicles and develops them for a specific market and follows up with design validation and the process that will build the product.

The first CPC-designed vehicle will be introduced around 1990.

The new financial group includes the three divisions and parts of the former Fisher Body and GMAD operations. They are being formed into a single group with a common management and accounting sytem. The financial operations are headed by John Vacketta.

The financial staff has been reorganized and is now operational. Plans are to house the operation at CPC headquarters at the GM Technical Center in Warren, Mich.

David Campbell is a GM vice president and head of the CPC operations group. It includes responsibility for engine, body and assembly operations, giving the group total responsibility for the car, its parts and assembly.

GM of Canada has a strong link to this group.

The operations unit is involved in the early phases of product development. The manufacturing specialists and the design engineers begin to work together early in the production of a new product.

Those new approaches will be applied initially at Saturn and later moved to other GM operations.

The CPC personnel group, headed by Richard Huber, will provide leadership, expertise and services to the entire group in areas like industrial relations, human resources management and organization planning, plus doing the normal personnel tasks. It will also be improving the quality of worklife for hourly and salaried personnel as CPC moves toward a "team culture."

It will be very involved with Saturn during the early part of that venture.

The UAW has already become very involved in changing the culture. Shop committees from the plants have come to Detroit to work with other CPC personnel to create new plants or modernize old ones, even before CPC has any modernization approval

"That is a new attitude," Reuss said. "They wouldn't have done that five years ago, and I guess we wouldn't have asked them. It's a two-way street."

The personnel staff's ability to create a team concept is of ultra-importance to the success of the CPC Group.

"At CPC, our three basic thrusts are customer satisfaction, people and communication," Reuss said. "We take those very seriously. So the people part of our business is very important."

The primary functions of the quality group, headed by John Urbanic, are to find out what the customers want and get those perceptions and expectations into a vehicle. The staff will also evaluate the employes' educational needs in quality and customer satisfaction.

The automotive groups, Chevrolet, Pontiac and GM of Canada, act as marketing and distribution arms. Chevrolet is headed by General Manager Robert Burger, Pontiac by General Manager J. Michael Losh, and GM of Canada by President/General Manager John F. Smith Jr. All three are GM vice presidents.

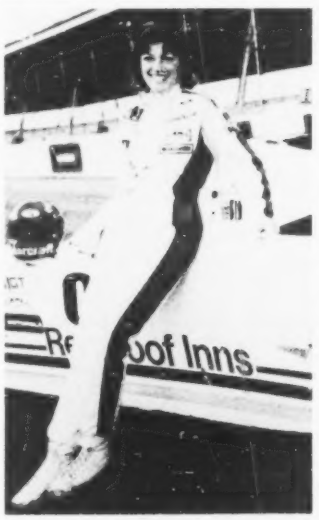
The reorganization of CPC is fluid and allows a lot of flexibility, Reuss said. For example CPC had several alternate plans, depending on the outcome of the Voluntary Restraint Agreement on Japanese cars.

And because it is so fluid, the job will never be over. There will always be something new to look at, Reuss said.

Canadian coins tossed; state loses revenue

CONCORD, N.H.—The State of New Hampshire is losing upwards of $1,200 a month in tolls from motorists tossing Canadian coins into correct-change bins because of decreased value of Canadian money compared with the dollar, said Peter Carlson, state turnpike director.

The stronger American dollar is blamed for the revenue loss. Carlson said that Boston banks are charging New Hampshire banks the difference in the exchange rate for weaker Canadian money.



Lyn St. James honored

AutoWeek magazine, sister publication to Automotive News, has named Lyn St. James, a Ford Motor Co. team driver, as Rookie of the Year in the 1984 International Motor Sports Assn. Camel GT road racing series. St. James made her professional racing debut in 1979 and joined Ford Motorsport in 1981.

Import supply falls to 31 days 250,216 on hand

Continued from Page 2

There was a 51-day supply of cars from other European countries, up from 47 days the previous month. The sales rate for those cars fell some 7 percent, while inventories remained stable.

By make, the supplies were: Jaguar, an estimated 35 days; Volvo, 40; Saab, 44; Peugeot, 48; Maserati, 52; Alfa Romeo, 79, and Renault, 233.

Japanese-built light trucks and their days' supplies: Mazda, 10; Nissan, 27; Toyota, 29; Chrysler, 33; Mitsubishi, 36, and Isuzu, 64.

Makers schedule 170,197 autos

Car output falls to 4-week low

By Louise Kertesz
Detroit Reporter

U.S. auto makers expected their lowest production in four weeks last week: 170,197 units, 1.67 percent below the previous week's 173,094 and 1.16 percent less than the year-ago week's 172,195.

Companies shared last week's scheduled production as follows: General Motors, 61.26 percent; Chrysler Corp., 16.92 percent; Ford Motor Co., 16.13 percent; American Motors, 2.20 percent; American Honda, 2.27 percent; New United Motor Mfg., Inc., 0.04 percent, and Volkswagen of America, 1.18 percent.

On April 1, GM will add a second shift at its Tarrytown (N.Y.) plant that produces the Buick Century and Pontiac 6000.

Ford's Edison (N.J.) plant is down this week (March 25) for conversion to the 1985½-model Escort and Lynx.

GM scheduled two overtime shifts Saturday (March 23) at its plants in Lansing (Oldsmobile Nos. 1 and 2); Janesville, Wis.; Linden, N.J.; Lordstown, O., and Orion Township, Mich.

One overtime shift was scheduled Saturday at GM's plant in Wentzville, Mo.

Honda's Marysville (O.) plant scheduled 10 hours of overtime Saturday and six hours of daily overtime last week.

Chrysler scheduled two overtime shifts Saturday at its plant in St. Louis (No. 2).

Two nine-hour daily shifts are scheduled this week at Chrysler plants in Belvidere, Ill.; Newark, Del., and St. Louis (No. 2).

Chrysler also has scheduled two 8½-hour daily shifts this week at its Jefferson (Detroit) plant.

Ford has scheduled daily overtime this week at its plants in Atlanta; Chicago; Dearborn; Kansas City; Lorain, O., and Wixom, Mich.

Court challenge expected on eased truck standards

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—NHTSA's lowering of light-truck fuel-economy standards for the 1985 and 1986 model years is expected to be challenged in court by the Center for Auto Safety and the Environmental Policy Institute.

NHTSA's action last October, at the behest of Ford Motor Co., reduced the 1985 composite light-truck fuel-economy standard from 21 MPG to 19.5 MPG and set a composite standard of 20.0 MPG for 1986 light trucks.

The original 1985 standard had also been set primarily at Ford's maximum fuel-economy capability since Ford accounted for a substantial market share and might have faced serious economic harm with a higher level.

The CAS and EPI petitioned the agency for reinstatement of the 1985 standard and for a higher 1986 standard. Both contended that NHTSA should place greater weight on the nation's need to conserve energy.

EPI said the current oil glut is temporary, and CAS said the impact of relaxing the standard is greater than NHTSA found because no consideration was given to the shift from cars to light trucks by consumers.

NHTSA denies this and has denied the CAS and EPI petitions.

NHTSA's position is that lower gasoline prices and the shift of consumer demand from fuel-efficient products to larger trucks and engines caused the loss of average fuel economy for Ford and other makers of light trucks.

But while acknowledging the uncertainty of the energy outlook, NHTSA also noted that if Ford had to meet a higher fuel-economy standard, its production and employment would be adversely affected and consumers wanting larger trucks and engines would merely shift to the products of other companies.

In addition, setting a standard high enough to force an industry-wide shift in model mix would have even more "negative economic consequences" and be "clearly beyond the realm of 'economic practicability' as contemplated in the Act."

NHTSA also said that manufacturers are continuing to improve fuel economy technologically and are introducing new, more-compact light trucks.

Finally, NHTSA specifically rejected the contention that the change is invalid because NHTSA issued the rule on Oct. 16 and the model year had started as early as Oct. 2. The petition maintained that NHTSA could not change a rule after the start of the model year.

Truck makers continue with heavy schedules

Last week, domestic truck makers continued to schedule weekly production higher than any week this year.

The targeted 70,208 units were 3.42 percent more than the previous week's 67,889 (which fell 2,596 units short of projection) and 8.25 percent better than the year-ago week's 64,855.

So far this year, 779,402 trucks have been built, 7.15 percent more than the 727,424 completed last year at this point.

About 2,450 hourly workers were recalled from layoff last week to resume medium-duty truck and transit bus production at General Motors' plants in Pontiac. About 200 more employes are scheduled to return by April 22.

GM scheduled two overtime shifts Saturday (March 23) at its plants in Flint (No. 2) and Baltimore.

One overtime shift was scheduled Saturday at GM's plant in Detroit.

Ford Motor Co. has scheduled daily overtime this week (March 25) at the following plants: Kansas City; Lorain, O.; Louisville; Wayne, Mich. (Michigan Truck); Norfolk, and Twin Cities.

Chrysler has scheduled two nine-hour daily shifts this week at its plant in Warren, Mich.

Canadian output of cars is down 9 pct. for year

Canadian makers scheduled production of 21,377 cars last week, 4.71 percent more than the previous week's 20,415 but 10.10 percent less than the 24,019 completed in the year-ago week.

Year-to-date, 231,393 cars have been assembled, 9.84 percent less than the 256,651 completed last year at this point.

Ford Motor Co.'s Oakville (Ont.) plant is down this week (March 25) for one week for conversion to the 1985½-model Escort and Lynx.

Truck makers planned to build 18,348 units last week, down a bit (1.77 percent) from the previous week's 18,678 but 2.19 percent more than the 17,955 completed in the year-ago week.

So far this year, 208,637 trucks have been assembled, 9.23 percent more than the 191,006 completed last year at this time.

Chrysler Corp.'s Windsor (Ont.) plant scheduled production of 2,754 Plymouth Voyagers, 2,748 Dodge Caravans and 606 Mini Ram Vans last week, bringing the total T-115s completed so far this year to 67,255.

Hike in Japanese car quota angers makers and UAW; Senate OK's trade resolution

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The news from Tokyo, specifically from the Ministry for International Trade and Industry (MITI), that the voluntary quotas on auto exports to the U.S. would be extended for another year and at a level not to exceed 2.3 million came a bit ahead of the scheduled date April 1.

That was also the date for an announcement of whether Japan would open its market further to U.S. telecommunications equipment.

The official statement from Minister K. Murata, of MITI, explaining extension of the VRA, made it clear that Japan still intends to open its market further.

The 2.3 million total compares with a limit of 1.85 million during the past year.

As the Tokyo news became known, the Japanese faced a situation in which they would be damned if they extended the VRA and damned if they did not. There was an even more serious fear of the U.S. market being flooded with Japanese cars.

"The 2.3 million level," said Robert McElwaine, president of the American International Automobile Dealers Assn., "is designed to make everybody mad. It respresents a total misreading of American attitudes toward trade."

The White House immediately indicated it really meant an end to the quotas but wanted more access to the Japanese market. The Senate last week passed a tough resolution, sending yet another message to the Japanese.

• Congress was divided, and it was not clear whether it really wanted an end to the Voluntary Restraint Agreement or continuation at the same or even lower levels or even an opportunity to retaliate.

Some congressmen were complaining that the extra estimated $4 billion in trade deficit with Japan would have to be offset by access to the Japanese market, in U.S. cars, auto products or other commodities.

Separately, Julian Morrison, president of the Automotive Parts and Accessories Assn., who had just returned from Japan, said it was "difficult to discern progress" in the sale of OE parts to Japan. He was, however, somewhat more optimistic about the future for aftermarket sales where he sensed "a great deal of vitality."

Because of the Japanese passion for other American goods, he thinks "we have a very good shot" at the aftermarket there, but he stressed, "We need two things in great abundance: Patience and Persistence." Morrison had met with officials from Nissan, Toyota, Honda and Mazda.

If the Japanese are confused about what the Americans want, it is not surprising since talks are currently going on about opening the Japanese market to electronics, wood products, medical products and telecommunications equipment as well as the private auto products talks conducted with APAA. With all the signals ing its decision to build cars in the U.S.

But a Mazda spokesman vehemently denied that the company is rethinking its Flat Rock com-

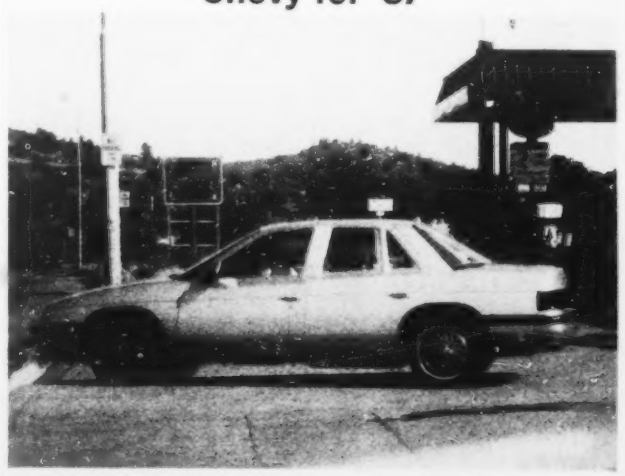
Chevy for '87



Chevrolet Corsica, part of the GM25 family

A new Chevrolet, currently set for introduction in the spring of 1986 as a 1987 model, is the four-door Corsica. Codenamed "GM25" or "L-body," the Corsica will be powered by a fuel-injected V-6 gasoline engine. A two-door version codenamed L-special and called Baretta, is due to apear about six months after the Corsica.

Betti climbs in Ford shift

By Richard Johnson
Detroit Reporter

An organization and personnel reshuffling at Ford Motor Co. last week will bring about a closer link between manufacturing and engineering in the product planning process at the company.

John A. Betti, who was appointed executive vice president of Technical Affairs last fall, has been redesignated executive vice president of Technical Affairs and Operating Staffs.

Ford also announced that Frederick Z. Herr has been named a vice president of the company and will be vice president of engineering and manufacturing.

Some industry observers likened the organizational changes to General Motors' split last year into large and small-car units, a move aimed in part at improving interdepartmental coordination and speeding the product development cycle.

The Ford changes represent a

Michigan officials acting to solve funding problem on Mazda plant

By Richard Johnson
Detroit Reporter

State officials in Michigan late last week appeared close to resolving a federal funding crisis which apparently threatened Mazda Motor Corp.'s plans to build an auto assembly plant in Flat Rock, Mich.

But rumors were nonetheless flying that the lapse of voluntary import restraints has prompted Mazda to reconsider its decision to build the $450 million plant. A Mazda spokesman denied that the VRA status affects the company's Flat Rock plans.

A shadow was cast over the project last week when a local development council's request for a $20.3 million Urban Development Action Grant (UDAG) loan at 8 percent interest from the U.S. Department of Housing and Urban Development was drastically reduced. Federal officials wound up approving a $2.5 million allocation, leaving a funding gap which Mazda described as critical.

According to a statement released by the company, "the full $20 million grant or its equivalent is critical to Mazda's project in Flat Rock."

HUD reportedly countered the local grant application with a proposal to make $6.5 million available interest free which, sources said would work out to approximately the same dollar value. Mazda is said to have accepted that arrangement.

But HUD approved only $2.5 million, to be used for various site preparation jobs. That leaves only a $4 million gap that Michigan officials have reportedly agreed to cover in some form.

A Michigan Commerce Department spokesman said department director Doug Ross and State Treasurer Robert Bowman met with Gov. James Blanchard late last Thursday (March 28) to discuss ways to keep the project alive.

"We're basically talking about a $4 million gap," said the spokesman. "Bob Bowman says that is something we can take care of, although we're still working on the mechanism."

Stalled talks last week between Mazda and local building trades involved in construction of the new facility caused additional concern about the site. A Mazda spokesman said the company met with representatives of the Detroit Building Trade Construction Council on March 27, but he said no additional meetings had been scheduled.

Negotiations reportedly broke down over work rules and wages. But a state Commerce Department spokesman said trade union talks and the UDAG funding issues are not unusual obstacles "for something this big."

A broadening concern late last week was that Mazda may be on the verge of pulling out altogether in response to the change in Japanese import restrictions in the U.S. Sources close to negotiations between Mazda and federal, state and local officials said rumors were afoot late last week that the Japanese auto maker was review-

Sentra joins truck output at Tennessee plant

First Nissan car built in U.S.

By Mary Beth Mayer
News Editor

SMYRNA, Tenn.—First Honda, then Toyota and now Nissan.

As Marvin Runyon, president and chief executive officer of Nissan Motor Mfg. Corp. U.S.A., drove a mist-blue Sentra off the line at the plant here last Tuesday (March 26), Nissan joined the ranks of Japanese auto makers assembling cars in the U.S.

Honda began the trend at Marysville, O., in November, 1982. Two years later, assembly of Chevrolet Novas, products of the General Motors-Toyota joint venture, was underway in Fremont, Calif.

Tennessee Gov. Lamar Alexander was at the end of the line to meet the milestone car, dubbed "Sentra One," and to lead a parade of employes and two high school bands through the sprawling plant.

Nissan has been building light pickup trucks at Smyrna since June, 1983.

"The facility was originally built for expansion," Runyon said, "so we've had to invest only $85 million for tooling and equipment for the Sentra." Nissan Motor Mfg. Corp. now represents an investment of over $745 million.

Sentra production has begun with the two-door sedan; four-door models will be added later. Smyrna Sentras will be in U.S. dealerships east of the Rockies in mid-April.

The Sentra is Nissan's top seller

Ford Alpha, Chrysler Liberty hope to edge out GM Saturn

Big 3 race to market with no-year small car

By Dan McCosh
Detroit Reporter

Who really is ahead in the latest race between domestic manufacturers to build a low-cost small car: GM's Saturn, Ford's Alpha or Chrysler's Liberty?

News Analysis

In a rare spectacle of national publicity over a car program unlikely to be seen in dealerships for three to five years, GM's Saturn project—a car to be built in "no-year," sometime before Chairman Roger B. Smith retires—has dramatically raised public interest in what the U.S. auto industry will be doing in the next decade.

Unable to let that kind of challenge lie, Chrysler Chairman Lee A. Iacocca recently "leaked" the news that Chrysler now expects to beat GM's Saturn car to market with its own Liberty project. Meanwhile, Ford wrote its own advanced-concept "no-year" Alpha program into the fine print of the latest UAW agreement, but otherwise has been strangely quiet.

All the publicity for "no-year" cars not likely to be seen in dealerships before the last page is turned in today's California car payment book has led to cynicism in some quarters that what is happening is just another replay of the "push the imports to the shores" hoopla that preceded the mid-1970s downsizing programs.

But today the Big Three are serious about dramatically altering traditional assembly techniques, and all have active, well-funded advanced car programs tailored to benefit from the potential cost savings. GM already has formed a separate corporation to build Saturn. Chrysler and Ford are in the throes of corporate reorganization, much of it aimed at laying the groundwork for the generation of cars a decade hence, although neither has gone as far as GM and formed a separate corporation to handle its project.

A review of the efforts at each company reveals significant differences in the various programs, from the marketing intent of the proposed cars themselves, to the overall impact on the corporations and even the technology being pursued.

While all are pursuing the same general goal—a relatively profitable, low-cost car competitive with Japanese makes—the differences reflect the varying amounts of financial resources available to meet the problem, as well as the importance of a competitive small car in each manufacturer's overall marketing strategy.

GM's Saturn Corp., the current public relations front-runner,

Sales rise 18 pct. for mid-March

By Jenny L. King
Detroit Reporter

If new-car sales are a true indicator, spring is here. And with it, the spring selling season.

Domestic passenger-car sales for March 11-20 leaped 18.29 percent over the 1984 total with Chrysler Corp. and Ford Motor Co. making continued progress in capturing larger shares of the market.

The 10-day total of 273,822 was well ahead of the 1984 sum of 231,481, but it wasn't a threat to the record for the period of 326,093 set in 1981. Second-best was 301,916 in 1978. The 1981 total was the result of extensive retail-customer rebate programs which only temporarily revived the ailing market.

This year's 273,822 total figured to a daily selling rate of 30,425 based on nine days compared with 28,935 from eight days the preceding year.

Calendar-year sales through March 20 were up 3.55 percent, to 1,740,801 from 1,681,166.

For the mid-March period, Chrysler reported 44,030 retail deliveries, up 56.35 percent from 28,162 in 1984. This was a 38.98-percent gain figured on a daily-rate basis. Ford was up 37.69 percent, to 75,332 from 54,710 (an increase of 22.39 percent daily rate).

General Motors sales of 144,851 were up 3.83 percent from 139,503 (off 7.70 percent daily rate). Volkswagen was up 34.70 percent, to 2,624 from 1,948 (up 19.67 percent daily rate).

Honda reported sales of 3,985 domestic Accords, up 65.49 percent from 2,408 (up 47.18 percent daily rate), while American Motors continued to run below year-ago sales levels, reporting

Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.

Going once, twice . . .

More than 300 classic, vintage, antique and special interest vehicles will be up for auction at Harrah's Automobile Collection in Reno Sept. 27-28. Among autos going to the top bidders will be the 1929 Duesenberg Model J Convertible Roadster, lower right, and the 1910 Thomas Touring, left.

$17.65 million at stake in grand jury probe

DeLorean plea-bargaining on taxes

By Edward Lapham
Marketing Editor

Copyright 1985, Automotive News

DETROIT.—Attorneys for former auto maker John Z. DeLorean already have had preliminary plea-bargaining discussions with the U.S. Attorney's office here, according to Automotive News sources.

Those discussions have included the possiblity that the former General Motors vice president might plead guilty to certain federal tax charges in exchange for a light sentence and non-prosecution on other charges, according to the sources.

"One hangup would seem to be John's insistence that he serve no jail time," one source said. "I'm not sure the feds are willing to agree to that."

DeLorean's attorney, Howard Weitzman, was unavailable for comment before presstime. Weitzman, who represented DeLorean in the federal drug-trafficking trial in Los Angeles which ended in acquittal on all charges, has said he expects DeLorean to be indicted here.

Acting U.S. Attorney Joel Shere declined to comment.

DeLorean, accompanied by Weitzman, returned home last week to appear before a federal grand jury which has been at the forefront of a federal probe into alleged DeLorean Motor Co. financial irregularities. The probe began more than 2½ years ago and has focused on $17.65 million which disappeared from the sports-car project as well as a laundry list of other alleged frauds.

Grand jury proceedings are secret, but DeLorean's appearance led to informed speculation that the feds here are finally close to concluding the probe.

The U.S. Attorney's office here, in keeping with federal rules of criminal procedure, has steadfastly refused to even confirm the existence of the grand jury. However, witnesses who have testified before the grand jury and motions to quash grand jury subpenas have verified the probe's existence.

DeLorean's visit last week concerned his unwillingness to surrender certain corporate documents which were subpenaed by the grand jury, according to sources familiar with the probe.

In addition to spending time in the grand jury room, DeLorean and his attorney also appeared behind closed doors before U.S. District Judge Thomas P. Thornton, who is overseeing the grand jury, indicating the possiblity of some legal maneuvering.

"There is the possiblity that there could be a contempt citation filed if DeLorean does not surrender all of the subpenaed documents," one source said. "That could well mean that any possible deal would be eliminated."

There are several reasons why DeLorean might consider plea bargaining despite Weitzman's insistence he is being framed. First, it could limit his legal exposure to other charges.

Second, it would save money. Third, it would avoid a courtroom crap shoot in front of a jury.

Finally, there is the matter of the U.S. Attorney's record here. Former U.S. Attorney Leonard Gilman, who died Feb. 12, told this reporter in a late 1982 interview that 85 percent of all people charged by his office plead guilty. Of those who don't plead, about 80 percent are convicted, Gilman said at the time.

DeLorean, who also reportedly spent time in Grand Rapids to visit his publisher and work on his forthcoming autobiography, faces a myriad of other litigation in addition to anything which might arise from the federal probe here.

He has been named as a defendant in several civil suits brought by DeLorean Motor Co. creditors and others.

DeLorean also was sued for divorce by third wife Cristina Ferrare. Ferrare, a model and West Coast talk show host, was at one time a DMC director and also has been named in civil litigation involving the defunct company.

AAA Michigan to offer auto leasing

DEARBORN.—Beginning April 1, AAA Michigan will offer cars through the Auto Club Leasing Co.

AAA members may lease any car thorugh this service but discounted rates are available on any of the 25 top-selling domestic vehicles, according to AAA.

Rosenfeld, Sirowitz & Lawson chosen

Yugo selects agency for its national ads

By John A.Russell
New York Staff Writer

NEW YORK—Yugo America appointed Rosenfeld, Sirowitz & Lawson as its national advertising agency last week.

The company has been searching for an agency and, according to William Prior, president of Yugo America, this agency had "the right balance" of talent and chemistry for the account.

Prior would not disclose the advertising budget but said it would be "sufficient millions" to get the job done.

Rosenfeld, Sirowitz & Lawson currently bills $140 million and has such account as Champion Spark Plug, Charles of the Ritz, Chase Manhatten Bank and several association accounts for MacDonald's.

Both Ron Rosenfeld and Len Sirowitz are alumni of Doyle, Dane, Bernbach , where both worked on the Volkswagen account during that company's launch of the Beetle.

As for Yugo America, Prior said the initial rollout of cars will be in the Northeast, from Boston to Baltimore, with the remainder of the country following.

The company intends to import 70,000 cars the first year and increase that to 150,000 in the second year. The first cars are expected to arrive in the U.S. in the summer.

This is a change from the original target date of spring, but Prior said lead times for some suppliers as well as as insistence on high quality-control standards extended the time.

Final production dates are now being worked out with Zastava, the manufacturer in Yugoslavia, but Prior said, "We are in absolutely good shape."

As for advertising, John Salven, senior vice president of marketing for Yugo, said the company is looking for a "breakthrough campaign" but it is too early in the process to reveal any creative details which are still under discussion.

McLernon busy since leaving top VWoA post

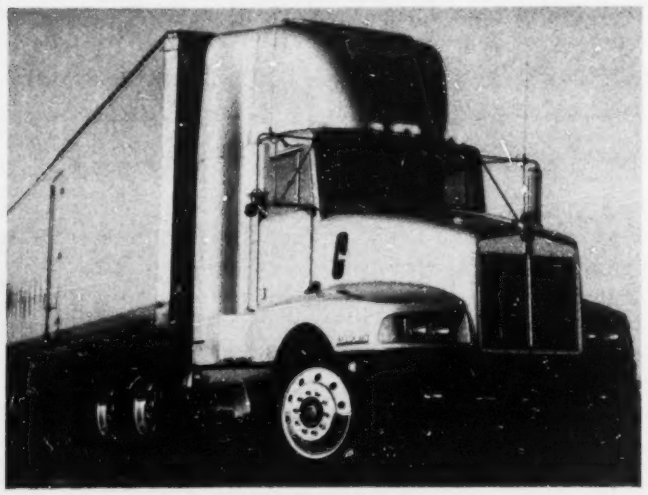
DETROIT.—James W. McLernon isn't one to stay idle. The fact is, he's kept quite busy since his departure in September, 1982, from Volkswagen of America, Inc., where he served as the company's first president and chief executive officer.

Since then, McLernon, 57, has kept active as a board member of the Pontiac State Bank, a lecturer at the Flint campus of the University of Michigan and as consultant to various Detroit area firms.

McLernon, who spent 27 years with General Motors prior to joining Volkswagen in 1976, currently is concentrating his efforts as consultant at Creative Industries of Detroit, Inc., which he describes as a "mini conglomerate" comprised of 11 companies whose activities range from art and graphic services to development engineering.

Headquartered in Detroit, Creative includes Chevrolet Corvette engineering and prototype making among its automotive jobs.

truck industry news



New Kenworth conventional bows

Kenworth Truck Co. has introduced a new aerodynamically improved conventional—the T600A—which it says can increase fuel efficiency by 22 percent over standard conventionals.

New Kenworth model geared to fuel saving

LOUISVILLE.—An increase of 22 percent in fuel economy over a standard conventional can be anticipated by operators of the new Kenworth T600A, company officials said at demonstrations of the aerodynamically tuned Class 8 vehicle at the Mid-American Trucking Show here.

Aerodynamic improvements received top priority in the new truck's design, optimizing fuel efficiency without requiring the customer to specify optional add-on aero packages, according to Roger Sackett, Kenworth Truck Co. product planning director.

"Since about 75 percent of a tractor-trailer combination's total aerodynamic drag is caused by the truck's front profile, extensive attention was focused there," he explained.

"The hood was sloped, corners rounded, fenders swept back and headlights tucked into the contours of the hood-and-fender assembly. The new bumper, of lightweight polyurethane, also was designed to reduce drag further."

Other standard aerodynamic aids include a new roof fairing with adjustable trim tab to accommodate different trailer heights, streamlined side-body panels and an integral cab-extender system that helps close the gap between tractor and trailer, a major cause of turbulence.

Kenworth estimates that a typical driver of the T600A should be able to save more than $25,000 in projected fuel costs over a seven-year period. The new conventional will be available in April, Sackett said.

During the winter, two non-professional drivers drove two T600As in "real-world" conditions from Phoenix to Miami, a distance of 2,346.1 miles, to demonstrate the vehicle's performance

Eaton, Clark slate venture on transmissions

CLEVELAND.—Eaton Corp. is planning to form a joint venture with Clark Equipment Co. to produce and market medium-duty truck transmissions.

Under provisions of a letter of intent signed with Clark, Eaton will acquire 50 percent of the portion of Clark's Brazilian operation that produces medium-duty truck transmissions and 50 percent of Clark's U.S. truck transmission distribution operation.

The letter of intent further calls for Eaton to assume majority control of those operations by 1987, and total control by 1991.

The transaction is subject to negotiation of a definitive agreement between Eaton and Clark and approval by both companies' boards of directors and any necessary governmental reviews and approvals.

Dana Corp. filed a lawsuit in U.S. District Court against Eaton and Clark, alleging, among other things, that the proposed joint venture would violate antitrust laws.

Clark called Dana's allegations in the suit groundless.

The joint venture provides that Eaton and Clark will manufacture medium-duty truck transmissions in Brazil for sale in Brazil, the U.S., Canada and Mexico.

Robert W. Gillison, president—Truck Components Group, Eaton Corp., said the addition of the medium-duty transmissions will complement Eaton's existing truck component leadership positions in medium and heavy-duty axles and heavy-duty transmissions.

'94 diesel regulations a shock

Industry girds for EPA rules

By Arthur Flax
Assistant Truck Editor

Heavy-duty diesel engine makers are apparently prepared to develop the technology to meet new EPA emission standards for 1988 and 1991, but they say the severity of the 1994 regulations is a complete surprise and may be extremely difficult to meet.

Some suggest the requirements are based on an unrealistic projection of growth in diesel truck use and could have been made less stringent without harm to public health.

The new rules specify a reduction in oxides of nitrogen emissions and the introduction of particulate (soot) limits in 1988, with further cuts in particulate emissions in 1991 and 1994 for diesel trucks over 8,500 pounds GVW.

The regulations differ from the standards EPA had proposed earlier in that they specify a less-stringent NOx limit, and a more-stringent particulate limit.

According to Linas Gobis, an MVMA staff engineer, it is easier to reduce particulate emissions when NOx limits are higher.

However, Kelly Brown, manager of emission control planning for Ford Motor Co.'s Safety and Engineering Staff said the 1994 particulate limits are so low, no tradeoff on NOx limits will make them easy to meet.

He said the 1988 emission levels are reasonable, the 1991 particulate levels were expected but will require new technology, and the 1994 particulate levels "boggle the mind."

"The test," he said, "will be to see what happens in 1991 to get a better idea of what will happen in 1994."

Jim Lawrence, manager of compliance and recall for Volvo-White Truck Corp., said of the 1994 particulate standards, "I'm not sure it's really a necessity in trucks. With the EPA emissions model, there was some question as to the need for levels that low."

He added, "When you look at the EPA figures for total pollutants, if the market is that good in 1991 and 1994, we'll all be wealthy people."

Engine makers, however, have little choice but to accept the new

Kenworth offers free $550 warranty

KIRKLAND, Wash.—Kenworth Truck Co. offered the Cummins 400,000-mile extended engine protection plan on any Kenworth-equipped Cummins 400-HP engine model ordered by March 31 and built by the end of May.

The "COMPUCHEK Protection Plan," a computerized preventive and diagnostic aid designed to increase revenue miles, normally sells for $550.

Retarder hits the spot

George Poulos, right, of Western Engine Co., Addison, Ill., presents a plaque to Pepsi-Cola General Bottlers' John Shehan at Elk Grove, Ill., marking delivery of the first tractor-trailer equipped with a transmission output retarder. The truck, a GMC Top Kick single axle tractor, is equipped with a Caterpiller 3208 diesel engine and Allison MTB 643 automatic transmission-equipped output retarder. The retarder, now operating on many buses and medium and heavy-duty trucks, provides up to 80 percent of the vehicle's braking requirements.

Year off to fast start as registrations climb

Ford again led all truck makers in registrations and gained on International for the lead in heavy trucks as the industry began 1985 with increases in all three market segments.

According to R.L. Polk & Co. statistics, 334,126 trucks were registered in January, a gain of 18.3 percent over the year-earlier 282,389.

Ford's 90,908 January registrations led number two Chevrolet by 7,892 units. Last January, 84,758 Ford trucks were registered, 3,528 more than Chevrolet's year-earlier tally.

Both Ford and Chevrolet, however, lost market share. Ford registrations represented 27.2 percent of the industry, down 2.8 percentage points from its year-earlier 30.0 percent share. Chevrolet registrations represented a 24.9 percent share, down 3.9 percentage points from its year-earlier 28.8 percent share.

Number three Dodge increased its January market share to 11.3 percent on 37,774 registrations, up 2.2 percentage points from its year earlier 9.1 percent on 25,671 tallies.

January registrations of light trucks tallied 313,204, 17.1 percent more than the 267,449 units counted a year-earlier.

Group 1 registrations in January totaled 211,866, up 41.8 percent from the year-earlier 149,444. Group 2 had 98,500, down 14.8 percent from 115,574, and Group 3 numbered 2,838, up 16.7 percent from 2,431.

Medium-truck registrations in January tallied 4,811, up 55.0 percent from 3,104 a year-earlier.

In Group 4, 66 units were registered in January, compared with the year-earlier 61. In Group 5, 452 units were counted, compared with 175 during the previous January, and in Group 6, 4,293 units were recorded, up 55.0 percent over the year-ago figure of 2,868.

Heavy-truck registrations totaled 16,111 in January, up 36.0 percent from the year-earlier 11,845. Group 7 registrations totaled

Proton Saga output slated for July

Malaysia to build a 'national' car

By Richard Feast
European Editor

LONDON.—The first glimpse of Malaysia's forthcoming national car has been provided by the company which plans to sell it on the U.K. market next year.

Proton Saga emerges as a lower-medium four-door sedan. It is based on the mechanical components or the Mitsubishi Lancer —front-drive, 1.3 or 1.5-liter engine—but distinctively styled.

The car will go into production at a plant built for that purpose near Kuala Lumpur this July. This is less than three years after the project was announced in October, 1982.

It will mark the emergence of another low-cost-base Southeast Asian country as an auto producer in its own right, though Malaysia's stated ambitions are not as far-reaching as those of South Korea or Taiwan.

The main purpose of the government-backed Proton project is to satisfy the domestic market needs. To that end, Malaysia has begun increasing the tariffs on imports of CKD kits, and Prime Minister Mahathir Mohamad hinted earlier this year that quotas may be introduced as well.

The aim is to achieve 70 percent of a 150,000-unit market by the early 1990s. Given the Proton plant's capacity of 120,000 a year by 1995, this will not leave many for export.

Mainland Investments, based in Warrington, has been appointed concessionaire for the U.K., Ireland and other English-speaking markets in Europe (Malta and Gibraltar). Malaysia, like those countries, requires right—hand—drive.

Harry Knoop, deputy chairman of Mainland Investments, and fellow director Frank Spilsbury were the first overseas visitors to tour the 360-acre plant at Shah Alam, near Kuala Lumpur. They will return for July's ceremonial startup.

Proton is an abbreviation for Perusahaan Outomobil Nasional. The company, capitalized at $65 million, is 70 percent owned by Heavy Industries Corp., of Malaysia (Hicom). Its partners are Mitsubishi Motors Corp. (15 percent) and Mitsubishi Corp. (15 percent).

Investment totaling $245 million is going into Proton. It will include stamping, automated body assembly and what is described as a revolutionary paint process.

With engines and drivetrains imported from Mitsubishi, initial local content will be around 42 percent, but the plan is to increase this significantly as production grows.

Only 5,500 will be built this year, followed by about 19,000 in 1986. After that, Proton is scheduled to grow rapidly to reach about 85 percent of capacity by 1991.

Malaysia's vehicle market has been expanding steadily in the 1980s and is now in the region of 110,000. Growth rates of 8 percent are forecast into the 1990s.

Nissan products, assembled by the wholly Malaysian-owned Tan Chong and Sons, are market leaders with just under 30 percent. Toyota, assembled by Sejati Motor and owned 15 percent by the Japanese company, has about 22 percent. Other local assemblers include companies producing Mitsubishi, Honda, Mazda, Ford, Daihatsu, Peugeot and Fiat.

The Saga of Malaysia

First picture of Malaysia's national car project known as Proton Saga. The car is locally styled and based on mechanical components from the Mitsubishi Lancer. It goes into production in July in a new factory near Kuala Lumpur.

AutoWorld reopens in May

FLINT.—AutoWorld is slated to reopen May 24. The entertainment center closed Jan. 13.

Nissan 200-SX subtly changed; starts at $8,999

CARSON, Calif.—Nissan's 1985 200-SX features improved handling and performance and subtle design changes—including elimination of the hood scoop on the turbo model.

The 200-SX is offered as a hatchback coupe with a 1.8-liter, turbocharged four-cylinder engine and as both a hatchback and notchback coupe with a 2.0-liter normally aspirated engine. Deluxe and XE trim levels are available on both styles, and a digital equipment package is available on the XE.

Suggested base prices range from $8,999 for the Deluxe notchback coupe to $12,349 for the Turbo hatchback model.

All 1985 Nissan 200-SX models are equipped with a fully independent rear suspension, four-wheel disk brakes and larger P195/60R15 low-profile, high-performance tires. The suspension features semi-trailing-arm links and front and rear stabilizer bars.

The normally aspirated versions are available in 5-speed manual or 4-speed automatic transmission with locking torque converter, while the turbocharged model is offerd with the 5-speed only.

Nissan 200-SX for '85

Nissan's 1985 200-SX is offered as a hatchback coupe with a 1.8-liter, turbocharged four-cylinder engine, above, and as both a hatchback and notchback coupe with a 2.0-liter normally aspirated engine. Hood scoop has been eliminated on the turbo model.

Motor vehicle board raises license fee

SACRAMENTO.—The California New Motor Vehicle Board raised from $150 to $200 the fee which new-vehicle dealers must pay for issuance or renewal of a state license for branches of their dealerships.

State law provides that dealers and other licensees under jurisdiction of the board must be charged fees sufficient to finance all of the board's activities.

movers and shakers

General Motors

William C. Brooks has been appointed general director of personnel administration on the General Motors Personnel Administration and Development Staff. He succeeds **James L. Lewandowski,** who has been named human resources vice president for GM's Saturn Corp.

William C. Brooks

Brooks, 51, was named gerneral director of personnel and labor relations for GM's Delco Moraine Division in 1982 and is currently enrolled in the advanced management program at Harvard Business School.

He has been with GM since 1973 and has served in a number of personnel assignments. Before joining GM, he was with the U.S. Departments of Labor and Defense and the Office of Management and Budget.

Saturn Corp.

James L. Lewandowski, 47, has been named human resources vice president for Saturn Corp., a General Motors subsidiary. He has been general director of personnel administration for the GM Personnel Administration and Development Staff since 1984.

Lewandowski joined Cadillac in 1955, moved to the GM Central Office in 1967 and went to Oldsmobile in 1974. He was Oldsmobile personnel director from 1978 to 1984.

Chrysler Corp.

Chrysler Corp. has named **John F. Knutson** director of international programs, a newly established position. He is responsible for initiating new international programs, assisting Chrysler organizations with continuing international programs and coordinating activities between the company and its components outside North America.

John F. Knutson

Knutson formerly was an executive with the Corporate Strategic Planning Department. He joined Chrysler in 1968 and also has served with Chrysler de Mexico as deputy managing director and finance director.

Chevrolet

Chevrolet has named **Robert D. Cenedella** manager of the Southeast region. He replaces **Thomas R. Mason,** who now is marketing manager for passenger cars at Chevrolet central office.

Cenedella formerly was Atlanta zone manager. He has been with Chevrolet since 1953 and also has served as customer service director for the Southeast region.

Jack R. Croft succeeds Cenedella in Atlanta, and **Malcolm E. Norris** replaces Croft as New Orleans zone manager. Norris formerly was director of national distribution and planning.

Croft joined Chevrolet in 1949 and was Indianapolis zone manager before going to New Orleans. Norris, with the division since 1955, was director of field operations in the distribution department before his most recent assignment.

Ford Motor Co.

David W. Scott has been appointed executive director—public affairs for Ford Motor Co. He succeeds **William Sheehan,** who will leave the company July 1 to pursue other activities, including an association with Executive Television Workshop, a New York-based communications company.

David W. Scott

Scott, 44, joined Ford in 1967 and has served in a number of public relations posts, including public affairs vice president for Ford of Canada and director of the International and Diversified Products PR office. Since 1981, he has been director of the North American public affairs office.

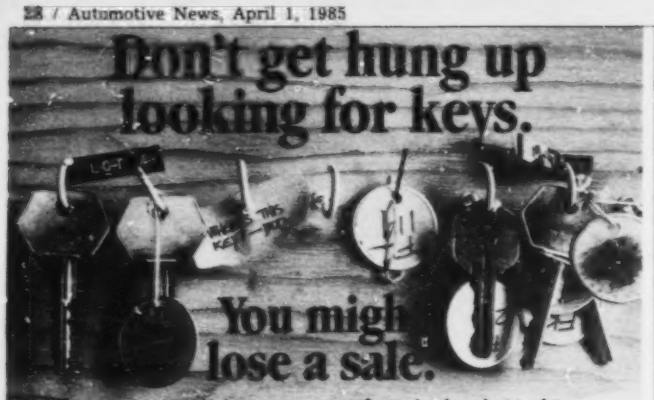
Sheehan joined Ford in 1978 as general public relations manager after serving as senior vice president—news for American Broadcasting Corp.

New governor picks used car

JEFFERSON CITY, Mo.—Here's a switch: Missouri's new Republican governor rode in a used car in his inaugural parade, while the state's Democratic lieutenant governor was whisked about in a luxurious Zimmer.

Gov. John Ashcroft and his wife Janet picked a 1968 Mustang convertible for the parade because they rode in it four years ago when Ashcroft took his oath as attorney general a second time.

On the other hand, Lt. Gov. Harriett Woods was chauffered in a $75,000 burgundy Zimmer convertible from Riley Chevrolet, of Jefferson City.



Even if you're losing sales while your sales staff is hunting for keys, let Supra get you off the hook with Supra Max.® It keeps your sales staff on the lot selling, and it keeps your vehicles secure.

With the Supra Max,® your key remains safely with the vehicle. Only our Title Key,® which can not be duplicated, can open the Supra Max.® This one-key system eliminates losses, duplications, and confusing key boards. It's also the toughest and most durable automotive key box on the market.

So if you want the best key boxes made, give us a call about the Supra Max® and our other styles of auto key boxes. They'll keep your sales staff on the lot selling.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma, 1984: from manufacturers' sales records. Oklahoma '83 figures not available.

1984 total is 10,118,231; domestics pace gain

Year's registrations best since '79

By Jenny L. King
Detroit Reporter

Registrations of new cars, domestic and imported, reached their best total in five years in 1984 and catapulted 13.38 percent over the final 1983 figure.

Table on Page 35.

Statistics compiled and reported by R.L. Polk & Co. reveal increases in 1984 for both domestics—up 17.46 percent—and imports—up 2.65 percent. The total of 10,118,231 was up 13.38 percent from 8,924,186.

Domestics numbered 7,595,704 last year compared with 6,466,829 in 1983. Imports added to 2,522,527, up from 2,457,357 the preceding calendar year.

The 1984 total was 30.48 percent ahead of 1982 when registrations amounted to 7,754,342. It was the best year since 1979 when 10,356,695 was the final tally.

Market-share shifts from 1983 to 1984 included a generous gain for Ford Motor Co. with smaller advances for General Motors and Chrysler Corp. Imports lost 2.61 percentage points year to year, American Motors was down 0.28 percentage points and miscellaneous domestics disappeared to 0.00 percent from their former 0.01 percent of the total market.

Ford wrote the success chapter of the year in the ongoing registrations saga with its handsome coup of 2.15 percentage points. Ford finished the year with 19.26 percent of the total market compared with 17.11 percent in 1983.

GM was up 0.43 percentage points, to 44.44 percent from 44.01 percent and Chrysler finished the year up 0.32 percentage points, to 9.51 percent from 9.19 percent.

Imports, hampered in their sales efforts by the restrictions placed on the number of Japanese-built cars entering the U.S., lost market ground as the domestics completed a strong sales year in 1984. The imports were held to 24.93 percent of the total, down 2.61 percentage points from 27.54 percent in 1983.

AMC, down slightly in numbers from 1983 to 1984, sacrificed 0.28 percentage points in the market, dropping to 1.86 percent from 2.14 percent, and miscellaneous domestics, down to 267 units from 617 in 1983, hadn't the strength to hold on to their former 0.01 percent of the market.

Excluding imports, GM earned 59.19 percent of the 1984 new-car market, Ford had 25.66 percent, Chrysler held 12.66 percent, AMC had 2.49 percent and miscellaneous domestics had none.

A year earlier, GM had 60.74 percent, Ford had 23.61 percent, Chrysler had 12.69 percent, AMC had 2.95 percent and miscellaneous domestics had 0.01 percent.

December, 1984, registrations of 822,721 were up a scant 0.77 percent from 816,414 a month earlier but were down 9.56 percent from 909,660 in December, 1983. Domestic registrations for the final month were down 1.58 percent from the preceding month and were down 10.84 percent from December, 1983. The totals were 598,315 last December, 607,933 in November and 671,079 in December, 1983.

Imports were down 5.94 percent year to year, to 224,406 from 238,581. Their share of the December market, however, was up as domestic numbers were down 10.84 percent. Imports claimed 27.28 percent of the total, up 1.05 percentage points from 26.23 percent.

Ford and Chrysler shared the winner's circle with the imports in December, Ford up 2.40 percentage points and Chrysler up 0.50 percentage points.

GM was off 3.14 percentage points, AMC dropped 0.81 percentage points and miscellaneous domestics failed to make the scoreboard either December although their sales were included in the totals: 13 and 23 for 1984 and 1983 respectively.

Imports claimed the largest segment of the market class total for the month, 27.28 percent. They were followed in size by intermediates at 24.84 percent, compacts at 17.66 percent, subcompacts at 11.25 percent, standards at 9.92 percent and luxury cars at 9.06 percent.

A year earlier the December market was dominated by intermediates at 26.60 percent, followed by imports at 26.23 percent, compacts at 17.11 percent, compacts at 12.15 percent, standards at 12.00 percent and luxury models at 5.91 percent.

Excluding imports, the December, 1984 market class breakdown had intermediates at 34.16 percent, compacts at 24.28 percent, subcompacts at 15.47 percent, standards at 13.63 percent and luxuries at 12.46 percent.

Mexico assigns production quotas

MEXICO CITY.—In line with the Mexican Government's embargo on the importation of vehicles and its strict control of the domestic auto industry, the Secretariat of Commerce and Industrial Development has announced automotive production quotas for 1985.

The quotas are: Chrysler—35,174 cars and 25,727 trucks; Ford—28,834 and 37,620; General Motors—24,000 and 35,400, and Renault—35,200 and 7,700.

More are: Nissan 48,000 and 14,000; Volkswagen—88,462 and 7,693; Fab. Autotransportes Mex.—3,100 trucks, and Diesel Nacional—7,008 trucks.

'84 count is 2,522,527, but market share dips

Import registrations set record

By Jenny L. King
Detroit Reporter

Registrations of new imported cars reached an alltime high in 1984 but the total was written in the shadow of a substantially reduced share of the U.S. new-car.

R.L. Polk & Co. figures for the 1984 calendar year show domestic new-car registrations up 17.46 percent, while imports were up just 2.65 percent. Consequently, the imports slipped to 24.93 percent of the market in 1984 from 27.54 percent a year earlier.

Record import penetration of 29.26 percent was reached in 1982, a year when domestic sales/registrations were bottoming out from a prolonged recession.

The record import total last year was 2,522,527 new cars, up 2.65 percent from 2,457,357 in 1983. That included market share increases for six of the top 10 importers, paced by a gain of 3.36 percentage points for Honda. The Honda numbers include all Accords built in this country as well as models imported from Japan.

Honda was up to 19.53 percent from 16.17 percent of the import total, pushing Nissan into third place from its accustomed second-place slot.

Toyota remained on top of the heap but only by some 12,000 cars and it lost 2.06 percentage points in market share, dropping to 20.00 percent from 22.06 percent.

Nissan lost 1.93 percentage points in 1984, Subaru was down 0.14 percentage points and Mazda was down 0.44 percentage points.

Volkswagen, whose totals include U.S.-built Rabbits/Golfs, was up 0.36 percentage points, Volvo gained 0.05 percentage points, Mercedes-Benz was up 0.07 percentage points, Audi was up 0.87 percentage points and BMW gained 0.33 percentage points.

The 10 leading makes claimed 89.33 percent of total import registrations, up from 88.86 percent in 1983.

December import registrations were off 5.94 percent but managed to increase their piece of the total market to 27.28 percent from 26.23 percent in 1983. Honda topped Toyota for the month—albeit by just six cars—and gained 2.88 percentage points over its standing the preceding year.

Toyota dropped 1.77 percentage points, Nissan was down 0.36 percentage points, Mazda was down 0.35 percentage points, VW was down 0.90 percentage points and Volvo was down 0.57 percentage points.

Subaru gained 0.50 percentage points in December, Mercedes-Benz was up 0.40 percentage points, BMW was up 0.08 percentage points and Audi gained 0.33 percentage points.

Ten makes accounted for 88.36 percent of the month's total, up from 88.12 percent a year earlier.

In a December to December comparison, West Germany and the U.S. increased their shares of the import market and Japan and Sweden were down. The West German segment increased to 13.58 percent from 12.23 percent and the U.S. climbed to 7.07 percent from 6.82 percent. Japan slipped to 72.25 percent from 72.97 percent and Sweden was down to 4.74 percent from 5.29 percent.

The U.S. category includes VW Golfs and Honda Accords assembled in this country.

Numbers of cars from exporting countries included:

	Dec. 1984	Dec. 1983
Japan	162,130	174,085
W. Germany	30,475	29,168
United States	15,857	16,275
Sweden	10,642	12,626
France	2,807	3,908
Great Britain	1,865	2,045
Italy	616	400
Ireland	14	74

Over a year's time the Japanese portion of the import market slipped to 72.16 percent from 76.50 percent. West Germany was up to 12.52 percent from 10.51 percent, the U.S. grew to 7.98 percent from 5.19 percent and Sweden was up to 5.13 percent from 4.82 percent. Numbers were as follows:

	12 Mos., 1984	12 Mos., 1983
Japan	1,819,122	1,879,787
W. Germany	315,709	258,270
United States	201,297	127,629
Sweden	129,311	118,438
France	31,572	47,608
Great Britain	18,077	15,912
Italy	7,089	8,715
Ireland	350	998

Imported trucks were up 34.98 percent for December and were up 50.16 percent for calendar year 1984. In December, the total climbed to 69,837 from 51,739 and included these registrations by make:

	Dec. 1984	Dec. 1983
Toyota	27,044	18,750
Nissan	17,753	11,894
Mazda	9,332	8,596
Isuzu	6,191	.....
Dodge Ram 50	.....	3,399
Others	9,517	9,100
TOTAL	69,837	51,739

Registrations for imported trucks 1984 vs. 1983 were as follows:

	12 Mos., 1984	12 Mos., 1983
Toyota	288,825	174,860
Nissan	194,414	132,088
Mazda	115,202	70,795
Dodge Ram 50	49,855	32,759
Others	95,737	85,067
TOTAL	744,133	495,569

Fifty years for Rinkel

Ralph C. Rinkel, right, Merit Chevrolet Co., Maplewood, Minn., receives a 50-year-dealer award from R.D. Burger, Chevrolet general manager.

Detroit energy-fraud case involves three dealerships

DETROIT.—A suburban auto dealership and its owner have been charged with energy fraud by the state attorney general while another has pleaded guilty to similar charges and a third heads for trial.

Gage Oldsmobile, Inc., Ferndale, has pleaded guilty to charges of attempted energy fraud as part of a plea-bargain arrangement.

The dealership and its president had been accused of hiring a Detroit contractor to alter the utility meters at the dealership.

Gage Oldsmobile must pay the $1,000 maximum fine, be placed on probation and donate $2,000 to the Salvation Army to help the poor pay utility bills.

Charges against company president Edward Anthony Gage Jr. as an individual were dismissed, allowing him to keep the dealership. General Motors could have canceled his franchise if he had been convicted of a crime punishable by imprisonment.

Meanwhile, Page Toyota, Southfield, and its president, Robert Vermeulen Jr., each were charged with two counts of energy fraud, a felony with a maximum penalty of four years in jail and a $2,000 fine.

Vermeulen is accused of paying $1,500 to a contractor to alter the electric and natural gas meters at the dealership. The local utility companies claim they were cheated out of more than $3,900 in utility payments in 1982 and 1983.

At the same time, Robert Mechigian, owner of Bob Saks Oldsmobile and Bob Saks Toyota, Farmington Hills, is scheduled for an April 15 trial on charges of energy fraud and conspiracy.

Mechigian is accused of referring William Jones, a Detroit contractor, to other businessmen to alter meters.

Jones pleaded guilty to conspiracy to commit utility fraud for fixing meters at Bill Cook Buick in Farmington Hills, Mich., in 1982 and was sentenced to probation after he agreed to cooperate in the investigation.

The contractor said a number of businessmen, including nine auto dealers, paid him up to $2,000 each to rig their gas and electric meters.

Sweden plans '83 U.S. air rules for '89 models

STOCKHOLM.—Sweden intends to introduce U.S. 1983 exhaust emission control standards for 1989 models while encouraging a voluntary changeover to cars with catalytic converters two years earlier.

Lead-free gasoline must be available throughout the country by July 1, 1987, and should be available in reasonable quantities for visiting German tourists, etc., by the summer of 1986.

This general intention was announced by the Swedish Ministry of Agriculture, together with the reservation that the entire plan stands or falls with the abilities of West Germany and the so-called "10 Club" (Canada and nine European countries) to agree along the same lines.

At the same time, Sweden turned down a government committee's suggestion for U.S. exhaust emission standards for light and heavy trucks. This issue will be investigated further, the government said.

Bank names Nay

WACO, Tex.—Sam H. Nay Jr., president of Waco Dodge Sales, Inc., has been named to the board of directors of Texas National Bank of Waco.

U-M unit counts 700 programs in transit research

ANN ARBOR, Mich.—The University of Michigan Transportation Research Institute devoted nearly 20 years to studies that helped lead to the passage of Michigan's new seat-belt law.

The Institute has conducted more than 700 transportation-related research programs totaling $64.2 million since its inception in 1966, and its studies are used by planners nationwide. Most programs deal with highway safety, and seat-belt use has been an issue of paramount concern to the U-M researchers.

Institute studies proving that belt use significantly lowers injuries and deaths in motor-vehicle accidents provided research findings that helped state lawmakers understand the benefits of seat-belt use, said James O'Day, Institute interim director and research scientist.

Several of the studies involved designing dummies that, when subjected to high-impact sled crashes, allow researchers to simulate the effect of collisions on the human body.

Researchers have also analyzed millions of police accident reports to determine injury statistics based on belt use.

Fireside C-P honored

SCHAUMBURG, Ill.—For the third consecutive year, Chrysler Corp. has recognized Fireside Chrysler-Plymouth and Imports (Chrysler-Plymouth-Mazda-Mitsubishi) as its top dealer in Illinois.

Focus on customer's emotions, specialist advises

Lost sales blamed on salesperson

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Most people buy a car within 72 hours of visiting their first showroom and 68 percent of the people who walk into a dealership are prepared to drive out with a new car.

Then why do most dealerships have closing rates of 15 to 18 percent? According to D. Forbes Ley, director of Sales Success Institute, the reason is the salesperson.

Ley, who conducts sales seminars for retailers of products ranging from personal computers to cars, said the reason closing rates are so low is that too much attention is focused on the product itself rather than on what motivates the customer to buy.

According to Ley, virtually all purchase decisions are made on the basis of want rather than need. A person may need something, but he has to want to buy it. As a result, the consumer is making an emotional decision rather than a logical one, Ley said.

He feels that if salespeople focus on emotions, the closing rate can be as high as 80 percent. And by focusing on emotional motivation, a salesperson really does not need to know as much about the product as he or she should about people.

"People do not have to know very much about cars in order to sell them," Ley said, giving the example of knowing about a car's horsepower.

A person does not want to know the technical aspects as much as what the product can do for him or her, he said.

Ley recommends the "hurt and rescue" technique. The hurt is reminding the consumer of the problem, i.e. a car that is in need of constant repair, and the rescue, selling the person a new car, is a way out of their predicament.

According to his theory, people fall into one of three categories when they fail to buy.

The first is "the perfectly happy now" person. Ley said this is outright rejection.

The second is a geniune objection—"this just won't work for me." Ley said many times, in this instance, the salesperson is doing too much talking and not listening to what the prospect needs or wants. "Little doubts create questions, big doubts lose a sale," Ley said.

The last category is the "I'd like to think this over." In this case, Ley said, the person is really saying "I don't want it enough to do anything about it."

Ley said all three of those scenarios are caused by the salesperson. While overcoming objections is one of the basic tenets of selling, Ley said avoiding objections is the real key to making the sale.

"Some people say 'I love overcoming objections, that's where the real selling begins,'" Ley said. "Even if you are the world's greatest salesmen, it's almost impossible to overcome some objections."

The goal, he said, is to avoid objections by having the person see the benefit in owning the product and making them want to buy.

"Every price is too high until they see the benefit," Ley said. "No price is too high when they see the value in owning it.

"The biggest thing in improving sales is approaching customers correctly," he said, adding that too often, dealership personnel literally attack prospects when they enter the showroom.

Ley said it is important to establish a rapport with the prospect, to chat for a couple of minutes and find out what they need and want.

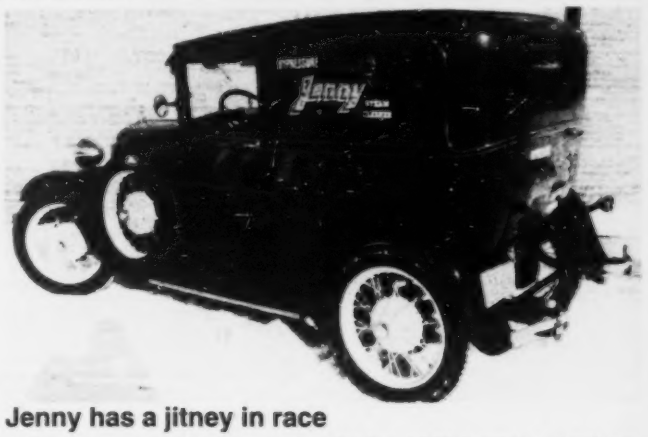
"Salesmen are driving them away," Ley said. "People want to slide into a situation. We are careful in how people approach us. By sliding in, in a non-threatening way, you can find out what they need, but more important, why that is important to them. Then you sell to that."

Japanese ship more cars here through loophole

WASHINGTON.—Japanese cars transshipped from Guam, the Virgin Islands and the Trust Territories and thus not counted as part of the Voluntary Restraint Agreement have been increasing steadily.

According to the Commerce Department, 20,334 units were transshipped from April, 1984, through December, 1984—the first nine months of the fourth year of restraints. The department uses date of export from Japan and thus its numbers are incomplete because of lag time for shipments in transit.

During the third restraint year— April, 1983, through March, 1984— the total was 9,394 units. During the second restraint year (April, 1982-March, 1983), 2,175 units were transshipped and during the first restraint year, none were.



Jenny has a jitney in race

Don Cross, of Chicago, will enter his 1929 Model A Ford Deluxe Delivery in the Great American Race, to begin June 24. He turned to a natural partner for sponsorship—the Jenny Steam Cleaner. By the time the Model A had been introduced in 1929, Jenny had already been in business two years, producing high-pressure steam cleaners. The race is a 3,300-mile time/distance rally between Los Angeles and New York. It is sponsored by Interstate Battery System of America.

Becker signs with Chevrolet

Steven R. Becker signs a Chevrolet franchise agreement for Becker Motors, Salem, Mo. Joining in the ceremony, from left, are: Don Wood, district sales manager; Jeffrey Hurlbert, zone manager, and Edward Johnson, assistant zone manager.

Japanese volume will reach 2.4 million here in '86

Drop in new U.S. car sales forecast

NEW YORK.—Following a strong first quarter, the pace of domestic auto sales will begin to slip in the second quarter of this year, according to a report by Merrill Lynch Economics, the forecasting group.

First-quarter estimates of sales and production have been raised, primarily because of incentive programs on domestic small cars.

But these programs are scheduled to expire by mid-April, and the payback effects will be felt in the second quarter, Merrill Lynch said.

In addition, relatively high consumer debt, slower growth in the economy, some decline in consumer confidence and the uncertainty surrounding potential tax reform legislation suggest that domestic auto sales will slip in the second and third quarters of 1985, the group said.

Projections for auto sales in 1985 remain unchanged at 10.2 million units for the total industry, with 7.6 million for domestic and 2.6 million for imports.

The projection for 1986 is total industry volume of 10.4 million units, with domestics at 7.4 million and imports at 3.0 million units.

When it was formulated, the import projection for 1985 assumed either continued restraints on the Japanese or elimination of the restraints, Merrill Lynch said.

But the projection of 2.4 million Japanese new-car sales for 1986, up significantly from 1.9 million units in 1984, assumed that restraints would be removed.

However, the projection also assumed that Japanese auto companies will continue to manage volume levels in the U.S., based on fears that quotas will be reimposed if the market is flooded with low-priced cars.

The import share will reach about 29 percent in 1986, the report said.

If economic activity remains as robust as in the first quarter of this year, domestic auto sales and production are likely to be several hundred thousand units higher than projected, the report said.

On the other hand, a stronger-than-expected economy in 1985 might result in more cyclical weakness in 1986 than is projected, Merrill Lynch said.

The net result would be that while about the same number of domestic cars would be produced and sold in the next two years, volumes for 1986 would drop more severely from 1985 levels than is now expected, the group said.

Projections for imports would be unaffected by slower economic activity, Merrill Lynch said, because of the unsatisfied demand for Japanese cars that was created by four years of restraints.

In addition, import sales are less susceptible to minor fluctuations in economic activity, because the total import market (including European) tends to be more upscale than the domestic, the report said.

Award for Iacocca

NEW YORK.—Chrysler Corp. Chairman Lee Iacocca has been named to receive the William F. Harrah Automobile Foundation Award by the International Motor Press Assn.

DRI/McGRAW-HILL ANNOUNCES THE PUBLICATION OF A TIMELY AND TELLING STUDY THAT EVALUATES THE INTERINDUSTRY IMPACTS OF REMOVING THE CURRENT JAPANESE AUTOMOBILE VOLUNTARY RESTRAINT AGREEMENT.

LIFE AFTER THE CURRENT JAPANESE VOLUNTARY RESTRAINT AGREEMENT:

WINNERS AND LOSERS

ISSUE 1:

HOW WILL JAPANESE AUTOMOBILE PRODUCERS RESPOND TO THE EXPIRATION OF THE CURRENT VOLUNTARY RESTRAINT AGREEMENT?

ISSUE 2:

HOW WILL INCREASED JAPANESE AUTOMOBILE IMPORTS IMPACT U.S. AUTOMOBILE PRODUCERS AND AFFECT DOMESTIC ECONOMIC ACTIVITY?

ISSUE 3:

HOW WILL MORE IMPORTS AND LESS DOMESTIC PRODUCTION AFFECT THE OUTPUT AND EMPLOYMENT LEVELS OF THE MAJOR AUTOMOBILE SUPPLYING INDUSTRIES?

FOR MORE INFORMATION, CONTACT DEBIE McNEILL AT (617) 863-5100, EXTENSION 3159, DRI/McGRAW-HILL

Makers jockey for position in heavy trucks

Continued from Page 18

5,625 in January, up 39.4 percent from the year-earlier 4,034 tallies, and Group 8 registrations numbered 10,486, up 34.2 percent from the year-earlier 7,811 count.

International again lead heavy-truck registrations, followed closely by Ford, but there was some jockeying for position among Mack, GMC, Peterbilt, White and Kenworth.

In January, 3,488 International heavy trucks, representing a 21.65 percent market share were registered. A year-earlier, International's 2,593 registrations represented a 21.89 percent share.

Ford's 3,386 January registrations represented a 21.02 percent market share, up 1.15 percentage points from the year-earlier 2,354 tallies and 19.87 percent market share.

International again led Group 8 registrations with 2,540 tallies to Ford's 1,324. Ford led Group 7 registrations with 2,400 tallies to International's 1,248.

Mack passed GMC for third place in heavy registrations, 2,025 to 1,989.

Kenworth, which held sixth place in 1984 heavy registrations, fell to eighth place in January. Peterbilt, which held seventh place, moved up to sixth place, and White moved up a notch into seventh position.

R.L. Polk's January truck registrations did not include the District of Columbia, as those figures were delayed. New York and Oklahoma registrations were compiled from manufacturers' sales records.

under the EPA regulations. Comparing the increase in cost due to emission controls installed by the factory and the cost of the emissions test with current modification and test cost cost of $3,500 results in a lower cost of direct imports of about $1,700 ($3,500 minus $1,800 equals $1,700).

Finally, President Reagan has demonstrated that he has no tolerance for artificial trade barriers. Witness the decision to drop the voluntary restraints on Japanese imports and the Duracell decision where he reversed the International Trade Commission in its decision to restrict imports. We believe that the Administration understands that direct imports provide a critical price-adjusting function that will result in benefits to American buyers.

AICA is raepidly moving forward to implement self-policing in the direct import industry that meets all of its obligations for safety and emissions compliance. We believe that this self-policing will take away the arguments by the opposition that this industry is not responsible or capable of being policed.

We believe that some of the auto makers will attempt to maintain their price structures and seek changes to U.S. laws to ban direct imports and, sooner or later, that effort in and of itself will cause a focus on price structure protection.—**Benjamin R. Jackson,** Executive Director, Automobile Importers Compliance Assn., Washington.

Chevy dealer makes a million for charity

ST. LOUIS.—Johnny Londoff, North County Chevrolet dealer, made a million—not in the auto business but as chairman of the Variety Club Telethon.

Pledges totaled $1,219,349 and will benefit more than 100 children's organizations. Among the performers were Sammy Davis Jr. and Tony Bennett.

Closer link for manufacturing, engineering, planning

Betti promoted in Ford revamping

Continued from Page 1

substantial consolidation of power under Betti. The new job gives him responsibility for the company's long-range planning, research, design, engineering and manufacturing of new products. A new Engineering and Manufacturing Staff, reporting to Betti, has been created to involve manufacturing in the product-planning, design and engineering process.

He will also oversee the Marketing, Purchasing and Supply and Environmental and Safety Engineering staffs. In addition, a spokesman said, the company's Alpha project, Ford's clean-sheet small-car program, will report to Betti through Herr.

According to Ford Chairman Donald Petersen, the changes mean "responsibility for identifying consumer needs, generating new technologies and concepts that address those needs, and evolving appropriate product designs, related manufacturing processes and marketing strategies will be coordinated from within a single organization."

The move emphasizes the kind of philosophical shift characterizing U.S. auto makers today as they gear up for long-term competition with less-costly production sources overseas. Coordination of manufacturing and engineering is a fundamental part of the movement to build cars faster and more efficiently and is a centerpiece of the various high-tech small-car projects.

Auto analyst Arvid Jouppi called the new organization a response to GM's various steps toward cost efficiencies, including the company's Saturn project, implementation of Japanese manufacturing features and acquisition of Electronic Data Systems to streamline corporate communications.

"Ford is now formalizing its response in that it is drawing manufacturing and engineering functions under one head," said Jouppi. "Ford is formalizing an organization to capture these advanced manufacturing techniques."

Reporting channels have been altered in the reorganization. The Design, Purchasing and Supply and Marketing Staffs will now move directly to Betti. The Design and Marketing Staffs, which previously answered to Ford President Harold Poling, will report to Betti, who in turn reports to Poling.

Purchasing and supply activities will now answer directly to Betti. They formerly moved to Betti through James Bakken, vice president, Operations Support Staffs, whose job description was altered last week. A company spokesman said Ford's Alpha project, headed by Henry Nida, will report to Betti through Herr.

John A. Betti

Frederick Z. Herr

• Betti, 54, joined Ford in 1962 after 10 years as an engineer with Chrysler. He was elected a vice president at Ford in 1975 and has held various engineering and manufacturing positions with the company's North American and European operations.

He was promoted to executive vice president of Technical Affairs last fall, replacing Louis R. Ross, who was appointed executive vice president of North American Automotive Operations. Betti became a Ford Motor director in February.

Herr, 59, has been general manager of Ford's Electrical and Electronics Division since Jan. 1, 1981. He has been with the company since 1956, holding various supervisory and management jobs within Ford's engineering and manufacturing organizations.

As vice president for engineering and manufacturing, Herr will have four principal operations reporting to him—engineering, manufacturing, advance manufacturing and engineering and product and technical planning.

Product and technical planning is a new operation responsible for recommending advanced-concept priorities and supervising evolution of vehicle and powertrain concept programs.

W.R. Wilkinson has been appointed executive director of product and technical planning. He formerly was executive director of product strategy development.

Donald F. Kopka continues as vice president for design, Lionel M. Chicoine as vice president of purchasing and supply and B.J. Coughlan as executive director of the Marketing Staff.

Bakken's title has been changed to vice president for operations support services, overseeing plant engineering, product quality and statistical methods. He also is responsible for pulling together companywide efforts in the area of computer-aided engineering design and manufacturing.

Ford announced last week that Frank E. Macher will succeed Herr as general manager of the Electrical and Electronics division. Macher has been vice president of Northern Pacific Operations at Ford Asia-Pacific.

Jaguar profits up sharply; BL slips deeper into red

By Richard Feast
European Editor

LONDON.—Jaguar reported a pre-tax profit of 91.5 million pounds ($105 million) for 1984, an increase of 83 percent over 1983.

It is the first time in 18 years the company has reported its results as an independent unit. It followed last summer's sale of stock and Jaguar's separation from the state-owned BL group.

At the same time, the former owners remained in the red. BL, which had expected to break even in 1984, saw its deficit increase by 9 percent to 73.3 million pounds ($84 million). There were declines in sales (3.4 billion pounds, $3.9 billion), production (490,000) and unit sales (511,000).

However, there was a mood of confidence at Jaguar, whose results were revealed just two days after BL's. "By any standards, it was a successful year," said John Egan, chairman and chief executive.

Sales rose 34 percent to 634.1 million pounds ($729 million) and production increased 19 percent to 33,437.

Jaguar said the performance reflects continuing strong demand for its products, an ability to supply efficiently and the strength of the dollar.

Jaguar has no outstanding debts of any significance and is sitting on "quite substantial" cash reserves, Egan said. It spent 38 million pounds on capital investments last year and will put up to 50 million pounds this year and up to 60 million pionds next year into the business.

"Remember, in the 1970s, Jaguar was spending one, two, three million on ivestments," Egan said.

But the main Jaguar thrust is now coming in West Germany—"the home of our major rivals," as Egan frequently comments. The company expects to sell about 2,500 cars there this year, compared with 1,950 last year. But that will not be the ceiling, as 65 percent of all luxury-car sales in Europe are in West Germany.

Company officials were evasive about the introduction date of the XJ40, the replacement for the current Series 3 sedan. Egan confirmed it will not be this year, but unofficial reports suggest the launch has been put back from the spring to the fall of next year.

While demand for present models remains high, Jaguar is taking the time to perfect the new model. It is under no pressure to introduce it, and it is aiming for standards of refinement and reliability beyond anything that has been achieved in the U.K.

Jaguar also estimates that 25 percent of the shares issued last year are held in the U.S. through banks' American Depository Receipts (ADRs).

It's spring and U.S. roads have 56 million potholes

By Jake Kelderman
Washington Reporter

WASHINGTON.—It's enough to bring a smile to any alignment man.

The Washington-based Road Information Program estimates that there are as many as 56 million potholes in U.S. roads today, an average of 29 for each mile of American pavement.

Based on the group's survey of state highway engineers, Ohio leads the nation with nearly 6.9 million of the troublesome indentations, followed by Pennsylvania with 3.9 million, South Carolina with 3 million and Tennessee and Florida with 2.2 million each.

If everyone were so inclined, it would cost approximatly $308 million to eradicate the roadway acne, the Road Information Program estimates. This is based on a per-pothole cost of $5.50 for material, labor and equipment to fill it.

Donald Knight, RIP executive director, said the "potholes signal the arrival of spring and offer graphic proof that our roads are in trouble."

"These are not pinholes we are talking about,"Knight said, noting that the average pothole measures about 1½ feet wide and almost half a foot deep.

Potholes develop when water seeps into roadbeds, freezes and expands. In the spring, when the ice melts, the covering of cavity left below the road surface collapses under the weight of passing vehicles, leaving holes in the road that can, at worst, wreak havoc with auto suspension systems.

The transportation research group estimates that about 19.7 million tons of material will be used this year to fill most of the holes at a cost of $224 million.

Michigan acts to ease fund snag on Mazda plant

Continued from Page 1

mitment.

"The VRA never has and does not now have any influence on Mazda's project," he said.

He said the expected 25 percent increase in Japanese imports would provide insufficient volume for Mazda, which was limited to 170,000 units in the final year of restraints. The company's U.S. dealers have long maintained they could double sales in the U.S. if supplies were available.

The Flat Rock plant will be capable of turning out 240,000 units annually. However Mazda is negotiating to sell part of the plant's output to Ford Motor Co., which owns 25 percent of the Japanese company.

Construction of the Flat Rock plant is scheduled to begin this spring. Production is due to begin in the fall of 1987.

U.S. car sales climb 18 pct. for mid-March

Continued from Page 3

estimated sales of 3,000, down 36.84 percent from 4,750 (down 43.94 percent daily rate).

Chrysler, which not too many years ago was regularly earning less than 10 percent of the domestic market, held 16.08 percent for mid-March this year, up from 12.17 percent in 1984. Ford earned 27.51 percent, up from 23.63 percent.

GM plunged to 52.90 percent from 60.27 percent. AMC was down to 1.10 percent from 2.05 percent. VW earned 0.96 percent compared with 0.84 percent a year earlier, and Honda was up to 1.45 percent from 1.04 percent.

Mid-March brought strong sales gains for Chrysler and Ford products and ups and downs for GM. Plymouth was up 62.52 percent over last year, Chrysler was up 51.37 percent and Dodge was up 55.42 percent.

Mercury was up 12.07 percent, Lincoln was up 17.27 percent and Ford climbed 52.41 percent.

At GM, Buick was down 9.06 percent, Cadillac was up 25.20 percent, Chevrolet was up 0.72 percent, Oldsmobile was up 0.62 percent and Pontiac rose 29.17 percent.

Estimated AMC sales of 300 Eagles were down 68.42 percent from 950 while Renault was down 28.95 percent. VW had a 34.70-percent increase, and Honda was up 65.49 percent.

The top-selling nameplates in mid-March were led by Ford Tempo at 17,935. Second was Oldsmobile Cutlass Ciera at 12,785, then Chevrolet Cavalier at 11,729, Ford Escort at 10,368 and Chevrolet Celebrity at 10,289.

Week's total highest since Jan. 12

Year's car output tops 2 million

By Louise Kertesz
Detroit Reporter

U.S. auto production passed the two million mark last Monday (March 25), barely a day ahead of last year.

By week's end, the total was expected to reach 2,181,490 units, a pace running about even with (up 0.58 percent) last year's 2,168,972 assembled last year at this point.

Last week's targeted production of 183,935 cars was the highest since the week ended Jan. 12, when 185,560 cars were built. Overtime contributed to the high output.

Last week's total was 6.87 percent more than the previous week's 172,116 and 1.19 percent more than the year-ago week's 181,765.

Companies shared last week's scheduled car production as follows: General Motors, 59.74 percent; Ford Motor Co., 18.12 percent; Chrysler Corp., 16.74 percent; American Honda, 2.05 percent; American Motors, 2.04 percent; Volkswagen of America, 1.09 percent; Nissan Motor Mfg. Corp., U.S.A., 0.18 percent, and New United Motor Mfg., Inc., 0.04 percent.

Nissan reported its first weekly production of Sentras last week at its plant in Smyrna, Tenn.

GM scheduled two overtime shifts Saturday (March 30) at the following plants: Pontiac; Detroit; Arlington, Tex.; Doraville, Ga.; Fairfax, Kans.; Framingham, Mass.; Janesville, Wis.; Lakewood, O.; Leeds, Mo.; Linden, N.J.; Lordstown, O.; Oklahoma City, and Orion Township.

One shift was scheduled Saturday at GM's plant in Wentzville, Mo.

Ford also scheduled Saturday overtime at its plants in Lorain, O., and Dearborn.

Daily overtime is scheduled at the following Ford plants this week (April 1): Atlanta, Chicago, Dearborn, Kansas City, Lorain (O.) and Wixom (Mich.).

Honda's Marysville (O.) facility was scheduled to work eight hours Saturday and six overtime hours during the week.

Chrysler's Belvidere (Ill.) and Jefferson (Detroit) assembly plants were scheduled to work two overtime shifts Saturday.

The Belvidere, Newark (Del.) and St. Louis No. 2 plants are also scheduled to operate two nine-hour daily shifts this week.

Goodyear asks suppliers to help with quality goals

AKRON.—At a meeting with 150 of its suppliers, Goodyear management requested their help in achieving quality and uniformity goals.

"Quite frankly, Goodyear is now at the point where its own strategy is being limited by the materials or equipment being pruchased from its suppliers," said Goodyear President Tom Barrett.

"Our own studies and experience over the past decade have led us to the inescapable conclusion that eventually we must get all our suppliers on the same perfection program."

Goodyear's manufacturing philosophy has changed in recent years. A major factor in that change has been the company's adoption of a perfection strategy employing statistical methods for the control of its manufacturing processes.

Goodyear said its first order of business in achieving its new objectives was to get the capital investment needed for the undertaking and establish the commitment of top management.

With its program in place, Goodyear next had to address an equally critical part of the equation: Supplier adoption of perfection strategies and quality assurance programs.

At stake for the suppliers is whatever slice they hope to win of the $5 billion Goodyear spends yearly in purchases. At stake for Goodyear, Barrett said, is "unquestioned worldwide supremacy in the tire business and in other market niches we choose to carve out."

After asking the suppliers to accept the challenge, Barrett offered help from Goodyear. The company, though its manufacturing training division, is conducting a series of statistical applications workships for its suppliers.

Instructors include Harold Haller, founder and president of Statistical Studies, Inc.

Those attending the workshops receive an introduction to statistical process control and the use of basic statistical tools. Further instruction focuses on the use of control charting, detecting changes in process, calculation of process capability, how to interpret variable control charts and how to evaluate variable control chart applications.

Truck production for year stands 7 pct. above '84

Domestic makers scheduled production of 68,967 trucks last week, about the same (down 0.44 percent) as the previous week's 69,270, but 6.83 percent more than the year-ago week's 64,560.

Year-to-date, 847,431 trucks have been assembled, 6.98 percent more than the 792,133 built last year at this time.

General Motors scheduled two overtime shifts Saturday (March 30) at its Baltimore plant.

GM's Moraine (O.) plant scheduled work on Saturday as a makeup day.

Ford Motor Co. also scheduled Saturday overtime at its Twin Cities plant.

Ford has scheduled daily overtime this week (April 1) at its plants in Loraine, O.; Wayne, Mich. (Michigan Truck); Kansas City; Norfolk; Twin Cities, and Louisville.

Chrysler Corp.'s Warren (Mich.) plant is scheduled to work two nine-hour daily shifts this week (April 1).

Downtime hurts; Canadian output at 12-week low

Canadian car makers scheduled their lowest production in 12 weeks last week: 14,679 units, 28.88 percent below the previous week's 20,766 and 39.05 percent lower than the year-ago week's 24,232.

Last week's total reflected the closing of American Motors' Brampton (Ont.) plant for two weeks for inventory adjustment (production is scheduled to resume April 8) and downtime at Ford Motor Co.'s Oakville (Ont.) facility which is converting to the 1985½-model Escort and Lynx.

So far this year, 245,551 cars have been built, 11.57 percent fewer than the 280,870 assembled last year at this point.

Makers expected to build 18,348 trucks last week, down a bit (1.38 percent) from the previous week's 18,605 but 8.58 percent more than the year-ago week's 16,898.

So far this year, 227,242 trucks have been assembled, 9.23 percent more than the 208,049 completed last year at this point.

Chrysler's Windsor (Ont.) plant scheduled production of 2,746 Plymouth Voyagers, 2,743 Dodge Caravans and 619 Mini Ram Vans last week, bringing this year's total T-115s to 73,385.

Adduci elected

DETROIT.—V.J. (Jim) Adduci, MVMA president, has been elected chairman of the National Commission Against Drunk Driving. Adduci succeeds John A. Volpe, former U.S. secretary of transportation, who becomes chairman emeritus.

Chrysler, Mitsubishi near accord on U.S. venture

By Marjorie Sorge
Labor Editor

Chrysler Corp. Chairman Lee A. Iacocca will discuss and possibly announce a joint venture with Mitsubishi to build vehicles in the U.S. while on a trip to Japan and Korea which begins this week, Automotive News has learned.

The new car would be a subcompact that would replace the Dodge Omni and Plymouth Horizon, which are due to be dropped for the 1988 model year. The major parts of the powertrain would come from Japan and the rest of the components would be basically sourced in the U.S., sources said.

It is also likely that Chrysler and Mitsubishi will build a new plant somewhere in the Midwest for the new car, although other sites have been discussed.

The setup could be similar to the General Motors-Toyota joint venture in California, which began producing the Chevrolet Nova late last year. GM and Toyota created a separate company in that venture.

Chrysler is holding discussions with Mitsubishi on a number of matters, but the company will not comment on any speculative reports, said a company spokesman.

It has also been reported in Japan that Chrysler plans to increase its shareholding in Mitsubishi from 15 to 24 percent as part of the company's plan to build cars in the U.S.

The spokesman declined to comment on that report.

While Mitsubishi has been talking about building its own plant in the U.S., it has been rumored that the company has been pulling back since General Motors announced its Saturn project.

Iacocca has said Chrysler's relationship with Mitsubishi, which is now 16 years old, will be even closer in the future.

Chrysler currently sells three Mitsubishi cars, the Conquest, Vista and Colt, and a Mitsubishi truck, the Ram 50. Chrysler buys 2.6-liter four-cylinder engines from Mitsubishi and has an agreement to buy a three-liter V-6 from the company for the 1987 model year.

The Mitsubishi V-6 engine will be in the 1987½ minivans, the new A-car will get it in 1988½, the C-car in 1987½ or 1988 and the Imperial will offer it in 1989, sources said. The A-cars are compacts, the C-cars are full-size.

Under the Voluntary Restraint Agreement, Chrysler was getting 87,500 cars annually from Mitsubishi, but Iaccoca has said the company wants up to 200,000 more now.

Chrysler has looked at its Belvidere (Ill.) plant as a possible location for building the joint-venture vehicle, but sources said it is not the most likely candidate. Belvidere is scheduled to build the Dodge Omni and Plymouth Horizon through 1987.

The new P-car was to be built in that plant, but Iacocca cut pro-

Spying on the Sprint

Jim Dunne

Two more doors

Chevrolet will offer a four-door version of the Suzuki-built Sprint this fall. The price is not available; however the 1985 two-door hatchback model is priced at $5,151. The new hatchback will be sold in the same nine Western states as the two-door.

Barriers spawn congressional demand for retaliation

Japanese trade issue heats up

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The fallout generated by Japan's decision to export more cars to the U.S.—while failing to remove barriers to U.S. products—continued on Capitol Hill last week.

As the White House was moving to play down Japanese intransigence in ongoing trade negotiations, the House on Tuesday speedily passed a resolution urging President Reagan to take retaliatory action against Japanese imports. The measure, approved 394 to 19, was a milder version of a Senate resolution passed a week earlier.

Trade pressure also intensified in the Senate, as the Finance Committee passed—in bill form—the resolution approved earlier by the full Senate.

The action prompted immediate moves by the Japanese to defend their world-trading record and to assure the U.S. that market-opening measures were underway.

Japanese officials pointed to the high U.S. dollar and huge federal budget deficits as sources of American noncompetitiveness in Japan. Cultural differences were also cited, while market-opening measures already implemented were pointed out.

But Senate Commerce Committee Chairman John Danforth, Missouri Republican, and Senate Finance Committee Chairman Robert Packwood, Oregon Republican, countered Japanese claims.

The senators said that whatever the excuse, the U.S.-Japan trade imbalance was unacceptable and that Japanese trading practices are a problem even for nations whose currency is undervalued against the yen.

Although the opening shots of what some have described as a U.S.-Japan trade war coincided with Japan's announced 24 percent increase in auto shipments to the U.S., protection of American auto production has not been a primary issue among lawmakers bent on retaliation against Japan.

Rather, the focus of congressional anger has been Japan's reluctance to open its markets to U.S. agricultural, medical and high-technology goods—areas where Congress believes the U.S. is clearly competitive.

Domestically based U.S. auto makers stand to be shaken up by an allout trade war with Japan because their access to Japanese components or vehicles could be restricted. Japanese-based U.S. auto makers could also find themselves in a similar situation, but to a far more vulnerable extent.

Lawmakers contend, however, that their purpose is to avert such drastic measures. Talk of restrictions on auto parts, with the possible exception of electronic components, has not been a subject of the debate thus far.

Although the Senate resolution—and its bill counterpart—tie Japan's market-opening measures to the increase in Japan's U.S. car sales over the next year, many members of both the House and Senate expressed dissatisfaction with this linkage and criticized the domestic industry.

Complaints were leveled against expected price increases

Domestics top 2 million; imports also gain

Sales up 2 pct. for first quarter

By Jenny L. King
Detroit Reporter

At the end of the first quarter, it was domestic car sales up 2 percent, imports up 2 percent and the industry healthy and heading into the spring selling season.

Breaking the two-million mark, domestic new-car sales pushed 2.38 percent ahead of the year-ago figure with Chrysler Corp., Honda and Ford Motor Co. propping up sales declines reported by General Motors, Volkswagen and American Motors.

Domestics numbered 2,042,164, up 2.38 percent from 1,994,609 a year earlier. It was their highest first quarter since 1979 when 2,184,569 units were reported, just prior to a plunge that would last four years.

Import first-quarter sales, hanging on to 22.77 percent of the total U.S. market (compared with 22.80 percent in 1984), totaled 602,132, up 2.24 percent from 588,966.

Total industry sales of 2,644,296 were up 2.35 percent from the year-earlier 2,583,575.

As the domestic auto makers lined up to report their numbers, market shares were changing and Honda replaced AMC as fourth-highest in sales in the first quarter. Chrysler Corp. sales were up 26.80 percent, to 303,151 from 239,069 and its share of the market expanded to 14.84 percent from 11.99 percent.

Honda sales of 41,747 were up 43.48 percent from 29,096 a year ago and they were a full 10,000 units ahead of AMC's 31,479 tally. Ford sales were up 6.97 percent to 521,939 from 487,929.

• GM dropped 3.72 percent in the first quarter, to 1,124,614 from 1,168,051. Volkswagen was off 8.25 percent, to 19,234 from 20,963, and AMC dropped 36.41 percent, to 31,479 from 49,501.

Chrysler's gain of nearly 3 percentage points in the domestic market was the most spectacular. Chrysler climbed to 14.84 percent from 11.99 a year earlier. Ford was up to 25.56 percent from 24.46 percent and Honda rose to 2.04 percent from 1.46 percent.

GM, unable since May of 1984 to break back into its favored spot above 60 percent of the market, finished the first quarter with 55.07 percent, down from 58.56 percent. AMC dropped to 1.54 percent from 2.48 percent and VW was down to 0.95 percent from 1.05 percent. Honda earned 2.04

breaking news

Camaro, Firebird to get Fiero technology

DETROIT.—The 1989 replacements for Camaro and Firebird will feature space frames and plastic body panels—technology developed by Pontiac for the Fiero. Sources described the new cars, being developed under the GM-80 (F-car) project, as downsized and extremely wedge-shaped.

Chevrolet launches truck incentive

DETROIT.—Chevrolet has inaugurated "Action Cash," an April 2-May 31 salesperson cash incentive on C/K trucks. The program features a computerized pull board with cash-award amounts of $75, $100, $300 and $500 and is patterned after a similar Ford program. Chevy also extended its 8.8 percent APR financing program on S-10 trucks until April 30 and extended the half-ton Work Ready program and 6.2-liter Diesel Days program through the end of the model year.

Hyundai sets dealer rule: No dualing

By Richard Johnson
Detroit Reporter

Hyundai Motor America, which will begin signing dealers early next month, has ruled out dualing for its U.S. dealership network.

In addition, the California-based U.S. arm of Korea's Hyundai Motor Co. will restrict sales to about 30 states, concentrating on the East and West coasts and the South, according to a company spokesman.

The Hyundai official said no date has been set for the company's U.S. launch, although he predicted a startup sometime next winter.

Hyundai's initial goal is to build 100,000 cars a year for sale in the U.S. The company hopes to have 300 dealers lined up by the end of 1986, but Bruce Matthias, national public affairs manager, said his "guess" is that about 100 franchises will be in place when

But Jaguar faces heavy fines

Credits to help firms with CAFE shortfall

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The bad news is that a number of auto firms are facing millions of dollars in civil penalties for failing to meet fuel economy standards, but the good news is that some have enough credits at hand to help them and may be able to borrow against the future.

In any case, they will have to pay nothing until the EPA decides in May, or possibly June, on the appropriate CAFE adjustment factor. EPA's decision is important because the adjustment could be retroactive to 1980 and could be carried forward.

In addition, EPA still has to make final reports on 1984 model sales which determines exact CAFEs.

Involved are both passenger-car and light-truck CAFEs and model years from 1983 to 1986 and later-model CAFEs now under NHTSA consideration. Also involved is the 1987-model light-truck CAFE soon to be announced. Both domestic and import companies are affected.

Jaguar is the only auto company (excluding small-volume firms like Rolls Royce) failing to meet the 1983 standard of 26 MPG. Jaguar's CAFE was 18.8 MPG and its U.S. sales were 12,639. Its shortfall (using $5 for each car for each one-tenth of an MPG under the standard) produces a fine of about $4,550,040, not counting some help eventually from EPA.

For 1984 models, Jaguar raised its CAFE to 19.0, still short of the standard of 27 MPG. Its U.S. sales that model year were 15,679, making its unadjusted shortfall equal to a fine of $6,271,600.

For 1985 models, Jaguar is reporting the same CAFE of 19.0 against a standard of 27.5 MPG. Using the company's projected volume of 19,999, the raw shortfall produces a fine of $8,499,575.

In a recent letter to Rep. John Dingell, Michigan Democrat, Transportation Secretary Elizabeth Dole said Jaguar is the only company DOT knows of that likely will be subject to penalties through model year 1985.

Though unsaid, this is because it is so far the only maker without carryforward credits and, because of its limited line in the U.S., it is the only one not able to make a case for carryback credits in future years.

A runnerup as another company in trouble over civil penalties is Chrysler in the light-truck area. The 1984 composite light-truck standard is 20 MPG; Chrysler CAFE is 18.4 MPG.

Although Chrysler has labeled confidential its 1984 light-truck production (under 8,500 pounds GVW) for the U.S., an estimate of that figure is 370,568 units (assuming 10 percent of its production is between 8,500 and 10,000 pounds GVW). That would translate to a fine of $29,645,440 but Chrysler has carryforward credits of $28.5 million. That would leave it with approximately $1,145,440 left to pay.

Chrysler, which complained bitterly when 1985- and 1986-model light-truck standards were lowered at the request of Ford Motor Co. (joined by General Motors), has said it will be first in line to pay its fines.

Chrysler has been meeting passenger-car standards handily and, in fact, has $286.2 million in carryforward credits for cars. While its reported and unadjusted CAFE for 1984 cars is 27.1 MPG, its credits are probably more than enough.

Ford, on the other hand, reports a 1984 CAFE of 25.1 MPG and its estimated penalties are around $195 million. But its carryfoward credits are about $123.5 million

Olds succumbs to power of . . . vidi, vici

Oldsmobile will cancel a TV spot which provoked a letter-writing campaign by students of Latin at two Virginia high schools.

The ad in question showed a man and his son riding in a Cutlass Ciera. When the son questions his father about the need to take algebra, the man replies that algebra is needed to design cars like the Ciera. When the boy asks the purpose of studying Latin, the man just shrugs.

"We received about 150 letters concerning the ad and all but about a dozen were from students at two high schools near Roanoke," said an Oldsmobile spokeman. "I don't know if it was a class project or what."

The students, from Cave Spring High School and Blacksburg High School, complained that the spot made the study of Latin seem irrelevant.

Oldsmobile wrote to the teachers and told them the division would study the ad. After a review, the division decided not to air the commercial after the 1985 model campaign ends May 15, the spokesman said. Oldsmobile notified the teachers of the decision.

One of the two teachers involved wrote a return letter thanking Oldsmobile for its interest and concern.

UAW to form group for Ford Alpha work

By Marjorie Sorge
Labor Editor

The UAW soon will form a group to begin work on Ford Motor Co.'s Alpha Project, according to UAW President Owen Bieber.

Alpha was one of the main topics covered by Ford Chairman Donald E. Petersen, who addressed a Ford UAW Council meeting in Dearborn last week. Petersen and other Ford executives also covered Ford's past, present and future project plans, including the Aerostar, Sable and Taurus, and future sourcing plans.

Rumors have been circulating that Ford is holding discussions with Mazda to import vehicles and that it is discussing buying into Fiat to beef up its European operations against a GM attack on the market.

Petersen said there are no new Mazda discussions and declined to comment on Fiat.

Alpha will be a new small car to compete with General Motors' Saturn and Chrysler's Liberty. Ford also took the UAW Council members to the design center to see future products, but the council did not see the Alpha since there is no Alpha car.

Both GM and Chrysler Corp. say they have protypes on the road, but those are not the finished product and it is unlikely the final cars will look anything like the protypes, said Peter J. Pestillo, Ford employe relations vice president. Consequently, it is not fair to make comparisons on the progress of the three companies, he said.

Only GM and the UAW have a formal joint committee working on the future product.

Petersen called the Reagan Administration's refusal to ask for a continuation of the Voluntary Restraint Agreement "a serious negative added to the equation." But, he said, it is too soon to make any long-lasting decisions on alternate production or sourcing until the situation shakes itself out.

There are currently moves in Congress to impose strict import restrictions on the Japanese which would affect all products. Bieber has been in Washington often in the past few weeks to push for those restraints.

According to Bieber, Ford made no announcement regarding moves to counter the imports.

Instead, the meeting was to fill the union in on the state of the company, which Petersen said is "extremely good," and to reaffirm the goal of improving Ford product quality and employe involvement programs.

"We have a renewed determination to give vitality to our company," he said.

"We recommitted to keeping Ford a major force in this industry, and we are committed to the maximum effort to enhance the livelihood of our employes."

Like GM and Chrysler, Ford is also embarking on a project to create an improved method of doing business in the auto industry. The Alpha Project is a study of all the company's business, Petersen said. Its goal is to create a product that is cost-competitive with overseas producers, he said.

The project was announced after Ford and the UAW reached an agreement last year. The UAW was then promised that it would be a part of the project.

The UAW and Ford have had preliminary discussions since then, said Stephen P. Yokich, UAW vice president and director of the Ford Department.

Aerostar van is $8,222, Ford says

Ford Motor Co. said last week that its Aerostar minivan will be priced at $8,222 when it goes on sale in late June. The wagon version will be $9,064.

The 1985½ Ford Escort and Mercury Lynx will go on sale in May with base two-door hatchbacks up $236 over the current cars. The base Escort will be $5,856 and the base Lynx will be $5,986.

Ford said the higher prices are due to a new engine and additional standard equipment. It assigned values of $108 to the 1.9-liter engine, $33 to low-back seats and $95 to power brakes.

The Escort L two-door hatchback will be $5,812, which is $64 less than the earlier model, and the Lynx L two-door hatchback will be $6,112, down $58.

Ford has notified its dealers that they may begin taking retail orders for the Aerostar and the 1985½ Escort and Lynx.

Production of the rear-wheel-drive Aerostar will begin in May at the St. Louis assembly plant. The Aerostar will have a 2.3-liter four-cylinder engine with EPA ratings of 26 MPG city and 30 MPG highway. A 2.8-liter V-6 is optional.

Aerostar vans and wagons will be offered in standard and XL versions. A premium-level XLT wagon also will be available.

In addition to the 1.9-liter engine, the 1985½ Escort and Lynx have new front-end sheet metal and aerodynamic headlights. Ford said those are the first significant visual changes in the cars since they were introduced in the fall of 1980 and 1981 models.

Production of the 1985½ models began March 18 at the assembly plants in Wayne, Mich., and Edison. N.J.

Shifts at Nissan seen as bid to hike market share

TOKYO.—Nissan Motor Co. will shuffle its top management in June in what some see as an effort to recover domestic market share and lay to rest labor problems.

Takashi Ishihara, who has served as president for the past eight years, will move to the more ceremonial position of chairman following the company's board of directors meeting in late June. Ishihara is the outgoing president of the Japan Automobile Manufacturers Assn. and recently helped negotiate the new quotas for auto exports to the U.S.

Katsuji Kawamata, chairman, will become counselor.

Ishihara will be replaced as president by Yutaka Kume, presently an executive vice president. Kaichi Kanao, also an executive vice president, will become vice chairman.

Despite Nissan's denial, observers see the management changes as a means of revitalizing Japan's second-largest auto company.

Nissan's market share in Japan has fallen for the past four years, dipping from 29 percent to 27 percent, while No. 1 Toyota Motor Corp. has increased market share from 37 percent to 41 percent.

Nissan's profit for the fiscal year ended March 31, 1984, slipped 26 percent, though results from the recently ended fiscal year are expected to be better.

Theme will be 'the best of both worlds'

Chevy Nova ads to mention Toyota

By Matt DeLorenzo
Los Angeles Reporter

TUCSON.—Chevrolet will use an ad theme touting the Nova as "the best of both worlds," when it introduces the car on June 13.

The initial marketing plans for the product of the General Motors-Toyota joint venture have been expanded to include an early launch in the 25 states not served by the division's captive imports.

Initially, only 500 to 600 dealers were scheduled to have the cars at introduction. However, production is coming on stream faster than anticipated at the Fremont (Calif.) assembly plant.

As a result, Chevrolet expects to have twice as many cars (about 6,000) on hand at announcement as originally planned.

Production numbers for calendar year 1985 have been bumped from 43,000 to 58,000. Robert Burger, Chevrolet general manager, said he expects to have Nova selling nationally sometime in 1986.

Currently, the division retails Suzuki-built Sprints in nine Western states, Isuzu-built Spec-

Seeking the biggest bang for the buck

Dealers get hints on advertising strategy

By Patricia A. Kelsey
Staff Correspondent

TAMPA.—Considering the fact that 85 percent of all ads are totally ignored by consumers, leaving a scant 15 percent to be noted, it behooves dealers to take a critical note of planned strategies and campaign execution to get the biggest bang for their buck.

Couple that with research that shows consumers are bombarded with some 1,800 sales propositions per day and it becomes readily apparent that advertisers must pick and choose their message vehicle with great care.

To help members of the (Tampa) Bay Area Chevrolet Automobile Dealers Assn. meet that challenge, representatives from the Radio Advertising Bureau, Television Bureau of Advertising and Newspaper Advertising Bureau gathered during a one-day seminar hosted by DynaMedia Advertising, Inc., Tampa.

Ray Avedian, vice president and Detroit manager of the RAB, said 1984 was a giant year for radio, with ads reaching $5.2 billion in sales, up 17 percent, with projections calling for $5.5 billion in 1985.

He referred to his medium as a very productive local sales force with 74 percent of all ad dollars invested in radio placed by local retail advertisers, including auto dealers, in contrast to newspapers attacting 50 percent and TV, 26 percent.

"Auto dealers across the country today invest $400 million a year in radio," Avedian said, "and dealers spend 24 percent of their total ad budget on radio, twice the average for local advertisers in general."

In terms of cost, while admittedly all media costs have risen between 1967 and 1984, radio went up the least—117 percent—compared with TV, up 198 percent; magazines, up 198 percent; outdoor, up 198 percent, and newspapers, up 200 percent. Averaged out on a cost-per-thousand basis, all media costs rose 172 percent.

Reasons for radio's popularity, Avedian said, are a one-on-one sales pitch that can target consumers most needed to reach, and 123 million car radios representing a huge ad medium.

"Ninety-five percent of all cars have radios," Avedian said, "providing a natural marriage between an auto dealer and the consumer riding in the car, fully aware of the vehicle's age and condition.

"The significance of radio advertising in this application is that it reaches your prospects while they are in the closed ambience, allowing your message to work in your favor," he said.

Another benefit of radio advertising, he said, is that radio, by its very nature, allows the consumer to listen with the ears and watch with imagination.

Conjuring up imagination increases consumer participation and involvement, both of which tend to increase retention time, something all advertisers seek, he said.

To get the most out of the advertising messages, Avedian told the dealers to make sure identification of the dealership is in place, to stress customer benefits, to be authoritative yet reflect sincerity, to avoid exaggerations and to establish individuality.

Richard A. O'Donnell, vice president—Detroit sales for the Television Bureau of Advertising, told the dealers they and their counterparts across the country invested $188 million in local TV advertising in the first nine months of 1984, a gain of 52 percent over 1983.

Attributes of using TV to convey the sales message include its capability of selling not only the item advertised by the retailer, but the retailer's image as well, O'Donnell said.

TV, he said, provides projection of a quality image, the same image which auto delers are using today to sell their product and to attract the investment spender.

"Of all the retailers that are benefiting from an improved economy, the automotive industry has rebounded the most," O'Donnell said, "and dealers who survived the recession are hitting on the quality image because customers have learned to look for value."

Because TV can sell the item and the image, auto dealers can interject item appeals such as low finance charges, year-end savings, no downpayment and overall savings while at the same time projecting an image that will stay with the viewer, he said.

"TV," he said, "has a better reach than other media and it is an affordable medium in that it is the most cost-efficent based on cost-per-thousand."

Hugh C. Quinn, vice president for automotive classified of the Newspaper Advertsing Bureau, offered more of an idea workshop for dealers, keying on elements of print advertsing.

He said the 10 basics for the auto dealer to follow to get his message across are:

1. Use a dominant graphic because the reader is attracted when a single element clearly dominates the ad.

2. Use a prominent benefit headline because that's what the reader is going to want to know first.

3. Use a simple layout, making sure the reader's attention is directed in a natural flow though the ad. Avoid making the reader hopscotch around.

4. Make the copy complete by including key information such as your hours, address and telephone number.

5. Be specific about details that influence buying decisions, such as model designations and standard and optional equipment, and spell out service and warranty information.

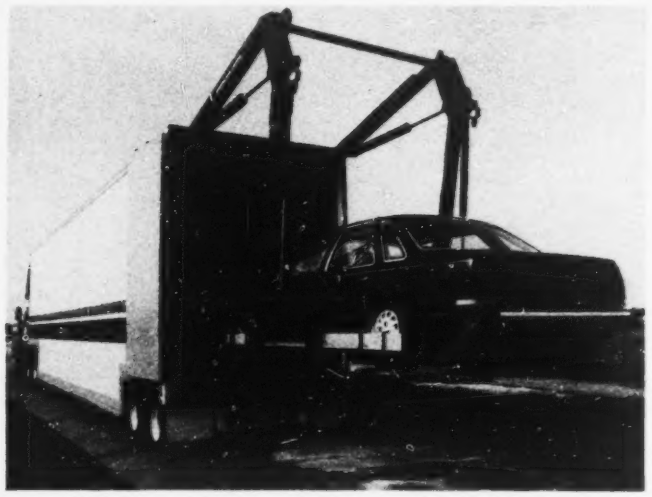
6. Stick to a recognizable style to build identity of your dealership.

7. Let white space work for you by not overcrowding an ad.

8. Price it right. The price or monthly payment in the ad can trigger action. At the same time, be clear about what the price does and does not include.

9. Make your ad ask for action by suggesting a test drive, "they're moving fast" or "buy today."

10. Work with the pros, either at an advertising agency or with professionals at the local newspaper.



Low-cost, fast, safe delivery

Ford Motor Co. is in a three-year pilot project shipping cars in enclosed trailers that are loaded and unloaded automatically as shown here. Ford says cars arrive damage-free in less time. Kansas City-Seattle delivery time is cut to five days from 17, for example, largely because railyard time is minimized and specific trains are used. Cars are positioned and lifting bars are placed. Then, a computer-controlled robot takes over and inserts cars. More automation is possible at assembly plants, and the system can be used for rail or highway delivery.

Ford tries enclosed trailers to cut car-shipping damage

By Roger Rowand
Engineering Editor

DEARBORN.—A Phoenix inventor believes he has developed a foolproof way of getting new cars from the assembly plant to the dealership without damage.

That would be quite a feat because now only five of every 100 cars arrive at their destinations without some kind of damage, according to one factory traffic manager.

The chipped and scratched paint, dents, dings, smashed glass and flat tires come from the weather, vandalism, road debris, theft and theft attempts.

Ford Motor Co. is expressing confidence in the inventor's ideas with a three-year pilot project that uses them.

In essence, the plan is to ship cars at low cost inside entirely closed trailers that have a computer-controlled robotic system that loads and unloads the cars.

In addition to damage avoidance, transit would be speeded because loaded trailers would be sent from the factory directly to specific freight trains, avoiding railyard delays, Ford said.

Using the new system in a test, it takes five days to deliver a load of cars to Seattle from Kansas City compared with 17 days the old way.

Dallas Smith, of Dallas Smith Property Brokers, Phoenix, is the inventor. Transportation Mfg. Corp., Roswell, N.M., a Greyhound Corp. subsidiary, is building 50 of the $40,000 to $60,000 trailers for the pilot project. Burlington Northern Railroad will ship the units during the test period.

When the system is geared up, eight cars can be loaded in one of the 48-foot trailers in 15 to 20 minutes, Smith said. A trailer can carry eight small cars, six large ones and mixed loads of both sized cars and Ranger pickups.

Louis E. Lataif, Ford vice president, sales operations, told Automotive News that dealers receiving cars in the trailers during tests have been delighted.

"This trailer is the missing link between the high quality we are building in at our assembly plants and the high quality sales and service provided by Ford and Lincoln-Mercury dealerships," Lataif said. "We are doing everything we can to ensure that no damage is inflicted on a car before the new owner receives it."

Fire hits L-M deal

SPRINGFIELD TOWNSHIP, Pa.—A fire at Sheehy Lincoln-Mercury in this Philadelphia suburb caused more than $200,000 worth of damage to the rear of the dealership building. The blaze began when a large air-compressor motor overheated and caught fire.

Torrington signs agreement to aid Chinese firm

TORRINGTON, Conn.—An agreement to provide technical assistance to Suzhou Needle Bearing Co., of the People's Republic of China, has been signed by a Chinese Government trade company and Torrington Co., a needle bearings manufacturer here.

Torrington will provide engineering and manufacturing expertise to assist Suzhou in modernizing its needle-bearing capabilities and operations.

The Chinese Government has selected Suzhou to become a world-class supplier, which requires the meeting of bearing design and production specifications set by the International Standards Organization.

Torrington will select for and sell to Suzhou equipment for bearing production and other related equipment. It also will train Suzhou employes in product design, tooling and inspection as well as the operation and maintenance of the purchased process equipment.

The agreement also includes the licensing of Suzhou to manufacture certain needle bearings of Torrington design.

Dealer Williams honored

FORT WORTH.—J. Roger Williams, president and general manager of Jack Williams Automall here, has been named Outstanding Young Man of the Year by the Fort Worth Jaycees for his involvement in the community.

Sees chance to sell 600 trucks

Saab sees potential for 600 Class 8 sales

Continued from Page 16

importers, except Volvo, compete in Classes 6 and 7.

He feels Saab's expertise in building and selling Class 8 models exclusively, coupled with a "very competitive price" to be announced at Boston on its trucks and the good fuel economy of its turbocharged intercooled engines will make it a formidable competitor here.

Overall, he considers only Mack and International Harvester direct competitors to the local, short-haul type of vehicles that his company plans to market here.

With reference to its cautious start, Doennig said, "We have to crawl before we can run."

But, he added, "We are not a small player. Don't be deceived by the volumes. If, at any time, we see greater progress than we anticipated, we will increase our quotas."

Initially, Saab will sign only Northeast dealers. That's where trucks can be most easily brought in from Scandanavia, Doennig noted, and it's also where trucking density is highest.

Next year, Saab plans to expand its dealer network geographically and to sign 25-30 dealers by year's end. It expects to be selling about 200 trucks by then. Doennig figures that 30 dealers are sufficient to handle a volume of about 600 units annually.

Scania, the parent company's truck and bus division, reported sales of 24,000 vehicles worldwide last year, up 25 percent from 1983. Of those, 21,793 were heavy trucks. Saab builds nothing smaller than a 36,000-pound GVW truck.

A breakout of Scania's sales shows that 21 percent were delivered in Scandanavia, with other Western European countries taking 45 percent. South America took 16 percent and Asia, Africa, the Middle East and Australia the balance.

Brazil is Scania's largest single market, with sales of 2,667.

Despite its far-flung marketing activities, Scania has taken its time entering the U.S. Doennig said it wanted to be 100 percent certain it would succeed here before getting underway.

He now feels the division has the right truck, the right engine and the right components to be successful. Saab used Australia, with geographic and climatic similarities to the U.S., to test its trucks prior to mapping out its U.S. program.

Doennig joined Saab-Scania in late 1984 after 29 years with Mercedes-Benz of North America. He had been with Mercedes' truck division since 1968. He expects to have 18 people working in the Scania division by the end of this year.

Unlike its buses, which are built in Connecticut, Scania expects to build all its trucks in Sweden. While the truck division will be housed in the same facility as buses, it will do only prep work there.

movers and shakers

General Motors

General Motors last week announced new assignments for two of its vice presidents—**Elmer W. Johnson** and **Marina v.N. Whitman.**

Johnson was named group executive in charge of the Operating Staffs Group. He succeeds William E. Hoglund, who recently was appointed president of Saturn Corp. Johnson will continue as GM general counsel.

Whitman was promoted to group executive in charge of the Public Affairs Staffs Group. She will continue as GM's chief economist.

Johnson will be responsible for the following staffs: Customer Sales and Service, Industrial Relations, Marketing and Product Planning, Materials Management and Personnel Development and Administration.

Staffs reporting to Whitman are: Environmental Activities, Industry-Government Relations, Public Relations and Economics.

Johnson, 52, joined GM in 1983 as vice president and group executive in charge of the Public Affairs Group and general counsel. He had been a partner in a Chicago law firm.

Whitman, 50, came to GM in 1979 as vice president and chief economist. She is a former member of the President's Council of Economic Advisers. She also has been a member of the Federal Price Commission and a professor at the Universitry of Pittsburgh.

GM also promoted **Michael E. Naylor** to executive in charge of corporate strategic planning. He has been general director of corporate strategic planning on the Ecomomics Staff since 1981.

Naylor, 56, joined GM in 1967 with what is now Detroit Diesel Allison Division. He has also served with the Transportation Systems Division.

Elmer W. Johnson

Marina v.N. Whitman

General Motors—CPC

Thomas S. McDaniel has been appointed to the newly established post of director of international and joint venture programs for the Chevrolet-Pontiac-Canada Group of General Motors.

His duties will include maintaining and expanding liaison efforts with Isuzu, Suzuki, Daewoo and New United Motor Mfg., Inc.

McDaniel has been director of international programs for Chevrolet since 1983. He joined Cadillac in 1966 and also has served with the GM treasurer's office and the Worldwide Product Planning Group.

Ford Motor Co.

Kenneth C. Merrill has been appointed executive director of business planning and trust management for Ford Motor Co. He replaces **Robert C. White,** assistant treasurer, who has retired after 35 years with the company.

Merrill will be responsible for administration of the pension fund and other trust investments and for capital financing. He has been executive director of business planning, Office of the Chief Executive, since 1980 and will continue to be responsible for business planning. He joined Ford in 1956.

MVMA publishes world data book

DETROIT.—MVMA has published the 21st annual edition of World Motor Vehicle Data, which covers production, imports, exports, registrations and sales of motor vehicles around the world in 366 pages of tables.

The $35 soft-cover book combines data from a wide variety of sources around the world, such as foreign government agencies, motor-vehicle-related trade organizations and private organizations.

New this year, MVMA said, is a section on vehicle exports by countries of destination of the major vehicle producing countries.

Celebrating silver

HOUSTON.—Charles N. Davis Jr., Chuck Davis Chevrolet, Inc., has received a 25-year-dealer plaque.

Domestics top 2 million; imports also gain

Sales up 2 pct. for first quarter

Continued from Page 1

percent, up from 1.46 percent in 1984.

Pontiac was the only GM make to report improved first-quarter sales. All Chrysler and Ford makes were up as was Honda, whose 43.48-percent climb was the biggest.

Plymouth was up 34.12 percent, Dodge was up 31.59 percent and Chrysler was up 13.94 percent. Lincoln sales were up 19.01 percent, Ford was up 7.93 percent and Mercury advanced by 1.28 percent.

Domestic sales for March continued to stay a short distance ahead of the preceding year. On a daily-rate basis, they were up for each of the three reporting periods (but down the first and third on a straight numbers comparison), finishing the month up 5.58 percent daily rate and 1.67 percent in actual numbers.

Import penetration of 20.75 percent was lowest for any month since April, 1984, and was more reminiscent of 1979-level penetrations.

Domestic sales in March totaled 768,927, up 1.67 percent from 756,303 the preceding year. Imports slipped 3.02 percent, to 201,341 from 207,619. The industry sum of 970,268 was just 0.67 percent ahead of 963,783 a year earlier.

Chrysler again led the Big Three with its 29.66-percent sales increase, based on sales on 115,729 vs. 89,253. Ford was up 11.49 percent, to 204,315 from 183,537. Honda climbed 49.88 percent, to 15,039 from 10,034 and VW was up 2.02 percent, to 7,233 from 7,090.

GM reported sales of 415,218 domestic passenger cars, a decline of 7.62 percent from 449,462 a year earlier, and AMC was off 32.14 percent, to 11,393 from 16,788.

GM plunged to 54.00 percent of the March domestic market from 59.44 percent 12 months earlier. Chrysler rose to 15.05 percent from 11.80 percent. Ford was up to 26.57 percent from 24.27 percent and Honda had 1.96 percent, up from 1.33 percent. VW stayed at 0.94 percent while AMC slipped back to 1.48 percent from 2.22 percent.

Mirroring their first-quarter sales accomplishments, all Chrysler and Ford makes were up in March as were Pontiac and Honda. VW joined the monthly winners, up 2.02 percent. Increase percentages included Plymouth, up 34.34; Chrysler, up 21.49; Dodge, up 32.73; Ford, up 14.75; Mercury, up 4.89; Lincoln, up 4.36; Pontiac, up 6.38, and Honda, up 49.88.

Lincoln-Mercury Division had its best March in six years and the month was the division's 25th consecutive one with a year-to-year increase.

March import sales included records for Jaguar, Saab and Volvo. Nissan outsold rival Toyota and its 38,985 sales were highest for any import even though they were actually down more than 9 percent from a year earlier.

With imports down to 20.75 percent of the market, the remaining shares in terms of size-class were as follows: U.S. intermediates, 26.67 percent; compacts, 21.17 percent; subcompacts, 14.41 percent; standards, 9.41 percent, and luxuries, 7.59 percent.

A year earlier, the month's market class comparison included: Imports, 21.54 percent; intermediates, 27.83 percent; compacts, 18.05 percent; subcompacts, 14.55 percent; standards, 10.67 percent, and luxuries, 7.36 percent.

The March, 1985, domestic market was comprised of 33.65 percent intermediate; 26.72 percent compact; 18.18 percent subcompact; 11.88 percent standard, and 9.57 percent luxury.

Third-period domestic sales were up 6.88 percent on a daily rate basis and down 3.81 percent in straight numbers. The March 21-31 tally dropped to 301,496 this year from 313,443 in 1984. With nine selling days this year compared with 10 a year earlier, the rates figured to 33,500 and 31,344, respectively.

For the period, GM was off 8.95 percent and earned 55.31 percent of the market. Ford dropped 2.92 percent and had 25.06 percent of the total. Chrysler was up 19.32 percent, with 14.33 percent of the market. AMC dropped 27.34 percent, earning 1.90 percent of the total. Honda, up 30.44 percent, held 2.17 percent of the whole, and VW, off 6.03 percent, had 1.23 percent of the market.

Where auto market was, March, 1985

GMAC to sell auto loans in securities mart

By Michelle Krebs
Financial Editor

General Motors Acceptance Corp. plans to float a package of auto loans as securities, representing its first move into the auto financing secondary market.

GMAC President Robert F. Murphy said GM's financing subsidiary is working with its underwriters to develop such a financing package.

Other financial institutions have been rumored to be contemplating similar moves. However, Marine Midland Bank and the investment banking firm, Salomon Brothers, Inc., were the first and only ones, so far, to pool car loans and sell them as securities.

In February, $23 million in Marine Midland auto loan contracts were placed with a private, institutional investor. A month later, $60 million worth were sold in the first public offering. Marine Midland plans further offerings, probably private ones, within the year.

"That's small for what we think we want to do," said GMAC's Murphy.

He said GMAC's package will differ from Marine Midland's in that the auto loans will remain on GMAC's books since the servicing of the loans is a profitable business.

Murphy sees great potential for the secondary market. For the auto and financial services industries, it ensures that money will be available for auto financing during economic downturns.

For the investor, it provides less of a risk than a mortgage security, since the terms is much shorter.

But March auto production trails last year's

1st-quarter output edges past '84

By Louise Kertesz
Detroit Reporter

U.S. auto makers scheduled production of 134,539 cars last week. The total reflected the closing of assembly plants for the holiday on Friday, April 5.

No Saturday overtime was scheduled for Saturday, April 6.

Last week's targeted output was 27.58 percent less than the previous week's 185,788, which was the highest production for any week so far this year.

The total for last week was 21.50 percent less than the year-ago week's 171,386.

Production for March—746,090 cars—was up 10.76 percent from February's 673,636 but was 4.81 percent below the 783,807 for March, 1984.

First-quarter output of 2,184,277 units was a bit higher (1.61 percent) than last year's 2,149,665 for the corresponding period and was the best production for any quarter since the second quarter of 1979, when 2,485,124 cars were assembled.

But so far this year, production of 2,321,191 cars has slipped 1.04 percent behind last year's total at this time of 2,345,694.

Companies accounted for last week's scheduled production as follows: General Motors, 59 percent; Ford Motor Co., 20.46 percent; Chrysler Corp. 16.43 percent; American Honda, 2.57 percent; Volkswagen of America, 1.19 percent; New United Motor Mfg., Inc., 0.18 percent, and Nissan Motor Mfg. Corp., U.S.A., 0.17 percent.

American Motors' Kenosha plant closed last week for two weeks for inventory adjustment.

Honda scheduled eight hours of daily overtime last week.

Daily overtime is scheduled this week (April 8) at Ford plants in Atlanta, Chicago, Lorain (O.), Dearborn, Wixom (Mich.) and Kansas City.

Two nine-hour daily shifts are scheduled this week at the following Chrysler plants: Belvidere (Ill.), Newark (Del.) and St. Louis (Nos. 1 and 2).

Chrysler's Jefferson (Detroit) plant is scheduled to operate two 8½-hour daily shifts this week.

Chrysler Financial, banks refinance $4.8 billion debt

DETROIT.—Chrysler Financial Corp. wrapped up an agreement with more than 200 banks and lending institutions to refinance its $4.8 billion of private debt.

"This new refinancing arrangement removes the last remaining restrictions on Chrysler Financial Corp. that resulted from Chrysler Corp.'s financial difficulties during the late 1970s and early 1980s," said E.O. Grote, Chrysler Financial president.

Effective April 1, the refinancing package includes a $3.2-billion initial two-year revolving credit agreement that matures March 31, 1987, with 181 banks worldwide. It also involves a $1.2-billion receivable purchase agreement that matures March 31, 1988 with 39 banks.

The agent for both agreements is Manufacturers Hanover Trust Co. Swiss Bank Corp. is co-agent for the revolving credit agreement.

"These facilities will provide ample backup for the $3 billion worth of Chrysler Financial commercial paper currently outstanding," Grote said.

In addition, the refinancing deal involves the continuation of $90.5 million worth of subordinated debt with two insurance company lenders and $20 million of senior debt with four savings and loan companies. The maturities extend to 1988.

In Canada, Chrysler Credit Canada, Ltd., has arranged a new revolving credit agreement with 13 banks totaling $325 million (Canadian). The agreement matures March 31, 1987.

A new receivable purchase agreement totaling $225 million (Canadian) has been negotiated with six banks. The agreement runs through Jan. 15, 1987.

Royal Bank of Canada is agent for both Canadian agreements.

Chrysler Credit Canada also has arranged for $20 million (Canadian) worth of 12¾ percent debentures with 23 holders.

Truck production for March best since May, 1979

Domestic truck makers scheduled production of 54,314 units during the holiday week, 21.66 percent less than the 69,335 built the previous week and 12.27 percent below the year-ago week's 61,913.

So far this year, 911,012 trucks have been assembled, 5.13 percent more than the 866,569 built last year at this time.

March output of 294,486 trucks was the highest output for any month since May, 1979, when 338,961 trucks were completed, and the best March production since 1979's 358,126 for the month.

First-quarter truck production of 865,296 units was 6.98 percent more than the 808,852 for the corresponding period last year and was the best output for any quarter since the second quarter of 1979, when 887,948 trucks were assembled.

General Motors' heavy-duty truck plant in Pontiac will be down this week (April 8) for one week to prepare for the processing of several orders that require special equipment, the company said.

The closing idles 700 employes.

No overtime was scheduled for Saturday (April 6).

All Ford Motor Co. truck plants are scheduled to work daily overtime this week.

Chrysler Corp.'s Warren (Mich.) plant is scheduled to operate two nine-hour daily shifts this week.

Month's output in Canada dips 24 pct. below '84

Canadian makers scheduled production of 15,935 cars during last week's short work week, 6.17 percent less than the previous week's 16,982 and 36.49 percent below the year-ago week's 25,089.

So far this year, 263,699 cars have been built, 14.83 percent less than the 309,621 completed last year at this time.

March production of 80,367 cars was up a bit (1.31 percent) from February's 79,326 but was 24.21 percent less than the 106,044 units built in March, 1984.

First-quarter car production of 244,564 units was down 14.88 percent from first-quarter 1984's 287,309.

Last week's scheduled truck output of 13,640 units was 27.29 percent less than the previous week's 18,759 and 21.97 percent below the year-ago week's 17,481.

Year-to-date, 241,293 trucks have been built, 3.83 percent more than the 232,400 completed last year at this time.

Truck production in March reached 78,110 units, 9.75 percent more than the 71,170 built in February and about even with (down 1.68 percent) the 79,441 built in March, 1984.

Output of 227,826 trucks during the first quarter was 5.68 percent more than last year's 215,575 for the period and the best quarter ever, beating the record 223,692 reached in the second quarter of 1984.

Chrysler Corp.'s Windsor (Ont.) plant scheduled production of 1,764 Plymouth Voyagers, 1,900 Dodge Caravans and 408 Mini Ram Vans last week, bringing the T-115 total for the year to 77,553.

Aerodynamic theme for Escort, Lynx

The 1985½ Escort (above) and Lynx, to be introduced May 2, feature flush, aero-style headlamps and a new 1.9-liter, four-cylinder engine that provides a 23 percent boost in horsepower and a 14 percent increase in torque. Story on Page 6.

Domestic inventory is 53 days

New-car supply declines

By Arthur Flax
Automotive News Staff

Supplies of domestic cars on April 1 fell to 53 days, from 59 days a month earlier, as the stockpile of vehicles dropped in the face of strong sales.

New domestic cars in stock totaled 1,572,998 on April 1. A month earlier, there were 1,603,527 cars in inventory and at the start of April, 1984, there were 1,579,155 units in stock, representing a 56-days supply.

The ideal supply is generally considered to be 60 days, however there were a number of hot-selling lines that dipped well below that figure.

Factory incentives were apparently responsible for the tremendous drop in Pontiac Fiero's supply. Days' supply of that model fell from 78 on March 1 to 36 on April 1.

Sales of Chrysler's small cars continue to benefit from factory incentives and supplies of those cars remain low. Days' supply of Horizon, Turismo, Omni and Charger models ranged from 25 to 35 days on April 1. Last month's supply ranged from 28 to 34 days.

Supplies of a number of Ford Motor Co. models dropped and the company's days' supply fell from 74 on March 1 to 56 on April 1.

Models for which the days' supply fell appreciably from March to April included the Ford Crown Victoria, LTD, EXP and Tempo and the Mercury Grand Marquis, Capri and Topaz.

Notable was the days' supply of the Ford Tempo. It was 18 on April 1, down from 58 a month earlier and was the second lowest in the industry. Honda supplies were the lowest at three days for the U.S.-built Accord.

Supply of the Mercury Topaz also fell, from 55 days on March 1 to 24 days on April 1.

Other cars for which the days'

Profits for Big Three will be second-best

By Michelle Krebs
Financial Editor

First-quarter profits for the Big Three auto companies won't break the records set last year, but they'll come in second.

Combined profits for the Big Three are expected to be $2.5 billion, according to estimates from auto analysts, compared with last year's combined $3.2 billion.

For General Motors, auto analysts have lowered their original forecasts, which could have resulted in GM breaking the best-quarter-ever record set in the first quarter of last year.

GM profits are expected to be shy of $1.2 billion, or $3.75 per share, compared with $1.6 billion, or $5.11 per share a year ago.

Arvid Jouppi, an independent auto analyst in Detroit, lowered his estimate from $5.75 per share to $4.50 per share because of GM's underscheduling of cars and lower market share, to which GM responded by offering financing incentives on some models.

GM is suffering from high project expenses and costs of its reorganization, which has taken more time and more money than expected, said David Bloom, of First Boston Corp. The increased costs cannot be offset by higher car prices, he added.

Scott Merlis, of Shearson Lehman Brothers, said model changeovers have required more engineering than anticipated at GM.

Ford Motor Co. is expected to earn about $830 million, or $4.50 per share, down from $897.2 million, or $4.90 per share, in the first quarter last year, which was Ford's best first quarter.

Analysts said Ford's performance may depend on how well it has done in the European market, which remains flat, and the currency losses associated with the strong dollar.

Chrysler's profits will be off from last year because the auto maker will pay taxes this year.

Chrysler is expected to earn close to $530 million, or between $4.25 and $4.50 per share. Net income in the first quarter last year was $705.8 million, or $5.64 per share, the company's best-ever first quarter.

Analysts' estimates varied from $3.70 per share to $4.75 per share because of questions regarding what tax rate Chrysler will apply to first-quarter earnings. Chrysler officials have said they will use a 28 to 30 percent tax rate for the year.

The Big Three will announce first-quarter earnings the week of April 22.

Comfort, convenience, testing involved

Passive-restraint changes proposed

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A flood of proposed changes in the passive-restraint standard—only six months later than the due date proposed by the Department of Transportation in its own calendar—has been cleared by the White House Office of Management and Budget.

These supplement the standard announced by Transportation Secretary Elizabeth H. Dole last July. The July announcement called for a phase-in of air bags or automatic belts but allows them to be rescinded if states with two-thirds of the nation's people adopt mandatory belt-use laws meeting certain federal criteria.

The new proposals, of major interest to manufacturers but too technical for the average consumer, involve mostly test procedures, measurements, vehicle types and kinds of anthropomorphic dummies.

The seat-belt comfort and convenience standard, however, is of great interest to motorists who have experienced a lost buckle, a chafed neck, or a slack belt which can be tightened only by opening a door.

This is the standard which former NHTSA head Joan Claybrook completed Jan. 8, 1981, and made effective for 1983 models. But with seven petitions for reconsideration pending and the Reagan Administration eager to reduce regulation, its effective date was first postponed until the 1984 model year and again postponed until the 1986 model year.

NHTSA is now proposing comfort/convenience requirements with certain changes for automatic belts for the 1987 model year while postponing some changes for manual lap/shoulder belts until the 1990 model year.

This would make some requirements coincide with the rest of Standard 208 which starts the phase-in of passive restraints at 10 percent of 1987 models.

Since that same standard would automatically wipe out the passive-restraint mandate if states with two-thirds of the population adopt mandatory belt-use laws, the manual-belt requirements may coincide with rescission of any automatic belt or air-bag mandate. The delay is because manufacturers may be phasing out manual belts.

Meanwhile, since the Administration wants belts that are comfortable to wear and convenient to use, it urges companies to install voluntarily as many recommended features as possible.

Had the Reagan Administration refrained from any action, a standard very similar to the one now being proposed for Sept. 1, 1986, would have been in effect—encouraging belt use—for two years already instead of two years hence.

Because NHTSA is concerned about using child-restraint systems with lap belts, it proposes that lap belts (or the lap part of lap/shoulder belts) can be locked to secure the child seat. An emergency locking device is also proposed for a lap belt used in conjunction with an air bag but not for one used with a shoulder belt.

Other proposals for the comfort/convenience rule include:

Changes in the convenience hook release for automatic belts; allowing tension-relieving mechanisms for automatic belts like the "window-shade" (even though they may be misused) so long as the owner's manual gives warning about their proper use; retaining the requirement of not more than 0.7-pound pressure on the chest for automatic belts, and changing slightly the latchplate accessibility requirement.

More proposals are: Making minor changes in requiring full belt retraction upon unbuckling; providing flexibility but still requiring visibility of belt hardware except for movable seats; opting for visual warning but not audible warning for problems with motorized belts, and exempting "walk-in" vans from certain requirements while still requiring belts to be in the vehicle.

In another action, NHTSA den-

breaking news

Senate slates fuel-economy hearings

WASHINGTON.—Hearings on fuel-economy standards have been scheduled for May 14 by the Senate Energy Conservation Subcommittee, chaired by Senator Don Nickles, Oklahoma Republican.

Japanese supplier locates in Michigan

DETROIT.—Yazaki Corp., of Tokyo, a multinational manufacturer of electronic automotive supplies, will construct a $10 million factory and office facility in nearby Canton Township, Mich. Yazaki representatives and Michigan state officials broke ground at the site on April 11. The new factory will employ about 150 full-time workers, including 100 persons now employed at American Yazaki's leased facilities in Livonia, Mich.

EDS agency comes to Detroit

DETROIT.—Dallas-based Bozell & Jacobs ad agency, which will handle the personnel recruiting ad campaign for General Motors' EDS unit, plans to open a Bloomfield Hills (Mich.) office to service the account. The campaign, designed to enhance recruitment for the computer systems company, will use radio and newspaper advertising.

Chrysler drops its lawsuit to halt GM-Toyota venture

By Richard Johnson
Detroit Reporter

Chrysler Corp. has dropped a lawsuit against General Motors and Toyota which sought to block the two companies' joint auto-producing venture in Fremont, Calif.

The move was widely viewed last week as a prelude to Chrysler's own auto manufacturing joint venture with Mitsubishi.

Provisions of the settlement include a reduction in the period of "active cooperation" between GM and Toyota to eight years, although the Fremont venture will continue in existence for the maximum 12-year-period.

GM insiders last week said the end of "active cooperation" means GM employes who are part of the venture, known as New United Motor Mfg., Inc. (NUMMI), will be pulled out.

The agreement also restricts GM to buying no more than 250,000 units annually from either NUMMI or Toyota for sale or distribution in the U.S. or Canada during the 12-year period. However, a GM source said the company had no plans to buy more than 250,000 cars annually.

Federal District Judge Thomas Hogan, of the District of Columbia, ruled last summer that Chrysler could sue GM and Toyota in an attempt to block the car-making venture. Chrysler had alleged the project would have a "devastating effect" on competition in the marketplace, noting that GM and Toyota are price leaders in their respective markets.

The case was scheduled to be tried before Judge Hogan beginning April 22. Both sets of attorneys refused comment beyond a statement released by the companies, but Washington observers attached significance to the cap on purchases from NUMMI and Toyota, and the reduction of "active cooperation" between GM and Toyota to eight years.

According to a joint statement released by the companies, GM and Toyota said they have discovered that the original 12-year period can be shortened to eight years and still provide the learning sought from the production of subcompacts in the U.S.

Industry observers in Detroit last week saw the announcement as confirmation of an Automotive News report (April 8) that Chrysler is about to announce a joint venture with Mitsubishi to manufacture cars in the U.S. Automotive News said the new venture would produce a subcompact to replace the Dodge Omni and Plymouth Horizon, which are scheduled to be phased out in two years.

Baron Bates, Chrysler vice president for public relations, denied that halting litigation is a prelude to a Chrysler joint-venture announcement.

"It has nothing to do with it," he said. "Our basic argument had to do with the size of the venture. Chrysler and Mitsubishi are smaller companies. If GM were to do something with Isuzi or Suzuki, we would have no objection. Bigness was the issue."

Bates said Chrysler dropped the suit because the company "had sought public debate on the issue and we had made our point."

Auto production at Fremont began last December. NUMMI is building a front-wheel-drive version of the Toyota Corolla to be marketed in the U.S. as the Chevrolet Nova.

First Acura groundbreaking

Tetsuo Chino, center, president of American Honda Motor Co., Inc., helped kick off the Acura Division's first dealer groundbreaking. The dealership, Frahm Acura, will be in Claremont, Calif. Also shown are principals of the firm: Louis Frahm, president, right, and Mitch Frahm, vice president. The Frahms currently operate a Honda dealership in Downey, Calif. The Acura firm is slated to open in April, 1986, to coincide with the introduction of the Acura in America.

Dealers' shop volume scores gain for month

By Jack Walsh
Service Editor

The nation's franchised car-and-truck dealers continue to report strong service and parts volume, with gains in the first two months in all segments of the business.

In February, according to the Automotive News Service Index, shop volume was 7.4 percent higher than the same month a year ago, while the two-month results were up 8.1 percent.

The leading indicator during the month was repair orders written. The February total—for both customer-paid and warranty work—was 11 percent higher than a year ago.

Total dollar sales of customer-paid and warranty labor rose 9.8 percent, while gross profit on all labor, parts and accessory sales in February advanced 6.7 percent over last year.

Dollar sales of shop parts during the month—those used in both customer-paid and warranty service—were 6.3 percent higher than a year ago. Sales of parts to outside customers were up 3.4 percent from 1984.

February sales of all parts and accessories advanced 4.6 percent over last year.

The leading indicator for the first two months was total labor sales, with a gain of 12.5 percent over volume in the like period a year ago.

Shop parts business through February was 9.4 percent higher than last year, while sales to outside sources advanced 3 percent.

The number of repair orders written in January and February showed an increase of 8.1 percent, and gross profit on total shop volume was 7.6 percent higher than a year ago. Two-month sales of all parts and accessories were up 5.7 percent from 1984.

Service Index figures are compiled from monthly reports from dealers in all areas of the nation.

SERVICE INDEX
107.4★

	Feb., '85 vs. Feb., '84	2 mos., '85 vs. 2 mos., '84
Gross Profit on All Labor and P&A Sales	+6.7%	+7.6%
Repair Orders Written	+11.0%	+8.1%
Total Labor Sales (Customer & Warranty)	+9.8%	+12.5%
Shop Parts Sales (Customer & Warranty)	+6.3%	+9.4%
Sales of All P&A	+4.6%	+5.7%

★—Survey by Automotive News shows that dealers' service and parts business in February, 1985, was 107.4 percent of business in February, 1984. Service business in the first two months of 1985 was 108.1 percent of business in the corresponding period in 1984.

If Olds builds a van, it will look like an Olds

DETROIT.—There may be a passenger van in Oldsmobile's future but its buyers will know it's an Olds and not a truck, the car maker's chief engineer said.

Speaking at a meeting of the Detroit Auto Writers Group, Theodore N. Louckes said he is working on van concepts with marketing people.

"We're trying to determine what the logical new types of vehicles are for Oldsmobile," he said. "The old, big station wagon has been around for a long time and obviously needs to be replaced in the future.

"Our first answer is a new, more modern better replacement. That's the obvious answer. But maybe there are some elegant, unique, dramatic designs in van hardware that would be of interest to us and I'm trying to look at that.

"We don't want to be in the van business," Louckes said. "That's the truck business which is not very attractive to up-level owners of Oldsmobiles. They don't want to look like they're driving around in a van or a truck. That's the reason they pay more to go around in an elegant station wagon."

"We'd like to give them something unique that's dressy and nice and, if there is a truck hiding under it, nobody knows it," he said.

GMAC ads advise women on credit rating

DETROIT.—General Motors Acceptance Corp. has launched a national ad campaign to encourage women to maintain good credit ratings.

The campaign centers on a full-color, 16-page booklet which advises women on the steps necessary to establish and maintain good credit ratings.

The booklet is entitled Women Can Get the Credit They Deserve. It will be available through GM dealers and will be featured in ads in national women's magazines. GMAC said insertion orders include Cosmopolitan, Ms., Working Woman, Redbook, Savvy and New Woman.

GMAC historically has espoused its opinion that a good credit rating is almost a moral obligation, and it has taken every opportunity to try to convince Americans to value their credit ratings.

So, the current campaign is not only a promotion to get potential female car buyers into dealerships and make them aware of GMAC retail financing, it is also an extension of GMAC's long-held position.

The new booklet explains what creditors, like itself, consider when approving a loan application, what the Equal Credit Opportunity Act means to women and covers other timely topics.

GMAC said it has distributed "more than 2.5 million" booklets to 10,000 U.S. GM dealers.

Dealers elect Dunn

GREENSBORO, N.C.—Robert C. Dunn, owner of Bob Dunn Ford here, has been elected chairman of the Carolina Ford Dealers Advertising Assn.

New Canadian VRA may seek investment

By Richard Johnson
Detroit Reporter

Although Japanese restraints in Canada have expired, Canadian Government officials plan to keep a close eye on imports while negotiating a new agreement.

Canada is seeking a lasting arrangement that reconciles import levels with the government's call for more Canadian investment by Japanese manufacturers.

"We are negotiating with the Japanese with a view toward reaching a more-comprehensive, longer-term agreement," said Denis Comeau, of the Department of International Trade in Canada's Ministry of External Affairs.

Comeau said it is too early to speculate on the new agreement, although he said the government wants something longer than 12 months and more comprehensive than an import quota.

"We don't know what is going to happen," he said. "But the ministers would like some type of investment coming to Canada. Certainly, the intent is to have more than we have now."

Canadian Prime Minister Brian Mulroney has indicated that quotas will be maintained until Japanese investment in Canada is expanded, although he has declined to say whether the cap will be increased.

Canadian federal officials complain that while Japanese companies have invested more than $5 billion in the U.S. automotive industry, there has been only $100 million to $125 million invested in Canada.

The voluntary limit, which expired March 31, restricted Japanese companies to 170,400 cars last year, or no more than 18 percent of the passenger-car market. A cap on Japan's share of the Canadian market was set in 1981 alongside the U.S. voluntary restraint agreement. Previously, Japanese companies had held as much as to 22 percent of Canadian auto sales.

The recently expired agreement allowed Japan's allocation to rise to a maximum of 170,400 (from a base of 166,000) if total new-car sales for the 1984 calendar year hit 943,000. Canadian sales last year reached 964,357.

Comeau said the two countries hope to settle the issue within the next several weeks, although he acknowledged that talks could drag on longer. Last year, a new one-year pact was not reached until June.

"Our ministers have expressed a hope that in the next couple of months we can arrive at some type of agreement," he said.

Meanwhile, he said Japanese importers will be monitored for increases in shipments. Japan's makers must not revert to "the traditional flow of imports," he said, or else "our ministers will take appropriate measures."

The president of the Canadian Assn. of Japanese Automobile Dealers recently predicted that Japanese volume would rise moderately, perhaps only to the range of 200,000-210,000 vehicles a year, if restraints are lifted.

Grote to retire; new team heads Chrysler Financial

TROY, Mich.—Chrysler Financial Corp. has shuffled its top management as a result of the retirement of E.O. Grote, president of Chrysler's financing subsidiary.

Grote will retire April 30. He has been with Chrysler Financial during all its 21-year history and has been in the finance industry for 38 years.

He has served as president and chief executive officer of Chrysler Financial since March, 1981. He was elected a Chrysler vice president in 1981.

Robert S. Miller, Chrysler Corp. executive vice president of finance and administration, has been elected chairman of Chrysler Financial in addition to his present duties.

Robert E. Baker, former finance vice president and general counsel of Chrysler Financial, has been elected vice chairman, and Jeremiah E. Farrell, former operations vice president of Chrysler Financial, has been named president.

Pensions and parity head the list

UAW-Canada sets Chrysler goals

By Marjorie Sorge
Labor Editor

TORONTO.—Pension increases and parity with Ford and General Motors of Canada will be the UAW-Canada's major bargaining goals in negotiations with Chrysler Canada this fall.

Robert White, UAW Canadian director, also said the union wants to negotiate a two-year pact which would expire simultaneously with Ford's and GM's on Sept. 15, 1987. The current Chrysler agreement ends Oct. 15.

The Canadian UAW's demands will not necessarily match those in the U.S.

Contract talks with Chrysler, which begin in August, will be the first set of negotiations the UAW-Canada will undertake as a separate union. It has officially split from the international UAW and will hold its Founding Convention in September. Those talks will be closely monitored by the rest of the auto industry.

"We will be on stage at Chrysler and all the lights will be shining on us," White said, "but I hope the corporation does not misread that and think we are not going to pursue our objectives. We have lived under a microscope before.

"There is absolutely no reason for a confrontation with Chrysler in 1985. They should be making overtures, saying we are not going to fight over these kinds of issues, but sometimes they have not shown very good judgment. We will have to wait and see."

The Canadian UAW will also discuss outsourcing and shorter work time and expects to agree to scaled wages at Chrysler similar to those negotiated at GM and Ford last year.

The GM scaled wages provide increases of 9 to 50 cents an hour in each of the last two years of the contract, while Ford goes from 9.5 to 45 cents an hour. The amounts depend upon job classification.

"We'd be hard pressed to say to Chrysler 'you have to come back to parity but you don't get scaled wages,'" White said. "You have to get back to parity with Ford and GM. The fact is, Ford and GM got a break on scaled wages. Chrysler has a fair way to go before they even start talking about that."

Reaching parity with Ford and GM will be the first priority and if Chrysler agrees to that, scaled wages would be the next step, he said.

The Big Three have not had parity agreements since 1979 when Chrysler was granted concessions because of its financial status.

The UAW-Canada plans to negotiate complete parity among Chrysler, Ford and GM so the workers will have basically the same wages and benefits when the contracts expire in 1987, if a two-year agreement is negotiated.

The Chrysler workers are currently making about $1 (Canadian) less an hour than those at Ford and GM. Chrysler workers make $12.72 an hour, while those at Ford and GM make $13.68.

Pensions will also be a major bargaining issue. Chrysler pensioners are currently getting $935 a month while those at Ford and GM get $1,025 (Canadian) a month for 30 and out. When the contracts expire, GM and Ford pensioners will be getting $1,250 a month. When the Chrysler contract expires in October, the Ford and GM workers will be getting $1,070.

Concessions in pensions were made in 1980, and further concessions were made in negotiations in 1981 and 1982.

"We must talk about how we make them (pensioners) whole for the immense sacrifices they made," White said. "Many of them won't live long enough for us to make them whole a little bit at a time. So we are looking at that."

That will not be done by simply bringing them up to today's level and forgetting about lost wages and benefits during the last few years, White said. That could mean the union will seek some retroactive payments as well as an immediate raise to parity.

While the union expects to discuss outsourcing and shorter worktime, those will not be major issues in the talks.

Chrysler Chairman Lee A. Iacocca has said he plans to move North American work offshore since the Voluntary Restraint Agreement on Japanese cars was not renewed in the U.S. Bargaining can only put a "band-aid" around the outsourcing situation, White said; the changes must come from the political sector.

"I blame them (the corporations) to this extent," he said. "They are quick off the mark with the record profits. They didn't make those profits offshore, they made them in North America.

A pair of Thunderbird firsts

George Watts, owner of the first Ford Thunderbird ever built, above right, took delivery of the first 30th anniversary limited-edition T-bird at Earnest Ford, Orange, Calif. Watts also owns the one-millionth T-bird (a 1972 model). Only 5,000 30th Anniversary Thunderbirds will be produced.

January total is 788,765

Car registrations best since 1973

By Jenny L. King
Detroit Reporter

Registrations of new cars in the U.S. the first month of 1985 were best for January since the boom year of 1973 and were up 5.56 percent from the January, 1984, total.

Figures reported by R.L. Polk & Co. note January registrations of 788,765, highest since the 828,618 recorded back in 1973. In 1984, first-month registrations totaled 747,231, making the more recent figure an improvement of 5.56 percent.

January's total was off 4.13 percent from the December registrations sum of 822,721.

Imports accounted for 26.41 percent of the grand total, up from 26.09 percent in January, 1984. The totals were 208,340 this year and 194,947 in 1984.

Domestics numbered 580,425, up 5.10 percent from 552,284 a year earlier. Domestics were off 2.99 percent from the 598,315 reported for December, 1984.

Chrysler Corp. and Ford Motor Co. posted market-share gains, year to year, in January. General Motors and American Motors were down, and imports showed an increase of 0.32 percentage points.

Chrysler climbed to 10.89 percent of the total market from 9.07 percent a year ago, an increase of 1.82 percentage points. Ford was up 0.51 percentage points, to 19.85 percent from 19.34 percent.

GM slipped 1.75 percentage points, to 41.51 percent from 43.26 percent, and AMC was down 0.90 percentage points, to 1.34 percent from 2.24 percent.

Miscellaneous domestics, with just seven registrations this year and 27 in 1984, failed to take a substantial piece of the total.

Of the domestics only, GM registrations accounted for 56.41 percent this year, 58.53 percent in 1984. Ford was up to 26.97 percent from 26.17 percent. Chrysler

'Day in Court' covers makers' finance units

WASHINGTON—Auto makers' finance subsidiaries are subject to the Dealer's Day in Court Act if they engage in prohibited activities while under the control of the manufacturing company, a U.S. District Court in Ohio has ruled.

The ruling in Bonnano vs. Chrysler Corp. found that Chrysler Credit was a party to Bonnano's franchise agreement with Chrysler Corp. since it engaged in financing the dealership.

Chrysler Credit is a wholly owned subsidiary of Chrysler Financial Corp. which, in turn, is a subsidiary of Chrysler Corp.

The court held that Chrysler Credit's refusal to lend Bonnano money to buy Chrysler Corp.'s preferred stock holding in Arena Dodge, Inc., and Bonnano's subsequent termination as president, general manager and director of Arena Dodge, gave Bonnano standing under the act since Chrysler Credit's actions were due to Chrysler Corp.'s control over the financing arm.

Judge Walter H. Rice rejected Chrysler Credit's claim that it was not a "manufacturer" under terms of the Dealer Day in Court statute.

Citing an earlier decision in Colonial Ford vs. Ford Motor Co., the judge reasoned that "if a wholly owned finance company was indeed subject to the control of its parent automobile manufacturer, the subsidiary's insulation from liability under the (Act) would permit the parent to do indirectly what it could not do directly."

GM warranty on gray-market cars

By Dan McCosh
Detroit Reporter

One of the largest gray-market importers of Mercedes-Benz cars in the U.S. has arranged a four-year/50,000-mile mechanical-service warranty for the vehicles through a General Motors insurance subsidiary.

Weil Imports, Libertyville, Ill., has an agreement with CIM Insurance Corp., an affiliate of GM's Motors Insurance Corp., to provide the service warranty. According to Weil, the extended warranty means that the car can be serviced by any GM dealer during that warranty's tenure.

Weil, a large-volume Oldsmobile dealer, has become one of the largest gray-market importers as well. This year, he plans to bring in about 2,000 Mercedes models that are not sold through franchised Mercedes dealers.

"We're trying to dispel the notion being promoted largely by North American dealers that the cars we're importing are some sort of cheap reproduction or imitation," said Erwin Weil, dealership president. "They're not. The only difference is that we're federalizing them here instead of in Europe."

A spokesman for Mercedes-Benz of North America said the price differential between gray-market imports and those imported through MBNA is due mainly to the equipment level of the cars. Several Mercedes models are sold at lower equipment levels in Europe than a similar model in the U.S., the spokesman said.

Daimler-Benz extends a one-year warranty on cars purchased in Europe, but the MBNA spokesman cautioned that the one year is from the time of purchase by the gray-market dealer in Europe, not from the time of sale to the final customer in the U.S.

He also noted that modifications to the driveline—normally necessary to comply with U.S. emissions standards—can void the factory warranty.

GM ended up handling the warranty on the Weil Mercedes models because a GM dealer can get extended warranty coverage for non-GM cars he also handles, according to a GM spokesman.

This is common practice in the case of dual dealerships, but GM said it has no information about how often the policies are being used to insure gray-market products.

Glaval buys True North to join RV field

ELKHART, Ind.—Glaval, Inc., has acquired True North Corp., Nappanee, Ind., a manufacturer of travel trailers. It will be operated as a wholly owned subsidiary of Glaval.

Richard Strefling, Glaval president, said True North will enable his company to enter the recreational vehicle market and eventually produce a complete line of motorized and towable vehicles.

Strefling added that no personnel changes would be made as a result of the acquistion.

Key executives at True North include Peter Stone, general manager; Thomas Clarke, general sales manager, and Thomas Sandlin, production manager.

"They are the core of a very solid management team which provides True North with the ability to enjoy substantial and sustained growth" in future years, Strefling concluded.

Glaval is the parent corporation of Gladiator, Inc.; Universal Motor Coach; Mid Atlantic Universal Motor Coach; Auto Form Corp.; Le Van, and Dusterfield Corp.

It collectively represents one of the country's leading manufacturers of personalized vehicles.

Wheat motor homes draw auto dealers

By Joseph Bohn
Truck & RV Editor

Some 26 dealers, most of them car dealers, have signed or are preparing to sign on as franchisees of the revived General Motors-designed motor home being built by Wheat Motor Co., Rancho Cucamonga, Calif.

George Byers Sons, Inc., Columbus, O.; Newman Chevrolet, Cedarburg, Wis., and Barry-Cassata GMC, Inc., Glen Ellyn, Ill.—all GM dealers—were the first three to sign up for the Wheat motor homes which will be introduced in September.

Jake Green, vice president of marketing and sales for Wheat Motor, said he received an enthusiastic response from dealers in his first recruitment efforts.

The company had signed agreements with 11 dealers by early April, representing a quota of 642 units.

The quotas indicate what dealers feel they can sell, based on an analysis of their markets.

Of the 11, nine are auto dealers. Two are previous RV dealers.

The company also had oral agreements for contracts with another 16 dealers, representing a quota of 804 units. Fifteen of them are auto dealers and one is an RV dealer.

Wheat plans to have 40 dealers signed by the September launch.

Most of its dealers are GM

Truck sales at peak for March, quarter

By Joseph Bohn
Truck Editor

Led by the light-duty segment, new-truck sales soared to an any-month high for March and an any-quarter high for the first quarter.

Franchised dealers and factory outlets retailed 1,188,484 trucks of all kinds during the first quarter, up 17.5 percent from the previous any-quarter high of 1,010,-911 set during January-March, 1984.

March retail sales of 430,070 were up 7.8 percent from last year's 398,866 and were 6.6 percent ahead of the the previous any-month high of 403,078 set in March, 1978.

The figures are based on preliminary sales reports from the MVMA plus sales reported by the Japanese import manufacturers.

The MVMA reported 364,248 trucks sold in March, up 8.6 percent from 335,478 in like 1984.

Class 1, 2 and 3 light-duty sales of 339,010 trucks in March were up from last year's 313,686, according to MVMA.

The Japanese contributed another 65,822 sales, bringing the light-duty segment total to 404,-832, up from 377,074 in like 1984. The Japanese contributed 63,388 to last year's monthly total.

Medium-duty Class 4, 5 and 6 sales totaled 4,988, up from 4,-737 last year.

Class 7 and 8 heavy-duties recorded sales of 20,250 in March, up from last year's 17,055.

MVMA reported first-quarter sales of 993,121, up 16.5 percent from 852,774 last year.

Its light-duty sales total was 926,429, up from 796,628 in the first quarter of 1984. The Japanese added another 195,363 to the first quarter, bringing the light-duty segment to 1,121,792, up from 954,765 last year. The Japanese added 158,137 to last year's quarterly total.

Medium-duty sales totaled 13,-592, up from 12,759 in the first quarter of last year.

Heavy-duty sales totaled 53,-100, up from 43,387 last year.

Among the Japanese firms, Toyota's record March sales of 27,644 were up 12.9 percent from the previous record of 24,478 last year. Toyota has had 14 straight months of sales increases.

Nissan, at 20,761, was down from 22,983 a year ago. Mazda, at 8,414, was off from 12,330.

Isuzu, at 6,032, was up from 2,-346. And Mitsubishi, at 2,971, was up from 1,251. Both are still gearing up and adding dealers, and their sales were records.

Among domestic manufactur-

Moving 'em out

Winnebago Industries wholesaled 887 motor homes, with an approximate value of $24 million, to dealers during the last week of February. It was the highest single-week tally in 12 years. Here, workers add finishing touches at the firm's plant in Forest City, Ia.

Durakon set to expand in U.S., abroad

LAPEER, Mich.—Durakon Industries has made two agreements to increase sales and distribution of its products domestically and overseas.

It made an agreement with Coach-Lite Supply Co., subsidiary of Coachman, Inc., whereby Coach-Lite will serve as the master distributor of Durakon's All Star truckbed liner throughout most of the U.S.

Duraliner pickup truckbed liners and other Durakon products will also be distributed in the Middle East by Saad M. Al-Juraid, of Saudi Arabia.

The agreement is part of the company's international growth strategy.

Late in 1984, the company opened subsidiaries in Japan and Canada.

RV shipments off as dealers peg orders to sales

By Joseph Bohn
Truck and RV Editor

RV manufacturers wholesaled slightly fewer units in January than a year ago as dealers began gearing orders more closely to sales.

Fred Emmert, vice president of sales and marketing for Winnebago Industries, Forest City, Ia., pointed out that after 12-16 months of building motor home inventories—ordering more units than they were retailing—dealers now are pegging orders directly to retail sales.

"They're neither increasing nor decreasing stocks," Emmert said, "but gearing orders directly to sales."

Previous inventory-building efforts made January, 1984, look stronger than this year, he added.

Still, there is some indication of softer retail deliveries in January, 1984, as well. Emmert didn't want to blame the weather, although it wasn't very good in some Southern and Southwestern areas of the country. Interest rates were favorable, he added, and money was available.

The industry's January decline appears temporary, though. Winnebago, which had a modest gain in January (940 units vs. 899 a year earlier), saw a very sharp increase in February, Emmert said.

And Dr. Richard Curtin, of the Survey Research Center, University of Michigan, found the Index of Consumer Confidence climbing in January to 96.0 from 92.9 percent in December.

"Widespread reports of price discounts and declines in interest rates have reinvigorated consumer buying attitudes," he said.

"The recent improvement was due to more favorable perceptions of market prices, and financial prospects for the year ahead remain favorable," he added.

Overall, manufacturers reported wholesaling 28,900 units in January, off 0.3 percent from 29,-000 a year earlier, according to the Recreational Vehicle Industry Assn. RVIA added that January's total was up 12 percent from the December figure.

It found that retail sales, as measured by its Index of Retail Activity, gave off mixed signals for different segments in January.

Sales of travel trailers were somewhat lower both on the wholesale and retail side, while reports on Type A motor homes showed substantial increases.

The total of "towable RVs," encompassing travel trailers, folding camper trailers and truck campers, was 9,600, off 15.8 percent from 11,400 a year earlier.

Manufacturers shipped 6,600 travel trailers of all types, RVIA reported, off 23.3 percent from 8,-600 in January, 1984.

Again, folding camping trailers were up 4.0 percent to 2,600 from 2,500 a year earlier, while truck campers increased 33.3 percent to 400 from 300 a year earlier.

The motor home segment was off 10.6 percent. Deliveries of 5,-900 were off from 6,600 a year earlier.

In that segment, conventional Type A motor homes totaled 3,-200, according to RVIA, off 5.9 percent from 3,400 a year earlier.

Van campers (Type B) totaled 500, a 25 percent increase from 400 shipped a month earlier.

And chopped vans of all types dropped 21.4 percent to 2,200 from 2,800 a year earlier.

Van conversions, meanwhile, jumped to 13,400 percent, a 21.8 percent gain over 11,000 a year earlier.

In a new breakout for Type C motor homes, RVIA found that more than half of the reported de-

Champion names JWT for dealers

DRYDEN, Mich.—Champion Home Builders Co. named J. Walter Thompson, Detroit, as the ad agency to handle the dealer co-op ad program of its RV Division.

Clare G. Wentworth, Champion vice president, recreational and commercial vehicles, said company management has given "high priority" to the RV Division and budgeted for what he claimed was the "strongest dealer co-op ad program in the industry."

Turtle Top's new camper van

Turtle Top, Inc., Goshen, Ind., calls its new Classic II Camper Van an all-purpose vehicle that provides easy driving and maneuverability. The unit utilizes a Ford Supervan and features a complete self-containment package. It also is available without this package.

Marketing & Media

Continued from Page 57

handle all of its corporate car rental advertising in the U.S.

The account was previously handled by McCaffrey & McCall, a Saatchi & Saatchi unit. McCaffrey & McCall retains Avis' international business.

Other promos

General Tire, with its biggest new-product ad budget ever, plans a late-spring, early-summer national sweepstakes to support introduction of the high performance XP2000 series tires.

Grand prize is a trip to Europe for two plus a Pontiac Fiero GT. Second prize is a Fiero GT. One hundred runnersup will receive a choice of a set of XP2000 tires or $200 in auto care service at a participating General Tire dealer.

The sweepstakes runs from April 29 through June 29.

Alpine Electronics of America, Inc., will give away a loaded Lamborghini Countach as a grand prize in a summer contest. Winner will be selected from licensed drivers who purchase any Alpine product from an authorized dealer between May 15 and Aug. 31.

Entrants must describe what the two-year-old Alpine ad slogan "Alpine Touch" means to them. A Countach lists at $99,500.

Personnel

Brian Bowler is joining Doyle Dane Bernbach July 1 as executive vice president in the Detroit office.

Bowler, sales and marketing director for Volkswagen and Audi in Britain since 1978, will be responsible for their U.S. advertising and is expected to become DDB president within two years.

MVMA has appointed **Anne Marie Sylvester** a public relations associate. Sylvester joins MVMA from the University of Detroit where she was a journalism instructor.

Joseph Caponigro has been promoted to Dodge truck media director for BBDO, Inc.

Mark Rowlands replaces Caponigro as truck account media supervisor.

Althea Underwood succeeds Rowlands as media supervisor for BBDO's California and Direct Connection accounts.

Cheryl Harps moves from assistant to supervisor in BBDO's broadcast group.

Truck sales for March, quarter, set new marks

Continued from Page 16

ers, Ford's light-duty sales of 117,729 in March were up from 108,040 last year.

Chevrolet's 111,170 light-duty sales in March were up from 103,314 in like 1984.

Chrysler's sales of 61,899 set an any-month record, topping the previous record 59,384 set in June, 1978. Sales were also up 13.5 percent from last year's 54,533. Chrysler sells only light-duty vehicles.

GMC's light-duty sales of 25,985 were up from 24,103 last year.

And American Motors' Jeep sales of 12,375 were up from 12,143 in 1984. Jeep's sales are all light-duties.

Toyota's quarterly sales were 75,985, up from 58,583 last year; Nissan's were 73,112, up from 59,185; Mazda's were 24,264, down from 30,769; Isuzu's were 15,819, up from 5,900, and Mitsubishi's were 6,163, up from 3,700 last year.

Among domestic manufacturers, Ford's first-quarter light-duty sales of 312,113 were up from 269,118 last year.

Chevrolet's first quarter light-duty sales were 307,412, up from 267,218 last year.

Chrysler set a first-quarter record with 160,914, topping the previous first-quarter high of 143,220 set in January-March, 1977. Sales were also 25.7 percent ahead of 127,993 last year.

GMC retailed 71,368 light-duties, up from 68,955 last year.

And Jeep retailed 38,129, up from 34,548 in the first quarter 1984.

Among domestic manufacturers, Chevy retailed a total of 112,678 trucks in March, up from 104,687 last year.

Its quarterly total of 311,837 was up 15.2 percent from last year's 270,684.

Ford retailed a total of 122,538 trucks in March, up from 112,679 last year. Its quarterly sales of 326,165 were up 16.4 percent from last year's 280,321.

Neither Ford nor Chevrolet set any sales records for the periods.

GMC's monthly sales totaled of 30,004, up from 27,515 in 1984.

Its quarterly sales of 82,849 set a new record for the period, topping the previous first-quarter, 1979, high of 81,911 and exceeding last year's 78,835 by 5.1 percent.

Bumpers on 4 GM lines cited in insurance losses

WASHINGTON.—Sharply increased insurance losses have been reported for four 1984 General Motors models—Pontiac Phoenix, Buick Regal, Buick LeSabre and Buick Electra, all of which had weaker bumpers than in 1983.

Claim frequencies rose 16 to 24 percent compared with their 1983 counterparts, which were equipped with stronger bumpers, according to the Highway Loss Data Institute (HLDI), an independent group affiliated with the Insurance Institute for Highway Safety (IIHS).

Meanwhile, the claim frequencies remained the same for the 1983 models of those lines.

Following NHTSA's decision to drop back from its 5-MPH bumper standard (no damage to the body and only minimal damage to the bumper face bar), some companies retained strong bumpers, some kept protection for the car body and others reverted to 2.5-MPH protection.

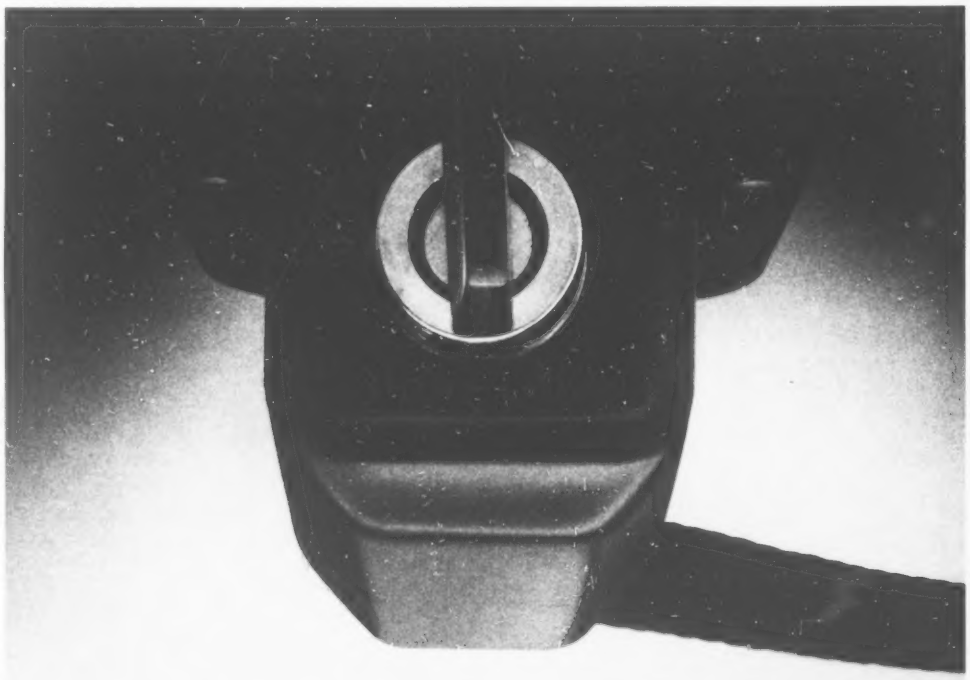
GM made no major changes in its 1983 bumpers but did weaken 1984 models. Since then, GM has dropped the Phoenix X-car and has upgraded bumpers on the 1985 Buick LeSabre, Electra and Regal. The return, however, is to what is called Phase I bumpers—allowing damage to the bumper itself but not to the car body.

Besides the greater number of claims, HLDI reported that average loss payment per insured vehicle year also rose substantially for cars with weakened bumpers compared with the previous year's car family.

Brinson named director of View Engineering

KOKOMO, Ind.—Frederick D. Brinson, manufacturing director for Delco Electronics Division of General Motors, has has been selected to represent GM on the board of directors of View Engineering, Simi Valley, Calif.

View Engineering is one of five machine intelligence companies with which GM has formed business relationships, including a minority equity investment.



this is probably none of your business

but it could be part of your profits

You're probably like a lot of dealers and don't get involved in auto security systems. Because you haven't found a security system you can trust.

Trust this.

MaxiGuard has the right systems to sell. Only MaxiGuard has a hoodlock that's solid case-hardened steel all the way through. We call it Maxi-Lok.™ and it features a unique TuBar lock cylinder with over 5 million key combinations. And MaxiShocker.™ a very smart motion detector that senses breaking glass, lock punchout, jacking or jarring.

Twenty six years of proven auto security experience has earned MaxiGuard a reputation for being the strongest protection from car theft available. We even qualify for the highest insurance discounts in most areas.

Make MaxiGuard part of your business, and we'll make it our business to supply you with all the dealer support you need to make the sale. Now, what was none of your business, can become a big part of your profits.

Call us today for more information about the complete line of MaxiGuard security systems.

Celebrating 50 in South Dakota

Ford Division Twin Cities District Manager Robert Garrett, left, congratulates Stan, center, and Bud Cornelius during the 50th anniversary celebration of Cornelius & Dahl Implement Co., Rosholt, S.D.

Car-rental firm speaks many tongues in Florida

FORT LAUDERDALE.—Alamo Rent A Car, which serves 12 states, has introduced its "Car Rental Hotline" multi-lingual translation service to aid its foreign customers.

The concept is being tested in three Florida cities—Miami, Orlando and Clearwater—because it is in these areas where the majority of foreign tourists flock, said Robert M. Coffey, Alamo's executive marketing director.

The hotline provides telephone translations in French, Spanish, German, Italian, Portuguese and Japanese, representing the languages of 90 percent of all non-English speaking visitors.

Translators are provided through HATA U.S.A., a Miami-based travel service that provides assistance to foreign travelers. Alamo customers are assisted by a car rental representative who puts them in touch with the Hotline to make sure they understand rental costs, insurance and related matters.

They are also provided with travel assistance relative to hotels, air transportation and tourist attractions, and given a card with the hotline number to carry with them during their visit should they need further assistance, Coffey said.

The complimentary service is available 24 hours a day, seven days a week, with the exceptions of Labor Day, Thanksgiving, Christmas and New Years Day.

If successful, the service will be expanded throughout the company's network of facilities, Coffey said.

Borton offers free limo rides to business flyers

MINNEAPOLIS.—Borton Limousine Service is providing transportation to the Minneapolis-St. Paul International Airport at no charge for passengers traveling with Scandinavian Airlines from Chicago to Europe.

Borton uses Volvo limousines featuring telephone, stereo, wet bar and television to service Scandinavian Air business and first-class passengers within a 20-mile radius of the airport.

Passengers may be picked up at home or office and ride to Twin Cities International, where flights to Chicago will connect them with Scandinavian Air flights to Europe.

Traveling in style

Al Stewart, left, manager of Borton Limousine Service, and Ken Lindahl, vice president and general manager of Borton Volvo, are shown with a Volvo 760-GLE limousine. The company offers free limo service to the Minneapolis-St. Paul International Airport for certain Scandinavian Airlines passengers.d

Comfort, convenience, testing involved

Passive-restraint changes proposed

Continued from Page 1

ied a petition by the Committee of Common Market Automobile Constructors to increase the head injury criteria (HIC—a measurement of serious or fatal head injury) from the current 1000 to 1500 in the interest of international harmonization.

In general, NHTSA did not reply to the multitude of petitions outstanding, some probably because they could impact the ongoing litigation claiming that a federal standard cannot be contingent upon state legislative actions. One such petition would require only air bags; another would require only state laws; yet another would change the federal criteria for state laws. Responses to those petitions were due last August.

NHTSA has opened a number of issues for public comment:

1. It proposes exempting convertibles from passive-restraint requirements starting with 1990 models. Even though production of convertibles is rising and NHTSA believes passive restraints could be used, the design problems are expensive. NHTSA proposes allowing the option of lap belts with belt strength tests and anchorage attachments only.

2. It proposes either retaining HIC with or without head contact or adopting one of two alternatives: Using a new neck injury criteria that could also reduce brain injury for non-contact situations while retaining the head-contact part; or calculating a HIC for both contact and non-contact but limiting the calculation to a specified time interval, probably any interval up to 36 milliseconds.

3. It proposes adopting several parts of the test procedure being used in NHTSA high-speed crash programs: Positioning of test dummies so feet do not rest on the wheel well and changing the fuel system requirement as part of the vehicle loading procedures.

4. It proposes allowing the "due care" provision of the 1966 law to apply to compliance with Standard 208 because of its complexity.

5. It proposes again dropping the oblique test (30 degrees frontal) requirement, an issue on which the companies appear to be about evenly divided.

6. It proposes dynamic testing for manual lap/shoulder belts. This means using an instrumented dummy instead of the old webbing stretch-and-pull.

Although consumer advocates have wanted dynamic testing for years, NHTSA is finally agreeing because of the trend toward smaller cars and because of more tension-relieving devices (like "window-shades") which can make belts much less effective. The crash tests would have the dummy belted according to the auto maker's recommended slack level.

However, NHTSA proposes an effective date of 1990 models and "only" if the provision of two-thirds of the population in states with mandatory-use laws rescinds the passive-restraint standard. One reason cited by NHTSA is that more than half of the vehicles crashed at high speed by NHTSA do not meet one or more of the injury criteria and although these are high speed, the dummy is strapped tightly by the belt.

NHTSA also adresses certain other questions.

For example, what is a "manufacturer?" This is needed to determine production and compliance. NHTSA is proposing agreeing with the answers proposed by the Automobile Importers of America (AIA) and General Motors, Toyota and New United Motor Mfg., Inc.

That is, a manufacturer could determine, by contract, which cars will count as its own cars; but absent such a contract, an imported car could be counted by the importer, both gray market or otherwise; or a car made by more than one manufacturer could be counted by the one which sells the car.

Ford Motor Co. asked about a situation where a maker sponsors the design and making of a vehicle for its own account as a joint venture or as an outside purchaser. NHTSA suggests that, depending on circumstances, either could be the "manufacturer."

In proposing to clarify "average annual production" in order to get a proper percentage for the vehicles with passive restraints, NHTSA said the meaning is "cars manufactured for sale in the U.S." It also proposes treating gray-market importers as manufacturers required to meet the passive-restraint standards.

Moreover, NHTSA is inclined to allow manufacturers exceeding the passive-restraint percentage level early to carry them forward against the requirement of later years (even allowing makers to count any 1986 models with passive restraints), but it is opposed to allowing any carryback of percentage amounts.

NHTSA also says it will propose a new regulation dealing exclusively with automatic restraint phase-in reporting requirements. Instead of figuring the percentage on the average of the last three years' production, NHTSA is also considering allowing the percentage to be based on actual yearly production—thus taking care of the possible cyclic swings that could end up requiring a much higher percentage of vehicles with passive restraints.

The last package of NHTSA proposals deals with the Hybrid III dummy, which GM has been working on since 1972. The agency proposes that 45 days after the final rule, manufacturers could use either the current dummy or the Hybrid III dummy, but as of Sept. 1, 1991, the Hybrid III would replace the current dummy for compliance with Standard 208.

NHTSA also proposes to set new injury reduction performance requirements for facial lacerations to go into effect for 1990 models and, in response to a petition from the Center for Auto Safety, to set new injury reduction performance requirements for the neck and chest, to become effective 45 days after the standard goes into effect. Also to be proposed are new requirements covering the knee and tibia which would go into effect for the 1992 models.

Appeals Court upholds Texas lemon law

NEW ORLEANS.—The Fifth U.S. Circuit Court of Appeals overturned a Texas judge's ruling that struck down a Texas lemon law.

The ruling gave new life to a law similar to those adopted in 29 other states regarding the settlement of warranty claims.

Chrysler Corp. had challenged the Texas law, claiming that it was unfair on the grounds that dealers could form a majority on commissions set up to resolve disputes.

The Court of Appeals ruled that "Chrysler's challenge to the Texas lemon law ought to be directed to the Legislature rather than the courts."

Tennessee plant to ship parts to parent in Japan

LEWISBURG, Tenn.—Kantas Corp. here will begin exporting plastic parts back to its parent, Kanto Seiki Co., in Japan in July.

The Japan Economic Journal said that materials for plastic resins can be obtained in the U.S. at a markedly lower cost than in Japan, so that even with transport and distribution costs, a competitive edge is maintained.

The paper said that the plan is for Kantas to supply Nissan Motor Co.'s Smyrna (Tenn.) plant, which began assembling subcompact Sentras in late March. Once production gets solidly underway, exports to Japan will begin.

Kantas is building a factory here which will begin operating in July. It will produce instrument panels and other plastic parts.

Canadian UAW sets goals for Chrysler talks

Continued from Page 3

Now it is not a question of whether or not they are going bankrupt, but how much more money they can make."

Since this is the UAW-Canada's first time out as a separate union, it has been speculated that either the U.S. or Canadian union will negotiate a favored-nation clause, similar to what was bargained at Chrysler in the 1973 talks. The 1973 clause provided parity on both sides of the border.

The Canadian UAW has no plans to negotiate such an agreement, White said, although it expects to maintain close dialog with the U.S. UAW officials during negotiations.

"We have to get the me-too syndrome out of our heads," he said. "It is going to be difficult initially.

"Before we had to think, 'Can we do something that does not agree with the U.S. politically? Is it going to be compared and look as if we did not bargain as good an agreement (on one side of the border or the other)?' We have to have Canadian priorities over the top of the basic issues," he said.

Bommarito builds Mazda dealership

ST. LOUIS.—Frank Bommarito is building a Mazda dealership in suburban Ellisville. It is adjacent to his Oldsmobile-GMC facility.

Bommarito has been a Mazda dealer for six years. He said the facility will have 12 service bays, a two-story parts department and a 10-car showroom.

Cheers!

William Felts, left, owner of Pioneer AMC-Jeep-Renault, North Hollywood, Calif., toasts the opening of his dealership with Tom Peyton, AMC's California marketing manager, Los Angeles zone.

Will cost company much less than 'wheel tax'

UAW agrees to profit-sharing plan at AMC

By Richard Johnson
Detroit Reporter

The UAW will accept a profit-sharing plan from American Motors as the first installment on repayment of some $150 million in employe investments made over the past three years.

The plan is less-lucrative than the "wheel-tax"repayment option that was preferred by the UAW.

The union has also agreed to begin early negotiations at Kenosha and Milwaukee to replace contracts which won't expire until Sept. 15. Talks may begin as early as this week, according to an AMC spokesman.

AMC assembles Alliance and Encore at Kenosha; Milwaukee is a stamping plant. But the company has threatened to cease Wisconsin operations after Alliance/Encore production concludes later in the decade unless labor costs are made more competitive.

More than 12,000 hourly workers at the company's Wisconsin facilities and Toledo Jeep plant will receive smaller reimbursement payments than if AMC had agreed to a "wheel tax" repayment option based on production volume. Under terms of the Employe Investment Plan, the reimbursement method is subject to review again next year.

The "wheel-tax" option, favored by the union but opposed by AMC management, calls for the company to contribute $100 to a repayment fund for each of the first 200,000 vehicles produced by American Motors in the U.S. and Canada per year, and $150 for each additional vehicle.

According to an AMC spokesman, the "wheel-tax" plan would have required the company to dole out $40-$45 million this year, depending on final production totals. Instead, AMC will pay out $5.4 million under a format based on automotive profits. The company earned $15.5 million in 1984, its first profitable year since 1979.

Some 22,000 employes have participated in the EIP since 1982, according to AMC. A typical hourly employe in the program for the entire term has invested up to $10,000, including bonus credits. Based on that figure, a company spokesman said, a typical first-year profit-sharing payment will be about $300, payable in May.

AMC employes deferred some annual raises, casual days off and some cost-of-living adjustments when the three-year agreement was negotiated. The funds were earmarked for the company's new product development plan.

In response to questions submitted earlier this year by the union, AMC termed the EIP "the biggest single non-competitive labor cost item the company has."

American Motors officials have also complained that the company's hourly wage levels at Kenosha and Milwaukee, where some 7,000 are employed, are out of line with those of other U.S. auto makers. Jose DeGeurwaerder, AMC president and chief executive officer, has said the future of its Wisconsin plants hinges on labor costs to be negotiated with the UAW this year.

The union has agreed to begin negotiating new contracts far in advance of the expiration date. An AMC spokesman said last week talks will begin "in a matter of days."

"We're paying a premium on our labor contract," he said. "We're anxious to get a new contract in place that is competitive."

AMC has said Kenosha assemblers earn $13.44 per hour, or 37 cents more than counterparts at Ford Motor Co. and General Motors.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. New York and Oklahoma registrations compiled from manufacturers' sales records.

Car registrations for January are highest since '73

Continued from Page 3

grew to 14.80 percent from 12.27 percent, and AMC slipped to 1.82 percent from 3.03 percent.

Imports claimed the largest single segment of the market share breakout in January, 26.41 percent, followed by intermediates at 25.29 percent, compacts at 17.98 percent, subcompacts at 11.96 percent, standards at 10.02 percent and luxuries at 8.34 percent.

A year earlier imports earned 26.09 percent, intermediates had 25.84 percent, compacts had 17.49 percent, subcompacts had 12.93 percent, standards had 9.19 percent and luxury models had 8.46 percent.

The January, 1985, domestics-only market included 34.37 percent intermediates, 24.44 percent compacts, 16.25 percent subcompacts, 13.61 percent standards and 11.33 percent luxuries.

Comparable 1984 figures were: Intermediates, 34.97 percent; compacts, 23.65 percent; subcompacts, 17.50 percent; standards, 12.43 percent, and luxuries, 11.45 percent.

Kaide to head Mazda N. America

IRVINE, Calif.—Hisao Kaide has been named president of Mazda (North America), Inc.

Kaide formerly was manager of Mazda's product planning office in Japan. He succeeds Akiro Toriyama, who has been named general manager, service parts, at Mazda headquarters in Japan.

Mazda (North America) is a wholly owned subsidiary of Mazda Motor Corp. It was established in 1981 and is responsible for future product planning and research, technical assistance for service and parts and public relations and advertising coordination in North America.

Makers schedule 187,352 cars

Week's output is highest of year

By Louise Kertesz
Detroit Reporter

U.S. auto makers planned to build more cars last week than in any week so far this year—187,352 units. The total was 36.09 percent more than the 137,670 cars assembled during the previous week (a four-day week) and 5.43 percent more than the year-ago week's 177,695.

Contributing to the high output were 14 plants working overtime Saturday (April 13).

The record production week so far this year had been the week ended Jan. 12, when 185,560 cars were assembled.

Last week's targeted output was higher than any week last year except one—the week ended Dec. 15, 1984, when 189,998 cars were built.

So far this year, 2,509,821 cars have been completed, a bit less (0.53 percent) than the 2,523,135 assembled last year at this point.

Companies accounted for last week's scheduled production as follows: General Motors, 60.45 percent; Ford Motor Co., 19.35 percent; Chrysler Corp., 17.08 percent; American Honda, 1.68 percent; Volkswagen of America, 1.07 percent; Nissan Motor Mfg. Co., U.S.A., 0.21 percent, and New United Motor Mfg. Co., Inc., 0.16 percent.

General Motors scheduled two overtime shifts Saturday at the following plants: Pontiac (P plant); Lansing (Oldsmobile Nos. 1 and 2); Detroit; Arlington, Tex.; Doraville, Ga.; Fairfax, Kans.; Linden, N.J., and Oklahoma City.

One overtime shift was scheduled Saturday at GM's plant in Wentzville, Mo.

Ford scheduled Saturday overtime at its plant in Lorain, O.

Ford has scheduled daily overtime this week (April 15) at its plants in Atlanta; Chicago; Lorain, O.; Kansas City; Wayne, Mich., and Wixom, Mich.

Chrysler scheduled two overtime shifts Saturday at its plants in Belvidere, Ill.; Newark, Del., and Detroit.

Chrysler also scheduled two nine-hour daily shifts this week at its Belvidere, Newark and St. Louis (Nos. 1 and 2) plants and two 8½-hour daily shifts at its Detroit plant.

Splash curbs proposed for tractors and semis

WASHINGTON.—In response to a congressional mandate, NHTSA has proposed minimum standards to reduce splash and spray from truck tractors, trailers and semitrailers. The standards will become effective one year after the final rule.

Separately, the Federal Highway Administration is addressing installation standards for those spray-suppression devices on vehicles already on the road, including a requirement that all such vehicles be equipped with the devices four years after NHTSA sets its equipment standard.

NHTSA has tentatively determined that the only practicable and reliable devices at this time are flaps and side skirts. The flaps are similar to plain mudflaps but the surface facing the tires is designed to reduce the amount of spray.

NHTSA is also seeking comments on several alternative requirements.

The preferred one is to achieve spray reduction of at least 35 percent. The other alternatives are reductions of 50 percent or 75 percent, although NHTSA recognizes that it may not be feasible for most flap makers to design and make flaps within a year after the final rule.

NHTSA tentatively concluded that making flaps to reduce spray by 75 percent would be feasible four years after the rule and, therefore, is proposing such a program.

NHTSA has not proposed any performance requirements for the side skirts since size is the key variable.

Addressing installation, NHTSA proposed a position behind the drive and steering axles of all new tractors and behind the rear-most tires for each axle position on new trailers and semitrailers.

Side skirts, under the proposal, would be installed over the rear axle position of all new flatbeds, vans and tank trailers starting one year after the final rule. Installation would be over the steering axle position of new tractors and over the nose of new trailers and semitrailers starting four years after the final rule.

Black is inducted into Volvo Hall of Fame

TOPSHAM, Me.—Brian J. Black, of Bates & Cunningham, Inc., has been inducted into the Volvo Hall of Fame.

Volvo salesmen qualify for the honor by selling 1,000 new Volvos. Black has been with the dealership since 1958.

Truck production tops 70,000 for year's best week

With a full work week (including Saturday overtime) last week following a holiday period, U.S. truck makers scheduled the highest production of any week this year or last—70,954 units, 29.59 percent more than the previous week's 54,751 and 8.63 percent more than the year-ago week's 65,315.

So far this year, 982,035 trucks have been assembled, 5.35 percent more than the 932,200 completed last year at this point.

General Motors scheduled two overtime shifts Saturday (April 13) at its plants in Baltimore, Flint (Nos. 1 and 2) and St. Louis.

One overtime shift was scheduled Saturday at GM's Detroit plant.

Ford Motor Co. also scheduled Saturday overtime at its Louisville and Twin Cities plants.

Ford scheduled daily overtime this week (April 15) at the following plants: Lorain, O.; Wayne, Mich. (Michigan Truck); Kansas City; Twin Cities, and Louisville.

Saturday overtime is also scheduled for April 20 at Ford's Louisville plant.

Chrysler Corp. has scheduled two nine-hour daily shifts this week (April 15) at its plant in Warren, Mich.

Canada builds 23,522 cars; best week of '85

Rebounding after a holiday period, Canadian car makers scheduled production of 23,522 units last week, 45.13 percent more than the 16,207 built during the previous four-day work week, and about the same (up 0.84 percent) as the year-ago week's 23,325.

Last week's estimated production was the highest weekly output so far this year, topping the 23,068 cars built during the week ended Jan. 12—which also followed a holiday week.

So far this year, 283,731 cars have been assembled, 15.21 percent less than the 334,630 completed last year at this point.

Truck makers projected completion of 18,896 units last week, 38.55 percent more than the previous week's 13,638 and 4.35 percent more than the year-ago week's 18,109.

Year-to-date, 260,362 trucks have been built, 4.09 percent more than the 250,142 assembled last year at this time.

Chrysler's Windsor (Ont.) plant scheduled production of 2,670 Plymouth Voyagers, 2,826 Dodge Caravans and 612 Mini Ram Vans last week, bringing the T-115 total for the year to 83,725.

Chrysler deal is timely for De Tomaso

By Dan McCosh
Detroit Reporter

Officials at De Tomaso Industries, Inc., the U.S.-based company that holds a majority interest in Maserati S.p.A., apparently are gambling heavily that a new exotic sports car project with Chrysler Corp. will help resolve the firm's financial difficulties.

Although Chrysler Corp. has not made public the financial details of its arrangement with Maserati S.p.A. to build a $30,000 sports car for the 1987 model year, recent filings by De Tomaso Industries in the U.S. reveal Chrysler paid some $2.3 million for its 5-percent interest in Maserati.

The Chrysler investment came at an opportune time for De Tomaso. An option for a subsidiary of De Tomaso Industries to purchase controlling interest in Maserati was due to expire at the end of the year.

De Tomaso, while declaring a small operating profit in 1984, defaulted on two payments on loans of $39 million from the Italian government. The loans since have been converted into equity in various subsidiaries of De Tomaso by the government.

A note in the De Tomaso financial statement by the accounting firm of Ernst & Whinney says, "The company has a deficiency in

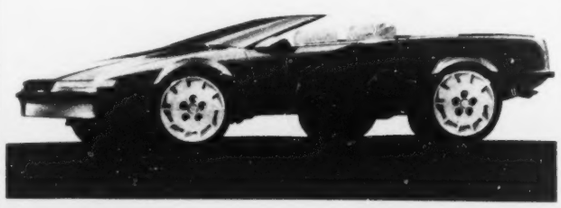
For Chrysler by Maserati



Sports car slated for 1987

This is a design concept rendering of the Chrysler-Maserati sports car which will be introduced in 1987. It will be made in Italy for sale by Chrysler dealers in the U.S. and Canada. A convertible and a hardtop coupe will be offered, priced in the $25,000-$30,000 range. Volume is expected to be about 5,000 a year.

Chrysler-Maserati car may be first of many

By Richard Feast
European Editor

MODENA, Italy.—Chrysler Corp's first Maserati-built sports car, a two seater which will debut in the spring of 1987, could be the first of several models to be sourced from the Italian company.

Donald P. Morrissey, Chrysler's director of special vehicle management in the product development office, anticipates annual sales of up to 5,000 for the first model, which will sell in the $25,000 to $30,000 range.

But he admitted that the two companies are discussing other products as well. Further agreements could result in Maserati building up to 10,000 vehicles a year for sale though the Chrysler-Plymouth dealer network in North America.

The prototype for the first car is now being completed. It will be sold in hardtop or convertible form as a "Chrysler made by Maserati."

The car, currently known as Q-Coupe, will use a U.S.-sourced 2.2-liter, four—cylinder turbo engine to drive the front wheels. It was styled in Detroit, with additional input from Maserati, and will be based on the platform of a new, as-yet-unannounced Chrysler sedan.

It will be stamped and assembled at the Innocenti factory in Milan, where the present Maserati Biturbo series is produced.

Morrissey believes that the car's most direct rivals will be the Mercedes-Benz coupes and roadsters and the forthcoming Cadillac Allante. The body shell of the Allante will be built in Italy by Pininfarina.

Chrysler said it is considering a 10-year anti-rust warranty for the body, in addition to a general five-year warranty for the complete car. This would be a result of extensive use of galvanized steel in the body.

No further technical details or marketing plans are being revealed for the time being by either company.

The power plant is a source of some mystery. The high-perfor-

Import-car stocks drop to 27 days, lowest in 5 months

By Kathleen Hamilton
Assistant Managing Editor

The stockpile of new imported cars on April 1 fell to a five-month low as Japanese imports slowed to a trickle at the end of the quota period and the Europeans increased their sales, trimming inventories even farther.

There were 226,912 import cars in stock on April 1, equal to a 27-day supply. It was the smallest stockpile since Nov. 1, when the figure was 186,567 cars, or 24 days' worth. On March 1, the figures were 250,745 cars and 31 days. On April 1, 1984, there were 212,315 cars and 27 days.

This month opened with 92,259 imported trucks in stock, or 33 days' worth. A month earlier, there were 87,383, a 30-day supply. A year earlier, the figures were 61,009 and 25 days. The import-truck inventory numbers include Tennessee-built Nissan pickups.

The combined import car-truck inventory stood at 319,171 vehicles, a 29-day supply, on April 1, compared with 338,128 vehicles and 29 days a month earlier and 273,324 vehicles and 27 days a year earlier.

March 31 marks the close of the Japanese fiscal year, and once again this year, most of the Japanese lines trimmed March shipments to keep within their quotas.

Subaru's inventories rose, partly as a result of slower March sales caused by acute shortages. Inventories of the other Japanese makes declined during the month, mostly because of reduced shipments. Mazda and Mitsubishi increased sales during the month, trimming their inventories.

Chevrolet's import inventory remains bloated by heavy stocks of Isuzu Spectrum: 91 days' worth this month, compared with 146 days last month. Chevy's Suzuki-built Sprint, meanwhile, continues in short-to-normal supply: 42 days this month versus 39 last month. The normal range for imports is 50 to 75 days, although it has been years since the Japanese makers have come within that range.

Audi's big month-to-month drop (from 124 days to 70) was due both to a slight sales increase and reduced imports. Volkswagen's changes were similar but less dramatic, and it trimmed its

How Japanese makers will share U.S. quota

The Japanese Government's allotments of cars that may be exported to the U.S. in the current year are not likely to please the larger manufacturers. Their quotas are up, but certainly not as much as they would like.

As an Automotive News source in Japan phrased it, "This is probably not the end of the matter."

At presstime, the government had not officially released the makers' quotas, but the newspaper Asahi Shimbun published a set of figures that are believed to be right on the money.

The quota imposed by the government is 2.3 million cars for the year beginning April 1, up 24.3 percent fron the 1,850,000 permitted under the Voluntary Restraint Agreement last year. Neither figure includes what Japan classifies as vans and are similar to station wagons. They have a separate quota. There is no quota for trucks.

Every Japanese maker will be permitted to ship more cars to the U.S., but Toyota and Nissan were granted increases of only 12.5 percent, and Honda was given a 15.1 percent hike. On a percentage basis—and generally on a numerical basis—the other five manufacturers were awarded larger increases.

Chrysler Corp. and General Motors received substantial increases in their captive imports, but neither company got as much as it wanted.

Here are the figures reported by Asahi Shimbun and the increases over last year:

Toyota's allotment is 620,760 cars, up 12.5 percent over last year's 551,800.

Nissan's share is 547,920, up 12.5 percent over 487,100 a year ago. Nissan Sentras now being assembled in Tennessee are not included.

Honda can send 428,590 cars to the U.S., which is 15.1 percent more than last year's 372,400. Those totals, of course, do not in-

Joint venture will build cars in U.S.

Chrysler, Mitsubishi make it official

By John Hartley
Staff Correspondent

TOKYO.—At last, Chrysler Corp. and Mitsubishi Motors Corp. (MMC) have signed their deal to produce 1.6-liter autos in a new factory in the U.S.

The agreement was signed last week during Chrysler Chairman Lee Iacocca's trip to Japan. In its April 8 issue, Automotive News reported that the joint venture would be announced during Iacocca's visit.

Although the company will be a 50-50 joint venture, Iacocca made it clear that to all intents and purposes this is an MMC project, with Chrysler doing a little bit of hand holding and taking cars and hoped-for profits.

Iacocca and Toyoo Tate, MMC president, signed the deal last Monday (April 15) in Tokyo. The following day, they discussed the new car which should go into production in 1989.

Iacocca was full of praise for MMC's new design, which he said was an attractive car. In all probability, this will, in effect, be the replacement for MMC's existing Colt, which is available as three- and five-door hatchbacks and as a four-door sedan. It rides on a 94-inch wheelbase and lengths vary from 152 to 162 inches. The new model is likely to be a little larger.

The plan involves an investment of $500 million and the company will eventually be capitalized at $150 million. Chrysler also is increasing its ownership share of MMC from 15 percent to 24 percent. The share will go to 20 percent now and to 24 percent within a year.

Output at the new plant, which will be in a Midwest state, will rise to 180,000 a year, with half being sold by Chrysler, and half by Mitsubishi Motor Sales of America, the Mitsubishi independent distribution arm in the U.S.

Defending his decision to buy more fully built-up cars from MMC while setting up the joint

Extra selling day accounts for rise

Early-April sales climb 5 pct.

By Jenny L. King
Detroit Reporter

Domestic new-car sales in early April continued on the fence, leaning slightly to the plus side: Up a few thousand in numbers, down in daily-rate sales and a few percent ahead of 1984 in the cumulative year-to-date tally.

The six major U.S. auto makers reported combined sales of 221,138 new cars for the April 1-10 period, up some 10,000 units from 210,395 a year ago. This 5.11-percent increase brought the year-to-date total to 2,263,302, up 2.64 percent from 2,205,004 at this time in 1984.

With nine selling days this year, the daily selling rate, 24,571, was off 6.57 percent from 26,299 based on eight days the preceding year.

This year's early-April total was best for the period since 1978 when 232,581 retail deliveries were reported.

Chrysler Corp. and Ford Motor Co. hyped the sales pace with increases of 30.09 percent and 20.44 percent, respectively. Chrysler reported sales of 32,018 passenger cars this year, up from 24,612 in 1984. On a daily-rate basis, Chrysler sales were up 15.62 percent. Ford was up to 58,368 from 48,462, which was a gain of 7.05 percent daily rate.

General Motors sales dipped 3.54 percent, to 123,461 from 127,994 last year (down 14.26 percent daily rate). American Motors, with estimated sales of 3,000, was down 25.83 percent from 4,045 (down 34.12 percent daily rate).

Volkswagen was down 34.80 percent, to 1,276 from 1,957 (down 41.89 percent daily rate), and Honda dropped 9.32 percent, to 3,015 from 3,325 (down 19.38 percent daily rate).

Ford made the most dramatic climb in market share, rising to 26.39 percent from 23.03 percent for the period last year. Chrysler was up to 14.48 percent from 11.70 percent. GM plunged to 55.83 percent from 60.84; AMC was down to 1.36 percent from 1.92 percent; VW slipped to 0.58 percent from 0.93 percent, and Honda was off 1.36 percent from 1.58 percent.

Domestic makes with sales increases outnumbered losers nine to six. Plymouth was up 38.67 percent; Chrysler was up 11.38 percent; Dodge was up 38.64 percent; Ford was up 15.10 percent, and Mercury was up 73.78 percent.

Lincoln reported a 20.50-percent sales gain, Chevrolet was up 6.22 percent, Pontiac was up 28.33 percent and AMC was up an estimated 23.46 percent.

Buick sales dropped 31.13 percent for the period, Cadillac was down 24.71 percent, Oldsmobile was off 2.32 percent, Renault dropped 31.32 percent, VW was down 34.80 percent and Honda slipped 9.32 percent.

Saab 900-S two-door notchback bows

Saab's new two-door notchback version of the Saab 900-S is priced at $14,890 with manual transmission and $15,290 with automatic transmission. Equipment on the new model is identical to that of three- and four-door models, except for the seats, which are the same sport seats as in the Saab Turbo. The engine is an overhead-cam 2.0-liter with fuel injection.

One places tight curb on gray-market cars

Senate unit approves auto bills

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—An NADA-supported odometer bill and a strong package of safety measures including a virtual ban on importing gray-market cars has been reported out of the Senate Commerce Committee.

But floor action on the one authorizing money for NHTSA will be delayed until the auto makers and NHTSA cooperate to find a satisfactory way to rate vehicles for occupant protection, a program that was enacted into law in 1972, but which has never been accomplished.

With the agreement that some time would elapse before action, Senator Donald Riegle, Michigan Democrat, agreed to withhold his proposed amendments.

The odometer bill—strengthened from the one that passed the Senate last year but failed to become law because of House inaction—was reported out unanimously.

Its chief sponsor is Senator J. James Exon, Nebraska Democrat. Asserting that illegal odometer rollbacks were costing consumers as much as $750 per car, Exxon toughened the measure by raising the per-violation civil penalty from $1,000 to $2,000 and the potential jail term from one to three years.

It also now includes a provision requiring auction companies to record odometer readings and vehicle identification numbers (VINs) and to keep the records for four years. The bill also allows some flexibility for the Secretary of Transportation to determine whether a state's record-keeping program complies with the law. In general, the bill requires recording the odometer reading on the title and registration each time the vehicle changes hands.

• The gray-market bill, recently introduced by Senator Daniel K. Inouye, Hawaii Democrat, is identical to a House bill sponsored by Rep. Matthew Rinaldo, New Jersey Democrat. Its intent is to eliminate all vehicles which are not manufactured for sale in the U.S. and therefore are not built to meet emission control and safety standards.

The bill, however, would allow some flexibility for vehicles brought in for R&D, training, racing and for national security. It also would allow the Secretaries of Treasury and Transportation to allow temporary importation upon furnishing of bond under certain limited conditions or the importation of an incomplete vehicle or pieces of equipment so long as the next-step manufacturer certifies compliance with standards.

Senator John Danforth, Missouri Republican who chairs the committee, was the lone dissenter to the gray-market bill. He found it "over broad" and possibly anti-competitive.

The NHTSA fund-authorization bill, sponsored by Danforth, would allow an educational program for buckle-up programs but would require at least half for air bags.

At least $5 million of the total of $20 million would have to be "used to carry out a program to demonstrate the effectiveness of air-bag technology, with emphasis on lowest-cost technologies," and at least another $5 million would have to be used for "educational efforts related to the use of air bags."

The $20 million would have to come from unobligated funds available from highway safety programs appropriated under the 1966 traffic safety law, a sister law to the vehicle safety act.

The Danforth bill would also require NHTSA to reopen rulemaking leading to a new standard to improve side-impact protection and to have it apply to light

Ford hikes dividend 10 cents per share

DEARBORN.—Ford Motor Co. declared a second-quarter dividend of 60 cents a share on common stock. The dividend is payable June 1 to shareholders of record May 2.

The dividend represents a 10-cent-per-share increase from the 50-cent-per-share dividend paid in the first quarter of this year. The dividend increase reflects the company's strong earnings and cash position, Ford said.

Canada won't restrict imports from all lands

By Richard Johnson
Detroit Reporter

A Canadian Government spokesman has denied reports that Japanese import restrictions in Canada—if they are continued—will automatically extend to other foreign auto companies, including Hyundai.

The Korean company's successful entry into Canada last year has prompted a call for restrictions on Hyundai and elimination of the company's duty-free status.

The executive director of the Canadian Assn. of Japanese Auto Dealers said he was told by International Trade Minister James Kelleher that if the government extends the quota, it will likely include all imports, not just the Japanese.

But Denis Comeau, of the Department of International Trade in Canada's Ministry of External Affairs, said Kelleher "has made no such commitment."

"Korea is a different question," said Comeau.

Japanese limits, which expired March 31, have been in place in Canada since 1981. During the past year Japanese companies were held to 170,400 cars, or no more than 18 percent of the passenger-car market. Before quotas, the Japanese had garnered 22 percent of Canadian volume.

With restrictions in place, Japanese makers have shifted emphasis to larger, more profitable models in Canada and have created opportunities in the low-price end for the likes of Hyundai. The Korean company, marketing the rear-drive Pony subcompact, sold about 25,000 cars in Canada last year after initially projecting sales of around 5,000.

Thomas Buchanan, executive director of the Japanese auto dealers group, said he was informed by Kelleher during a meeting on March 13 that any new import guidelines will include more than Japanese firms.

"At that time, we met with him to discuss two things, dropping quotas and our complaint that the Korean car came in not only without quotas, but duty-free," Buchanan said. "He announced to us that any new program would include the (Hyundai) Pony. We took it one step farther and asked about companies like Volkswagen, whose numbers grew because of the quota, and he said all imported cars would be included."

"He did not say the new government plan would be quotas," Buchanan added. "Just that whatever it might be, imports would be included."

Government officials are now seeking a broad, lasting agreement with the Japanese that includes more than restraint levels.

Sharp lines from Sharpline

Tric Edition, a pressure-sensitive vinyl appearance package, is available for cars and trucks in five color combinations. The package is available from Sharpline Converting, Inc., Wichita.

Mercedes cuts wholesale prices of cars 3 pct.

MONTVALE, N.J.—Mercedes-Benz of North America reduced the wholesale prices of all its cars by 3 percent in what was described to dealers in a letter as a "temporary allowance" to support marketing efforts. Sticker prices were not changed.

In addition, the company quietly reduced retail prices on parts by 10 percent in a separate action that took effect at the beginning of the year.

This is the first time Mercedes-Benz has reduced wholesale prices on cars and the reductions range from $550 on a manual-transmission 190 Series sedan to $1,365 on the 500-SEC coupe.

According to a spokesman for Mercedes-Benz, the 3 percent reduction gives dealers "more leeway" in selling the cars though he said there were no large inventories of cars.

He did say the model mix was "heavier on diesel" and the demand for diesels was lower. The company is running ahead of projections for the end of last month, however sales were lagging behind last year.

The reduction took effect with March 18 deliveries and there was no indication when it would end.

As for the parts prices, the spokesman said this reflected current market conditions. No formal announcement was made of this retail price reduction except to dealers.

The company has been quietly reducing the prices on fast-moving items since October, 1983. This continued until the current across-the-board reduction took effect. Those reductions amounted to 17 to 18 percent on such items as brake pads and oil filters.

AMC to cut budget 25 pct.; every department affected

By Richard Johnson
Detroit Reporter

American Motors is gearing up for across-the-board departmental budget cuts of 25 percent—reductions which could result in some salaried layoffs and project eliminations.

An AMC spokesman said the cuts will be implemented next month. The reductions, which have not yet been formulated, are not expected to affect company product plans.

Although AMC reported its first full-year profit in five years last year, the company has been buffetted by recent slow sales for its subcompact Alliance and Encore models. Industry sources last week predicted that AMC will announce a loss for the first quarter —the first dip into red ink since the third quarter of 1983.

AMC may also be anticipating a wave of cost-cutting by French partner Renault. The French Government-owned auto maker's new chairman, Georges Besse, made his reputation slashing overhead at Pechiney, the state-owned aluminum maker.

Besse is expected to recommend elimination of at least 50,000 jobs worldwide at Renault, which reported a loss of nearly $1 billion last year. AMC has denied its new round of cuts is the result of a Paris directive.

The AMC spokesman said the company "is presently formulating a plan to reduce controllable personnel and non-personnel costs."

"Every department in the company will make a 25 percent reduction," he said. "It could involve budgeting for certain projects, looking for efficiencies—for instance in travel—and it could involve personnel cuts."

The company representative said he is not aware of any dollar figure for cost reduction. He declined to speculate on how much could be wrung out of AMC's operating expenses, or how many jobs might be cut.

"We're looking at long-term profitability for the company," he said. "Although we posted a modest profit for 1984, and 1985 looks to be a mirror of that, we have some pretty ambitious product plans. To make this thing a success, we have to control costs in other areas. Farther down the line, we'll see the fruits of these cuts."

Construction began last fall on a new $764 million (Canadian) plant in Brampton, Ont., that in mid-1987 will begin turning out a new intermediate model being developed jointly by AMC and Renault. The new car is a crucial part of the company's $1.8 billion production development plan aimed at broadening market coverage beyond the subcompact segment.

Sales for the subcompact Alliance and Encore models are down nearly 35 percent for the year as the market for small-car sales continues to sag.

AMC reported a profit of $15.5

Autovation innovations for Audi 5000

Autovation, Campbell, Calif., collaborated with other aftermarket firms to produce this modified Audi 5000-S Turbo sedan. Autovation manufactured a front spoiler, side skirts and rear spats in hand-laid fiberglass for the Audi 5000. The car shown also features BBS modular sport road wheels with Pirelli P7 tires, Recaro seats, a Blaupunkt sound system, a three-piece Foha rear spoiler and a lowered suspension setup with Bilstein shock absorbers.

Wisconsin units could close in 15 months

UAW holds fate of AMC plants

By Marjorie Sorge
Labor Editor

American Motors will close its Kenosha and Milwaukee plants within the next 15 months if the UAW does not agree to contract concessions, said Richard Calmes, AMC industrial relations vice president.

The UAW and AMC will likely begin contract talks early in May and finish as quickly as possible, well before the current contract expires Sept. 16.

If an acceptable agreement is not reached, those two plants will be closed and the work moved possibly to Canada or overseas, most likely to France, home of AMC's partner, Renault, Calmes said.

Milwaukee stamping would close when the current agreement expires and Kenosha in July of 1986. Kenosha builds the Alliance and Encore.

AMC has no intention of giving up those products, only of giving up the plants if a new concessionary contract cannot be reached, Calmes said.

The UAW had no comment on the situation other than saying it is still fluid.

The new agreement would have to give immediate wage and benefit concessions and agree to make future changes in line with those negotiated in upcoming contracts at Mazda, New United Motor Mfg., Inc. (the General Motors-Toyota joint venture), Saturn Corp., the newly announced Chrysler-Mitubishi venture and any other ventures that may occur, Calmes said.

AMC's wages at Kenosha and Milwaukee are currently about 70 cents an hour higher than those at Ford Motor Co. and General Motors.

Meanwhile, UAW officials in Canada are concerned about the future of the AMC plant under construction in Brampton, Ont.

That facility is scheduled to build a new AMC-Renault midsize car for the 1988 model year. But, Basil Hargrove, UAW administrative assistant in Canada, said the union is worried that AMC and Renault may elect to switch that work to Kenosha or import the car from France.

However, Calmes said there is no need to worry about the future of that operation.

• The company planned to sell about 150,000 of those cars annually in North America by 1990, which represents about five times the production capacity at the current Brampton plant which builds the Eagle.

Currently, the Canadian UAW has an advantage over its American counterpart. Kenosha has high union representative, one representative for every 23 workers. Brampton has seven full-time representatives for its entire workforce of about 700.

AMC is seeking reductions in representation from the UAW in the U.S. along with other concessions.

The high union representation at Kenosha costs AMC about 85 cents an hour, an AMC spokesman said. At GM union representation costs about 14 cents an hour.

Calmes has also written a letter to the UAW demanding that it accept profit sharing as a method of payback for the entire employe investment plan negotiated in the 1982 contract. The UAW has agreed to that payback formula for the first year.

Under that contract, the UAW agreed to invest about $110 million, for a total of about $150 million for all hourly and salaried workers, to help the company create a new product program by banking some wages and benefits. Each workers invested about $10,000.

The contract is backloaded, giving back to the workers almost everything invested at the end of the agreement, plus interest.

The agreement also allowed the union to pick from two payback methods, a profit-sharing formula and a wheel tax, which would have required the company to pay about $100 per vehicle produced in North America, or about $40 million a year. Profit sharing costs about $3.8 million annually for the UAW workers and another $1.6 million for salaried workers and other unions.

However, the contract stipulates that the entire amount must be paid back by 1988. That could be difficult using the profit-sharing formula alone, Calmes said. If AMC cannot meet the 1988 deadline, it will ask for some alternate arrangement or perhaps an extension, he said.

AMC plans to pay back its debt and will not renege on the agreement.

The UAW understands the company's problems, he said, and he expects the union to deal with the situation in a responsible manner.

A new contract will be geared to making AMC competitive in the small-car market, the segment that the new joint ventures are expected to hit.

But Calmes said he would expect the UAW to seek a commitment from the company to keep Kenosha and Milwaukee open for a specified time in exchange for a concessionary contract.

Meanwhile, workers at AMC's Jeep plant in Toledo, angered by the elimination of the wheel tax, sabotaged a number of vehicles last week. AMC lost the production of more than 1,900 Jeeps when it lost second shift production due to the vandalism.

Subaru Justy minicar due in U.S. by 1987

By Michelle Krebs
Financial Editor

PENNSAUKEN, N.J.—Subaru of America plans to bring the minicar built by its parent company, Fuji Heavy Industries, to the U.S. market within the next two years.

In an interview with Automotive News, Subaru Chairman Harvey Lamm said the minicar, called the Justy in Japan, will be brought to the U.S. market as soon as possible but by 1987 "at the outside."

Lamm said the American version of the Justy is likely to be somewhat different from the Japanese version.

The American Justy probably will have a three-cylinder, 1.2-liter engine, instead of a 1-liter engine. It will have four-wheel drive and will have a continuously variable transmission (CVT).

Lamm said Fuji expects to have a new vendor for the CVT lined up within the next 60 days. The original supplier was Van Doorne's Transmissie in the Netherlands, which recently ran into technical and financial difficulties.

"The potential for the Justy is greater than that for the XT," said Lamm, referring to Subaru's new 4WD sports model introduced in January. Subaru plans to sell 25,000 XT models.

He said the prime targets would be the first-time car buyer, the second-family-car market and the used-car market.

The Justy would go head-to-head with General Motors' im-

Chinese now can buy own cars

LONDON.—China has unveiled a new system of vehicle sales which will permit private citizens to own their own cars, according to a report published in the Financial Times.

Car ownership in China has been limited to a very few privileged persons in the past. In Beijing, there are 500 privately owned cars among a population of 9 million. Almost all of them belong to senior party or government officials.

China now is setting up six vehicle sales centers in Beijing, Shanghai and four other large cities. Individuals and private businessmen will be able to buy imported or Chinese-made cars at those centers from a stock of some 70,000 imported sedans, station wagons, minicars and trucks.

Most of those vehicles will go to official organizations or enterprises. Private buyers will need a letter of approval from their local party committee and will be required to pay 60 percent down.

The cheapest Japanese import costs about $9,000—about 30 years' pay for the average urban worker. In the past, imports were virtually nil. Almost all of China's annual production of about 300,000 vehicles has been allocated for official use. More than 100,000 vehicles are now being imported each year.

Wheel Foils

Tricodor/Goble of America, Farmington Hills, Mich., has introduced Wheel Foils, a new aerodynamic device for standard steel wheels. Wheel Foils have an integral, forced-air ventilating system which increases brake cooling efficiency, the firm said.

Iacocca book a best seller in Japan, too

Lee Iacocca is telling his story to the Japanese these days. His book, Iacocca: An Autobiography, is a best seller over there.

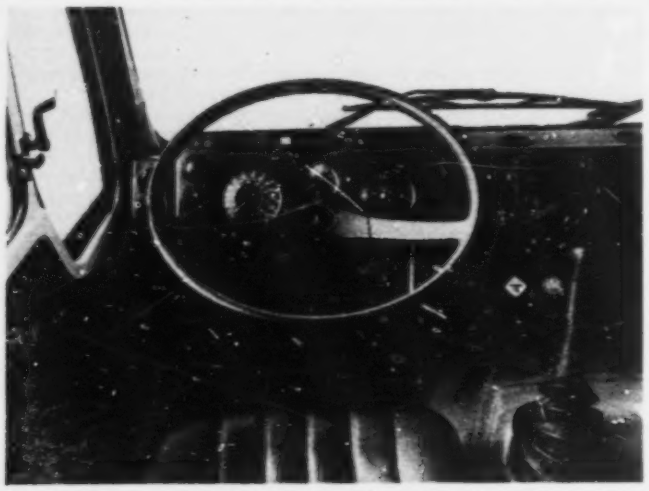
The translation of the book has been on sale in Japan since Christmas and more than 350,000 copies have been sold.

Diamond Sha, of Tokyo, the publisher, bought the translation rights from Bantam Books sight unseen. Bantam would not reveal the price. The original Japanese printing was for 200,000 copies.

In the U.S. and Canada, 1.7 million copies of Iacocca's book have been sold and it has been Number One on the New York Times National List for 26 consecutive weeks.

Iacocca is contributing all his proceeds from the book to charity.

The LPS 1525 joins the present line of M-B L series conventional trucks sold and serviced by over 200 dealers in North America.



The instrument panel includes a tachometer, air-restriction indicator, and gauges for air and oil pressure, coolant temperature and fuel level.

The ergononically designed three-person interior includes a sound-absorbing textile finish throughout the cab.

Mercedes-Benz Class 7 tractor debuts

Response to growing customer need for intra-city vehicles

Mercedes-Benz Truck Co. is introducing a new Class 7 cab-over-engine tractor, the LPS 1525. Featuring the latest technological developments, the tractor's highly compact, contemporary design is said to allow maximum maneuverability in tight city traffic, an advantage in urban delivery and intercity transit operations.

The new tractor complements currently available Class 6 and 7 conventional trucks of the company. "The LPS 1525 tractor is designed specifically to meet the needs of the American market place," says Peter E. Rupp, president and chief executive officer of Mercedes-Benz Truck Co. "Its debut will allow us to penetrate market segments in which we previously had not participated."

Pointing out that the new Class 7 tractor is the company's response to the growing customer need for a powerful intra-city vehicle, Rupp says it is "ideally positioned to fill a void that has long existed in urban and medium-range hauling."

The outlook for its market penetration is bright, according to Rupp, given the forecasts that the dieselization rate for medium-duty trucks will continue to grow over the next four years.

The LPS 1525 is designed specifically to operate in the Class 7 market niche that requires the innovated application of new haulage techniques in terms of route scheduling and carrier-hub operations.

"The vehicle is ideal for truck applications in such areas as container movement, LTL and TL shipments," says A. Gordon Clark, senior vice president of sales and marketing.

He said the vehicle is also well suited for pickup and delivery operations including such applications as beverage, newspaper and dairy product hauling, as well as general intercity freight distribution and refrigerated transport operations.

The LPS 1525 is assembled at Mercedes-Benz Truck Co.'s Hampton, Va., plant.

The vehicle is assembled from semi-knocked-down (SKD) units. The cab, engine, transmission and steering unit come from Daimler-Benz in West Germany. The chassis frame, front and rear axle assemblies, and springs are shipped from Brazil. A significant number of parts are procured directly from North American suppliers.

Powering the 66,000-pound GCW truck is a turbocharged Mercedes-Benz 250-horsepower diesel engine, the OM 429 LA, with air-to-air intercooling.

Its 608 cubic-inch displacement has a maximum torque output of 782 foot-pounds at 1,200 rpm. Wet cylinder sleeves, replaceable valve guides and seats, oil-cooled pistons, and individual cylinder heads minimize service requirements.

The turbocharger allows the engine to operate in any altitude without significant loss of power. The fuel system features as standard a 75-gallon fuel tank and a fuel-water separataor.

A fully synchronized Mercedes-Benz transmission features a six-speed main box with two-speed overdrive splitter. An overspeed buzzer warns drivers if they attempt to shift into a wrong gear. A 16.5-inch single-plate hydraulically actuated clutch facilitates shifting.

The front axle has a rated capacity of 12,000 pounds and features large diameter, greasable kingpins. The rear axle is rated at 21,000 pounds GAWR, and has a reduction ratio of 4.3:1. The hypoid gear arrangement allows for lighter weight of the total axle and permits high ground clearance.

Mercedes-Benz says it is the only Class 7 tractor to feature two shock absorbers, anti-sway bars and semi-elliptical leaf springs on both front and rear suspension systems as standard equipment.

The tractor's front-wheel cut of 50 degrees results in a 20-foot turning radius.

Goodyear 11R22.5 14-ply Unisteel II radial tires and steel disc wheels are standard equipment.

The dual-circuit, full-air cam-type brake system includes as standard equipment an alcohol injection system to protect against moisture build-up and freezing in cold weather conditions, and the frame-mounted air tanks feature an automatic moisture ejector. Automatic slack adjusters eliminate the need for manual brake adjustment, and extend brake life.

The aerodynmic design of the cab is further refined by two front-mounted polyurethane air deflectors. The windshield and large side and rear windows provide an all-around 286-degree visibility range. Quad halogen lights are standard.

Inside, an orthopedically designed, eight-way adjustable, foam-filled driver's seat is upholstered in heavy-duty vinyl. In addition to the heating and defrosting system, the tractor has a five-way adjustable roof ent.

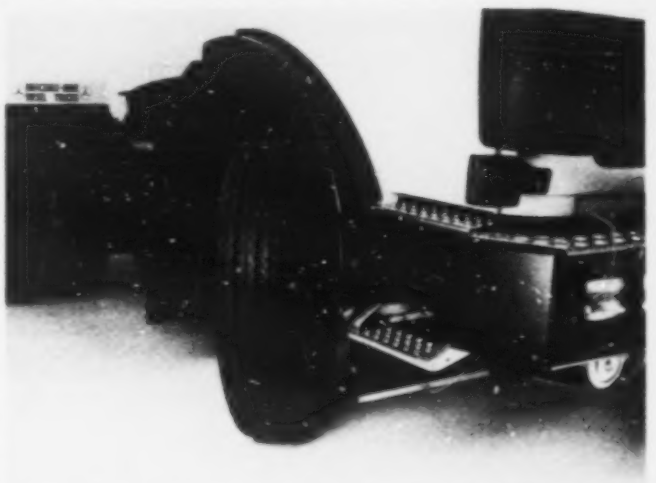
The cab, with the aid of a hydraulic pump mounted on the frame rail, tilts to a 65-degree angle.

Two hinged front panels allow easy access to all daily service points including windshield washer reservoir, oil and water check and fill, clutch master cylinder reservoir, and powr steering fluid container.

The warranty coverage features 18 months/unlimited mileage on the vehicle, 36 months/100,00 miles on the engine and powetrain, and 24 months/100,000 miles for cab corrosion.

Mercedes-Benz Truck Co. has more than 200 dealers, supported through seven parts distribution centers in North America. The LP 1525 became available through dealers starting in mid-April.

Mercedes-Benz Truck Co. is a wholly owned subsidiary of Freightliner Corp., headquartered in Portland, Ore.



A 50-degree front-wheel cut permits turning in a 20-foot radius. Goodyear Unisteel II radial tires are standard.

Peterbilt, Mack lead

In 1984 registrations per dealer outlet

Peterbilt Motors Co. led medium and heavy-duty truck manufacturers in 1984 registrations per dealer outlet.

The Class 8-only truck maker averaged 113 registrations per outlet, an increase of 63.77 percent over the 69 registrations per outlet it recorded in 1983. Peterbilt had 116 retail outlets as of January 1, 1985, the same number it had at the start of 1984.

Mack Trucks, Inc. finished 1984 just behind Peterbilt as its dealers averaged 105 registrations per outlet during the year, up from 62 registrations per outlet during 1983.

In third place was Kenworth Truck Co. Its dealers averaged 101 registrations per outlet during 1984, compared with 64 the previous year.

Overall, medium and heavy-duty truck dealers averaged 17 registrations per outlet in 1984, up 41.66 percent from the 12 registrations per outlet calculated a year earlier.

As of January 1, 1985 there were 14,626 medium and heavy-duty truck dealerships in the U.S. compared with 14,683 a year earlier.

—Arthur Flax

Market share also climbs in January

Import registrations rise for month

By Jenny L. King
Detroit Reporter

Imports advanced slightly, January to January, in their share of the total U.S. new-car market. They were off 0.87 percentage points from December, 1984, according to figures compiled by R. L. Polk & Co.

New imported-car registrations numbers were up 6.87 percent in January, to 208,340 from 194,947 a year earlier. Import market penetration of 26.41 percent was up from 26.09 percent last year and was down from December, 1984, when imports accounted for 27.28 percent of the total.

The record for January was 31.21 percent in 1982.

Despite a drop of 0.77 percentage points year to year, Toyota held on to first place among the major imports, edging out Honda by less than 1,000 cars. Toyota had 20.24 percent of the January import market, Honda earned 19.87 percent and Nissan had 18.18 percent. Honda was up from 19.29 percent a year earlier, Nissan was down 0.08 percentage points from 18.26 percent.

Subaru moved up to fourth place from sixth place, and Volkswagen dropped to sixth from fourth. The European makers all enjoyed greater penetration year to year: Volvo was up 0.26 percentage points, Mercedes was up 0.14 percentage points, BMW was up 0.13 percentage points and Audi climbed 0.30 percentage points.

The Top Ten makes claimed 88.84 percent of the import segment, down from 88.98 percent a year earlier.

Japan, by far the biggest supplier of imported cars, was responsible for 72.35 percent of new registrations in January, down a bit from 73.24 percent in 1984. West German cars accounted for 13.24 percent, up from 12.29 percent. U.S.-built Hondas and VWs, listed in Polk figures as imports, slipped to 7.42 percent from 7.49 percent of the market, and Swedish Saabs and Volvos represented 5.14 percent, up from 4.74 percent in 1984.

Numbers of new cars from the eight countries of origin include:

	Jan. 1985	Jan. 1984
Japan	150,724	142,777
W. Germany	27,582	23,956
United States	15,502	14,593
Sweden	10,702	9,238
France	2,008	2,626
Britain	1,450	1,465
Italy	372	268
Ireland	—	24

New imported truck registrations were up 44.97 percent in January, to 70,720 from 48,784 last year. Totals from the major makers follow:

	Jan. 1985	Jan. 1984
Toyota	27,078	19,770
Nissan	20,651	11,496
Mazda	8,511	8,252
Isuzu	4,308	—
Dodge Ram 50	—	2,818
Others	10,172	6,448
TOTAL	70,720	48,784

New York and Oklahoma figures based on manufacturers' sales reports.

Residents: St. Louis suburb has enough auto dealerships

ST. LOUIS—Residents of suburban Ellisville, Mo., have indicated in a poll that the city has enough auto dealerships, Mayor Edward M. O'Reilly said.

The survey was sent out with 1985 city calendars and returned by more than half of the 2,000 home owners. According to survey results, 870 responded negatively.

The town has six car dealerships.

"I have nothing against the dealers we have in Ellisville," O'Reilly said. "They're good businessmen and good neighbors and they provide service and employment. But all that the dealerships pay the city is a regular business license and possibly extra utility taxes, above the normal type of operation."

However, he pointed out that "by the nature of their business, we have to spend quite a bit of police time there, much more than at other businesses."

Mayor O'Reilly has been seeking state legislation to amend a law that credits local sales tax on auto sales to the municipality of the purchaser, not the seller.

Not resolved, however, is the question of Ford Motor Co. being able to divide a 9-acre tract into two dealerships—one already occupied by Bo Beuckman Ford and the second to a new Lincoln-Mercury point. Before Bud Anderson sold out, there were Ford and AMC dealerships there together.

O'Reilly has urged the Board of Aldermen to turn down Ford's petition and approve the advisory vote of the citizens against expanding the total of dealerships.

Japanese exports to U.S. up 4.6 percent in February

WASHINGTON.—Japanese manufacturers exported 198,644 vehicles to the U.S. in February, a 4.6 percent gain over the 189,845 units shipped to the U.S. in the year-ago month, according to the Japan Automobile Manufacturers Assn.

Passenger-car exports to the U.S. fell 4.1 percent from 138,183 to 132,458; truck shipments jumped 28.1 percent from 51,662 to 66,185, and one bus was sent from Japan to the U.S. in February, 1985, compared with none in the year-ago month.

Vehicle exports during the first two months of the year were up 11.2 percent over the comparable 1984 period—393,781 versus 354,082.

Japanese makers produced 974,473 motor vehicles in February, a slight gain of 0.4 percent over the 970,743 units built in the year-ago month.

The February production total includes passenger cars, up 1.1 percent; trucks, down 1.4 percent, and buses up 42.1 percent from the prior year.

During January and February, 1,872,653 vehicles were produced in Japan, compared with 1,804,784 in the first two months of 1984—an increase of 3.8 percent.

Sales in Japan's domestic vehicle market registered a 1.9 percent gain during February, increasing from 444,369 last year to 452,679. Passenger-car sales were up 1.0 percent, at 255,325 compared with 252,827.

Truck sales rose 2.9 percent, while bus sales climbed 18.6 percent in February, 1985.

Vehicle sales in Japan for the first two months of 1985 were 744,532 units, leading the 723,917 in the year-ago period by 2.8 percent.

Driving courses don't prevent accidents, studies show

SCHAUMBURG, Ill.—The National Safety Council's Defensive Driving Course (DDC) does not decrease the likelihood of motor-vehicle crashes, according to an Insurance Institute for Highway Safety report discussed in the Journal of American Insurance.

Many insurers voluntarily provide auto insurance discounts to drivers who complete an approved defensive driving course. In Delaware, New York and Texas, insurers are required by law to provide such discounts, according to the Journal.

But the IIHS report, which evaluated studies of DDC, said that the course "had no effect on crashes and decreased the frequency of traffic violations only slightly," the Journal said.

Crash rates for DDC drivers ranged from 12 percent lower to 25 percent higher than rates for comparison drivers. None of the crash differences were statistically significant, the Journal said.

The IIHS study said that the course does seem to impart information about better driving techniques, the Journal reported.

But some drivers are unwilling or unable to change their driving techniques to reduce the possibility that they will crash, according to the Journal.

Some drivers take the course by order of traffic courts or their employers; to remove violation points from their licenses, or to obtain discounts on their insurance. Those drivers may have little intention of changing their driving techniques.

Drivers may also sometimes find it difficult to comply with the course's recommended driving techniques. For example, it may not be possible to maintain recommended following distances in high-density commuter traffic, according to the Journal.

The Journal also reported that a study of 16,000 Georgia high school students published last year by NHTSA showed that neither a 70-hour driver education course emphasizing safety nor a less-formal driver training course resulted in lower crash involvement or decreased traffic violations.

Another major study conducted by a New England insurer also concluded that high school driver training programs have little long-term effect on teenagers' involvement in auto accidents, the Journal said.

The insurer's study reported, "Driving safety appears to be far more dependent upon motivational and attitudinal factors than upon knowledge and skill," the Journal said.

Statistics do not show that the successful completion of DDC or a high school driving program warrants a mandatory auto insurance discount, the Journal concluded.

Toshiba names Audiovox cellular phone distributor

HAUPPAUGE, N.Y.—Audiovox Corp. and Toshiba Corp. have announced that Audiovox has been named the exclusive distributor of two cellular telephone models, the CMT-3000 and CMT-3500, for the U.S. and Canadian markets.

The CMT-3000 will be available through auto dealers and retail auto sound/security specialists.

Revived by Sable/Taurus work

From grave to cradle for A.O. Smith plant

GRANITE CITY, Ill.—From the grave to the cradle.

That's the story of the rebirth of the A. O. Smith factory which, after closing in 1980, is on the verge of building an expected 2.5 million engine cradles for the Mercury Sable and Ford Taurus models.

Smith has also been tapped to manfacture the full frame for the 1987 Chrysler Corp. N pickup truck.

Production work for the 1986 Sable/Taurus is scheduled to begin around mid-May. Work on the cradles will begin with a trickle and the employment rolls will rise sharply from the initial 65 to 500-550 in the next two years, according to Stan Linquist, vice president in charge of operations. The company once employed 2,000 people.

The plant closed in 1980 when General Motors, the sole customer for Smith's full frames, announced that its down-sizing would eliminate the need for larger components.

Ford Motor Co. has been working with Smith on the engine cradles for 3½ years.

Lewis C. Veraldi, Ford vice president of luxury and large car engineering and planning, said Smith was chosen as the sole supplier "because of its reputation for quality."

"Normally, you establish suppliers a year before production," Veraldi said. "We went to Smith 3½ years ago. Quality is the cornerstone of the program."

At the plant reopening, Veraldi was joined by a dozen Ford production executives, including John A. Manoogian, executive director, product assurance, North American Automotive Operations.

Smith provided cakes with Sable/Taurus design and even an ice carving of the new car.

Granite City, county and state officials, also turned out for the reopening. Also present were executives of Granite City Steel, a division of National Steel, which will furnish just-in-time metal.

A. O. Smith has spent more than $50 million in modernizing the plant and has been helped by industrial bonds and grants.

Hoover revamps Canadian unit; plans to expand

ANN ARBOR, Mich.—Hoover Universal, Inc., is reorganizing its Canadian subsidiary, Hoover Universal of Canada, and plans to expand its business in Canada.

John F. Daly, chairman and chief executive, said the reorganization will enable Hoover to add interior trim capability and expand its automotive seating business in Canada to include metal seating frames as well as complete seating using the just-in-time delivery system.

Hoover's plant at Tillsonburg, Ont., currently provides polyurethane foam automotive seating pads to auto makers in Canada and in the U.S.

Edward V. Hagopian, currently a vice president in Hoover Universal's Automotive Seating Division, has been named chairman and chief executive officer of Hoover Universal of Canada. Nicholas G. Grabb, currently plant manager of the Hoover facility at Tillsonburg, has been named president and chief operating officer.

New address

GE Credit buys South Seattle auction

BARRINGTON, Ill.—General Electric Credit Corp. has expanded its auto leasing and financing activities to include redistribution by purchasing the South Seattle Auto Auction, Kent, Wash.

The South Seattle Auto Auction, with four operating auto lanes, serves Washington, Oregon, Montana and Hawaii. It employs about 150 people.

Dealer meets Reuss

Alvin G. Beaman, left, Beaman Automotive Group, and Lloyd E. Reuss, group executive in charge of General Motors' Chevrolet-Pontiac-GM of Canada Group, met at Beaman Pontiac, Nashville, when Reuss was in town to speak at Vanderbilt University.

Reuss discusses business with Pontiac dealer

NASHVILLE.—Lloyd E. Reuss, group executive in charge of General Motors' Chevrolet-Pontiac-GM of Canada Group, and Alvin G. Beaman, Beaman Automotive Group, met when Reuss was here to speak at Vanderbilt University's Owen School of Management.

They discussed dealer needs, availability of Pontiac models and other matters including GM's Customer Service Index program.

Reuss toured Beaman Pontiac and met with the officers of Beaman Automotive Group, as well as many of its employes.

"We are quite flattered to have Lloyd Reuss tour our facilities," Beaman said. "It really says something about the leadership of General Motors when its top executives take a hands-on approach to see what makes a dealership such as ours successful."

Beaman Automotive Group consists of Pontiac, Toyota, Mitsubishi, Nissan and Rolls-Royce dealerships.

Beaman Pontiac has been awarded Pontiac's 5 Star Service Award for outstanding performance in all phases of customer service for eight consecutive years.

Building the redesigned Escort/Lynx

Employes at Ford Motor Co.'s Wayne (Mich.) plant are building 1985½-model Ford Escorts and Mercury Lynxes. The cars have new sheet metal and aerodynamic headlamps. They will be powered by a new 1.9-liter, 4-cylinder engine. Also producing the redesigned models are Ford's plants in Edison, N.J., and Oakville, Ont.

Imports' 27-day inventory is lowest since November

Continued from Page 1

days-supply level from 95 days to 66.

The Merkur's high inventory is typical of new-model launches.

Renault hiked its sales a bit, but not enough to get its imports into the normal range.

The figures in the accompanying chart have been revised to show combined days-supply figures for all Hondas, whether built in the U.S. or Japan; previous breakouts of domestic and import figures supplied by American Honda did not accurately portray the split.

In addition, Isuzu and Porsche inventories have been increased by 10 days to reflect port inventories and vehicles enroute to dealerships. Previous figures supplied by those companies included only dealer inventories. Mercedes-Benz figures also have been updated for the same reason.

The April 1 inventory was split this way: Japanese makes, 49.72 percent; German, 34.86 percent, and other countries, 15.42 percent. One month earlier, the split was Japanese, 53.07 percent; German, 34.67 percent, and other countries, 12.26 percent.

Japanese cars averaged an 18-day supply on April 1. The makes and their days-supply figures: Toyota and Honda, each 10; Mazda, 11; Mitsubishi, 13; Subaru, 19; Nissan, 23; Isuzu, 39.

There was a 42-day supply of Chrysler import cars: 35 for Dodge Colt, 40 for Plymouth Colt, 43 for Dodge and Plymouth Vista, 99 for Plymouth Conquest and 110 for Dodge Conquest.

Chevrolet captives averaged a 79 day supply: 42 for Sprint and 91 for Spectrum.

German makes averaged a 60-day supply. The breakout: Mercedes-Benz, 47; Porsche, 49; BMW, 59; Volkswagen, 66; Audi, 70; Merkur, 81.

Imports from other countries averaged 51 days. The breakout: Jaguar, 20; Saab, 42; Volvo, 48; Maserati, an estimated 60; Peugeot, 61; Alfa Romeo, 65; Renault, 179.

As noted, the days' supply of imported trucks averaged 33 days: 12 for Mazda, 16 for Mitsubishi, 26 for Toyota, 35 for Nissan; 38 for Chrysler and 90 for Isuzu. The big drop in Mitsubishi's inventory level was largely a result of a large sales increase during the month.

C-P dealer pledges funds for Lady Liberty

WARMINSTER, Pa.—Tony Gallagher, Gallagher Chrysler-Plymouth Co., has contributed $102 to the Statue of Liberty Restoration Fund.

Gallagher has pledged to donate $1 to the fund for every unit he sells. During February, he sold 102 vehicles.

Joint venture will build cars in U.S.

Chrysler, Mitsubishi make it official

Continued from Page 1

venture, Iacocca said, "Nobody fought harder than us to keep VRA in place. We lost. It is now the policy of the U.S. Government to increase the ratio of imports of Japanese cars."

Iacocca also pointed out that the reason Chrysler came to MMC for a small car design was that it had no technology of its own.

"Chrysler borrowed it from Simca," he said. In fact, the Horizon was designed in the U.K. and in France by what was then Chrysler Europe.

That this will be completely an MMC product was borne out by Iacocca's comments on his product planning meeting on Tuesday and also by his statement that the engine and transmission would be imported fully built-up.

Nevertheless, Iacocca hailed the deal as good for the U.S.

"The new plant will directly employ 2,500 people," he said, "And another 9,000 jobs will be created for suppliers."

He expects the local-content ratio to be about 50-50, and he said that as a result of this project, Chrysler would be able to give consumers a cheaper car because the powertrain is imported.

MMC will provide the general manager for the plant and also will select the site, negotiate with the unions and control day-to-day operation.

Iacocca cited the following reasons for MMC getting this slice of the action: "They run pretty good plants and we hope that they will be able to get rid of the Dark Ages union work rules and job classifications. Success will depend a lot on the unions and on training."

Iacocca also called for Japan to unilaterally reduce the trade deficit by whatever means it liked. He suggested a figure of $30 billion might be a good target, but indicated that he did not think the U.S. auto industry could do much about it.

He said he sees no prospect of increasing sales of U.S. cars in Japan, both because of high prices and because he thinks U.S. cars cannot be adapted suitably for Japan.

Iacocca said at the same time he was puzzled why the Chrysler minivan did not sell in Japan (two were sold here last year) because he considers it a unique product. Both Nissan and MMC build vehicles which are similar to the Chrysler minivan and neither of those has sold well, averaging around 12,000 units each a year.

Iacocca said that the new car would cost $500 less than would a totally American product. He said the Japanese have an advantage of $2,000 per car over U.S. companies and in his view a big proportion of this comes from the high price of the dollar and tax advantages.

Iacocca said he feels that one way the U.S. can reduce the gap is to switch to a form of value-added tax, although such a tax is not in force in Japan. He said that a fair value for the dollar is one dollar equaling 180-190 yen. In 1983, when the dollar bought 237 yen, the trade balance was worse than in 1982 when the exchange rate averaged 249 yen per dollar, however.

Also covered in the discussion was the Liberty project, which Iacocca explained was based on modules, with the target of reducing production costs by $2,000.

"After 26 months, we have taken $900 out of the cost," he said, adding that he expected cars of this general type to come into production in about 1990.

Although he did not say so directly, Iacocca indicated that the MMC car built in the U.S. would be based on conventional lines. He said that he expected the car to be sold in Canada as well as in the U.S.

Idaho high court upholds AMC in cancellation

BOISE.—The Idaho Supreme Court has upheld American Motors' cancellation of an Idaho dealer's franchise. It found no evidence that the cancellation was the result of coercion, intimidation, or discrimination against the dealer.

Christensen Motor Sales, Inc., alleged that American Motor Sales, Inc., violated state law when the auto maker terminated its franchise agreement. The court granted summary judgment in favor of AMC.

Christensen entered into a franchise agreement with AMC in May, 1978, in which the manufacturer stipulated its participation was contingent on the continued participation of three named individuals as owners and managers. AMC also reserved the right to cancel the franchise upon the death or incapacity of any of those individuals, after certain time limits.

In August, 1978, one of the named owner/managers died. AMC wrote Christensen a letter the following month advising the dealership of its intention to cancel the franchise.

The court observed that Christensen conceded that "the contract specifically allows American Motors to cancel under the existing circumstances." The court described the contract as "unambiguous."

Lubienski promoted by Kelsey-Hayes

DETROIT.—Robert A. Lubienski has been promoted to vice president, manaufacturing, brake opertions, Automotive Group, Kelsey-Hayes Co.

Lubienski, who joined Kelsey-Hayes in 1979, was most recently manager of the Mount Vernon (O.) plant.

Senate committee approves tight curb on gray market

Continued from Page 2

trucks, vans and multipurpose passenger vehicles within a year after enactment.

The provision would not require dynamic testing, which had become a thorny issue. This is the standard which former NHTSA Administrator Joan Claybrook had underway but which was shelved by the Reagan Administration.

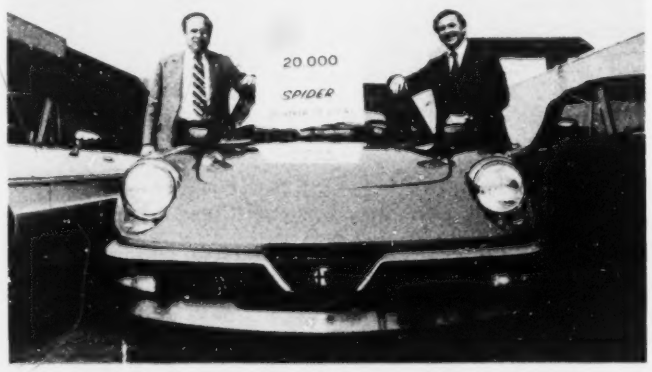
The Danforth bill authorizes money for NHTSA for the two safety laws as well as the consumer information and cost savings law, which includes among other duties setting CAFE standards. Appropriating money is done separately by another committee.

The most controversial part of the authorization bill deals with the setting of a standard rating cars for their crashworthiness and labeling them. NHTSA would have to develop a uniform numerical rating system so consumers could compare the degree of occupant protection of various models.

NHTSA currently crashes single models at 35 MPH (5 MPH above the compliance speed but at about one-third greater energy) and releases the data for head injury, chest deceleration and femur loads on belted and instrumented dummies. The data should be compared only for similar weight and size cars, but even then companies sometimes complain about using a single test and question it on grounds of repeatability.

Those high-speed crashes also include data on three standards—windshield mounting, windshield intrusion and fuel system integrity—and the Danforth bill would also include those and possibly others. In addition, the bill would require data on crash protection both for belted and unbelted occupants.

The Danforth bill would also reinstate publication of such data in a form similar to the Car Book, a creation of Claybrook that was scrubbed by the Reagan Administration.



20,000th Alfa Romeo Spider for U.S.

Don Agnelli, dealer principal, European Auto Imports, Santa Clara, Calif., and Joseph E. Cooley Jr., national sales and marketing director of Alfa Romeo, Inc., flank the 20,000th Alfa Romeo Spider to be delivered to the U.S. The car was first imported to the U.S. in 1967.

185,763 cars scheduled, highest total of 1985

Week's auto output moves upward

By Louise Kertesz
Detroit Reporter

Targeting production of 185,763 cars last week, U.S. auto makers again scheduled their highest weekly build of the year.

Last week's output was 1.94 percent more than the previous week's 182,223, which fell some 5,000 units short of the projection.

Last week's production was also 46.41 percent more than the 126,712 for the year-ago week, which included the Easter holiday.

Year-to-date production of 2,690,455 cars has again shot ahead of the 2,650,126 assembled last year at this time.

Last week's estimated production was shared as follows: General Motors, 59.45 percent; Ford Motor Co., 19.43 percent; Chrysler Corp., 15.77 percent; American Motors, 2.02 percent; American Honda, 1.78 percent; Volkswagen of America, 1.08 percent; Nissan Motor Mfg. Co., U.S.A., 0.25 percent, and New United Motor Mfg. Co., Inc., 0.22 percent.

Honda's plant in Marysville, O., worked four hours' daily overtime last week.

GM scheduled two overtime shifts Saturday (April 20) at the following plants: Pontiac G; Detroit; Fairfax, Kans.; Janesville, Wis.; Lakewood, Ga.; Leeds, Mo.; Lordstown, O.; Oklahoma City, and Wilmington, Del..

One overtime shift was scheduled Saturday at GM's Wentzville (Mo.) plant.

Ford has scheduled daily overtime this week (April 22) at its plants in Atlanta; Chicago; Lorain, O.; Wixom, Mich.; Edison, N.J.; Wayne, Mich., and Kansas City.

Chrysler has scheduled two 9-hour daily shifts this week at its plants in Belvidere, Ill., Newark, Del., and St. Louis (Nos. 1 and 2).

Chrysler's Jefferson (Detroit) plant is scheduled to operate two 8½-hour daily shifts this week.

EPA orders GM to fix engines in 'offset' case

WASHINGTON.—General Motors has been put on notice by EPA that it must correct an emissions control defect on more than half a million 1979 GM cars with Pontiac engines or else face action that could potentially mean fines of as much as $10,000 per vehicle.

GM has been told to produce a plan to correct those engines for excess NOx emissions by May 6 or face unspecified consequences.

This is the long-running "offset" case which EPA lost before the federal appellate court in the District of Columbia last October. Involved are 570,000 vehicles with Pontiac 4.9-liter (301-CID) V-8 engines.

EPA had ordered the recall on Dec. 9, 1980, at the end of the Carter Administration. In February, 1981, after the Reagan Administration took over, GM submitted a proposed fix, but this did not remedy the problem.

GM and EPA then discussed the possibility of a plan for offsetting the excess emissions of the 4.9-liter V-8s by producing some 2.3 million vehicles with 2.5-liter Pontiac engines to meet a more-stringent NOx level. GM submitted a final offset plan on July 2, 1982 and on July 29, 1982, EPA accepted it.

But on Sept. 3, 1982, the Natural Resources Defense Council and the Center for Auto Safety took EPA to court, saying EPA did not have the authority to approve the GM offset plan. More than two years later, the court agreed and told EPA the law requires recall and repair as the only statutory remedy.

EPA is just now getting around to disapproving the GM offset plan of July, 1982, but it is warning GM that in view of the amount of time which has passed since EPA ordered the recall on Dec. 9, 1980, GM must submit its remedial plan promptly or EPA "will consider whatever action might be appropriate." Presumably, this means court action.

Millionth truck produced 7 days ahead of 1984

Domestic makers scheduled production of 68,723 trucks last week, 3.60 percent fewer than the 70,825 assembled the previous week, which was the best production week since June, 1979.

The previous week's actual production was a range makers had aimed at—but fallen short of—for several weeks since mid-March.

Last week's estimated output was 41.80 percent more than the build for the year-ago holiday week: 48,466 units.

The millionth truck of 1985 was built Tuesday, April 16, seven days ahead of 1984.

So far this year, 1,050,629 trucks have been assembled, 6.87 percent more than the 983,135 built last year at this point.

American Motors lost production last week due to vandalism at its Toledo plant.

The company had been scheduling more than 4,000 units for full work weeks since the beginning of the year. At presstime, the Jeep schedule for last week was 3,000 units, but that figure was probably optimistic.

General Motors scheduled two overtime shifts Saturday (April 20).

One overtime shift was scheduled Saturday at GM's plants in Detroit and Flint (No. 2).

Daily overtime is scheduled for all Ford Motor Co. plants this week (April 22).

Overtime is scheduled for Saturday, April 27, at Ford's Twin Cities plant.

Chrysler Corp. has scheduled two 9-hour daily shifts this week at its plant in Warren, Mich.

Canadian makers schedule 25,028 cars for week

Last week, for the second consecutive week, Canadian auto makers targeted the highest weekly production so far this year.

Makers scheduled 25,028 units for the week, which would top the output for the week ended Jan. 12, when 23,068 cars were assembled.

Last week's expected build was 11.98 percent higher than the previous week's 22,350, which fell 1,172 cars short of the projection.

Last week's output was 33.38 percent more than the year-ago week's 18,765 (for a four-day week).

So far this year, 307,587 cars have been assembled, 12.79 percent less than the 352,702 completed last year at this point.

Truck makers expected to build 18,901 units last week, about the same (down 0.15 percent) as the previous week's 18,872 and 45.48 percent more than the year-ago week's 12,992.

Year-to-date, 279,239 trucks have been built, 6.10 percent more than the 263,183 assembled last year at this point.

Chrysler's Windsor (Ont.) plant scheduled production of 2,670 Plymouth Voyagers, 2,826 Dodge Caravans and 612 Mini Ram Vans last week, bringing the T-115 total for the year to 89,939.

MVMA names Curran

DETROIT.—Dennis P. Curran has been named economic analyst in the policy analysis department of the MVMA. He will design and implement a computer statistical data base for the department's regularly issued reports.

60TH YEAR—NO. 5072

Automotive News (ISSN 0005-1551) is published weekly except semi-weekly fourth week in April at 1400 Woodbridge Ave., Detroit, Michigan 48207. Second-class postage paid at Detroit, Michigan, and at additional mailing offices.

PRODUCTION

Nineteen eighty-four was the third year of rebuilding for the world's vehicle industry, as production in the major vehicle-producing countries rose 4 percent.

The big gains were registered in North America, where combined U.S. and Canadian output rose 16 percent, and in Latin America, where a 15-percent gain was reported. Smaller gains were made in Eastern Europe (2 percent) and Asia/Oceana (4 percent).

Western Europe was the only region to decline (4 percent). Four of Europe's five biggest auto making nations were the only major countries in the world to reduce vehicle output: France, Germany, U.K. and Spain.

The year was better, too, for 10 of the world's top vehicle producers; only Fiat and Peugeot SA reduced output. Rankings of the Big 12 stayed the same with the major exception of Chrysler Corp., which jumped from ninth place to seventh.

12 LEADING MOTOR VEHICLES PRODUCERS WORLDWIDE

	1984	1983	1982	1981
General Motors	8,256,000	7,769,000	6,244,000	6,762,000
Ford Motor Co.	5,584,651	4,934,231	4,267,587	4,402,462
Toyota	3,429,249	3,182,614	3,155,784	3,254,942
Nissan	2,481,686	2,462,436	2,557,269	2,811,580
Renault	2,362,300*	2,237,185	1,992,985	1,527,000

* Includes 1,980 Aries, 2,410 Reliants built in Mexico.

Last year's 9.35-percent increase in U.S. auto production was enough to bring the U.S. industry's calendar-year output to its highest point in five years: 7,777,721 units.

Chrysler Corp. upped its U.S. auto output the most: 348,663; followed by General Motors, 309,982, and Honda, 83,241. New United Motors began Nova output.

The other U.S.makers cut auto output: Ford Motor Co. by 44,930; Volkswagen of America, 23,422, and American Motors, 8,185.

PRODUCTION

Production of autos in Canada jumped 10 percent in 1984 to its highest level in six years and the eighth-highest total in history.

Canada produced 1.06 million autos last year, compared to 968,774 in 1983. It was the most since 1978, when 1.13 million were built. The record was in 1976: 1.14 million.

The year-to-year increase is even more impressive than appears at first glance because during 1983 Chrysler Corp. switched its Canadian assembly plants from production of autos to minivans, which are counted in the truck totals (found on Page 16).

Ford Motor Co. was the biggest contributor to last year's increase. Its 70-percent increase in Canadian auto output was worth 190,654 units. General Motors increased its Canadian output 13,631 units, or 2 percent; Volvo was stable, and American Motors fell 6,559 units, or 25 percent.

Grand Total All Registrations	10,118,231	8,924,186

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. New York and Oklahoma 1984 registrations compiled from manufacturers' sales records. Oklahoma 1983 figures not available.

Registrations of new cars in the U.S. climber 13.38 percent in 1984 to their highest level in five years. The domestic-car total rose 17.46 percent to 7.60 million; imports, 2.65 percent to 2.52 million.

Each of the Big Three increased its figures during the year; American Motors and the miscellaneous domestics—Excalibur and Avanti combined—lost ground.

(Total Shipments—747,500)

Travel Trailers	250,800
Truck Campers	195,100
Camping Trailers	110,200
Motor Homes*	116,800
Pickup Covers	164,600

**—Pickup covers no longer included in RVIA shipments.

1983**
(Total shipments—358,000)

Travel trailers	90,000
Truck campers	6,800
Folding campers	37,500
Motor homes	69,500
Multi-use vehicles	154,200

1980**
(Total shipments—181,400)

Travel trailers	51,900
Truck campers	5,000
Fold-down camping trailers	24,500
Motor homes	28,600
Multi-use vehicles	71,400

1977
(Total shipments—745,600)

Travel trailers	167,900
Truck campers	31,900
Fold-down camping trailers	53,900
Motor homes	280,200
Pickup covers	211,700

1974
(Total Shipments—529,200)

Travel Trailers	126,300
Truck Campers	45,400
Camping Trailers	55,200
Motor Homes*	68,900
Pickup Covers	233,400

1971
(Total Shipments—549,400)

Travel Trailers	190,800
Truck Campers	107,200
Camping Trailers	95,800
Motor Homes	57,200
Pickup Covers	98,400

1982**
(Total shipments—258,000)

Travel trailers	65,500
Truck campers	5,700
Folding camping trailers	34,300
Motor homes	41,200
Multi-use vehicles	111,300

1979**
(Total shipments—303,300)

Travel trailers	90,200
Truck campers	13,800
Fold-down camping trailers	31,100
Motor homes	64,100
Multi-use vehicles	104,100

1976
(Total shipments—656,300)

Travel trailers	189,700
Truck campers	42,000
Camping Trailers	53,300
Motor Homes	156,100
Pickup Covers	215,200

1973
(Total Shipments—752,500)

Travel Trailers	212,300
Truck Campers	89,800
Camping Trailers	97,700
Motor Homes*	129,000
Pickup Covers	223,700

1970
(Total Shipments—472,000)

Travel Trailers	138,000
Truck Campers	95,900
Camping Trailers	116,100
Motor Homes	30,300
Pickup Covers	91,700

*—Imports of Volkswagen Campmobile Motor Home included in 1972-1974 totals only.

Domestic-sponsored imports are included with total imports and excluded from domestic sales.
Beginning January, 1980, passenger vans previously reported as passenger cars are included with trucks.
SOURCE: Motor Vehicle Manufacturers Association of the U.S., Inc.

U.S. truck retail sales in 1984 were the second highest ever and just 15,000 units shy of the 1978 record. Last year's total of 4,092,379 was 31 percent higher than the 1983 total.

Ford was the leader for the second year in a row and the for the seventh time in the last eight years. Its total: 1,166,715, up 18 percent from its 1983 sales.

U.S. compact-truck sales climbed 52 percent to a record 1,723,044 units. Sales in all weight segments topped '83 levels.

RV shipments climbed for the fourth straight year to their highest level since 1978: 398,200 units.

1985 MODEL DOMESTIC CAR BODY FAMILY DESIGNATIONS

The family trees of domestic cars are listed on this page and on Page 44, along with photos depicting each family line. Of the domestics, only the Big Three group and name their automobiles by families; Volkswagen of America, Honda and American Motors do not.

For the 1985 model year, Chrysler Corp. added one family: Its H-body Lancer and LeBaron GTS. That brought its family count to nine. Within those nine were 52 different models of automobiles, up from 45 at the close of the 1984 model year.

Ford Motor Co.'s domestic family members stayed unchanged at seven, and, in accordance with its new policy of deproliferation, its lineup was trimmed from 82 models to 74.

General Motors added its N-car line: Pontiac Grand Am, Oldsmobile Calais and Buick Somerset Regal, bringing its number of domestic-car family lines to 14 for '85. It, too, trimmed its model count: From 157 to 140. Details on domestic model numbers can be found on Page 49.

PRICES

Retail prices, 1985 U. S. models

This table shows 1985 domestic prices in effect March 31, 1985, and rounded off to the nearest dollar. All prices are Manufacturer's Suggested Retail Prices. They do not include destination charges, state and local taxes, optional equipment or any other charges that may be passed on to the local buyer. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

Notes: (1) Excludes CKD kits which totaled 156,800, up 39.4 percent from the previous year. (2) Excludes CKD kits which totaled 224,740 up 39.8 percent from the previous year. (3) Includes automobiles, not motorcycles. (4) Includes 162,220 CKD kits. (5) Includes 69,500 CKD kits. (6) Includes 32,850 CKD kits. (7) Parent company of Subaru of America. For its 1984 fiscal year ended Oct. 31, 1984 net income for Subaru, an importer and distributor, amounted to $60 million, up 21.2 percent from the previous year. Sales totaled $1.2 billion, up 11.1 percent from 1983. Dollar figures translated at the current rate during the fiscal period; approximately 235 yen equals $1. Unit sales represent passenger cars only.

Overseas vehicle makers, coachbuilders

Following is a list of overseas makers of production cars and trucks and coach builders. See Automotive Industry Roster, which begins on Page 129, for U.S. and Canadian companies.

A.C. CARS LTD., Summer Road, Thames Ditton, Surrey KT7 ORD, Great Britain. Products: Race cars.

ADAM OPEL AG, 6090 Russelsheim, Federal Republic of West Germany. Parent company: General Motors Corp. Products: Opel passenger cars

ALFA ROMEO S.p.A., Arese, Milan, Italy. Products: Alfa Romeo cars, race cars.

ALLARD MOTOR COMPANY LTD., 5305 Maingate Dr., Mississauga, Ontario, Canada. Products: Automobiles, race cars.

AMI-TOYOTA, 155 Bertie St., Port Melbourne, Victoria, Australia. Products: Cars, light trucks, engines, panels.

ARGYLL TURBO CARS LTD., Minnow House, Lochgilphaed, Argyll, Scotland.

ASTON MARTIN LAGONDA LTD., Tickford St. Newport Pagnell, Bucks, MK 9AN, Great Britain. Products: Touring and competition cars.

ASTON MARTIN TICKFORD, 58 Tanners Dr., Blakelands North, Milton Keynes MK14 5BW, Great Britain. Products: Coaches.

ATLANTIS MOTOR COMPANY LTD., Little London, Northwold, Thetford, Norfolk, Great Britain. Products: Vintage replicars.

AUDI NSU AUTO UNION AG, Postfach 220, D-8070 Ingolstadt, Federal Republic of West Germany. Products: Audi cars.

AURORA CARS LTD., 36 Shelley Rd., Richmond Hill, Ontario L4C 5G3, Canada. Products: Automobiles.

AUTOBIANCHI, Lancia, v. V. Lancia 27, 10141 Turin, Italy. Products: Lancia cars.

AUTOKRAFT LTD., Unit 815, Brooklands Industrial Park, Weybridge, Surrey, U. K.

AUTOMOBILE APAL S.A., rue de la Fontaine 25, B-4570 Blegny (Belgium). Products: Automobiles.

AUTOMOBILES CITROEN, 62 Blvd Victor Hugo, Neuilly sur Seine 92208 Cedex, France. Parent company: Peugeot S.A. Products: Citroen cars.

AUTOMOBILES DANGEL S.A., 5 rue du Canal, 68780 Sentheim, France. Products: Automobiles.

AUTOMOBILES PEUGEOT, 75 Av. de la Grande Armee, Paris 75016, France. Parent company: Peugeot S.A. Products: Peugeot cars.

AUTOMOBILES STIMULA S.a.r.l., Chemin de Sacuny, 69530 Brignais, France. Products: Replicars, Bugatti 55.

AUTOMOVILES TALBOT S.A., Apdo 140, Madrid 21, Spain. PSA Peugeot owns controlling interest. Product: Automobiles.

AUTOS y MAQUINAS del ECUADOR S.A., Casilla 370-A, Quito, Ecuador. Product: Cars, race cars.

AVON COACHWORK LTD., Ladbroke House, Millers Rd. Warwoik CV34 5AP, Great Britain. Products: Coaches.

ASLK-AVTOMOBILNY ZAVOD IMENI LENINSKOGO KOMSOLA, Avtoexport, Ul. Volkhonka 14, Moscow 119902, U.S.S.R. Products: Automobiles.

(KAROSSERIE) BAUER GmbH, Poststr. 40-62, 7 Stuttgart 1, Berg, Federal Republic of West Germany. Products: Coaches.

BAYERISCHE MOTOREN WERKE AG, P.O.B. 400240, 8 Munich, Landshut, Dingolfing, Federal Republic of West Germany. Products: BMW cars.

BEAUJARDIN, 235 W. Sherbrooke, Suite 1104, Montreal, P.Q. H2X 1X8, Ontario, Canada. Products: Prototype cars, race accessories.

BEIJING AUTOMOBILE WORKS, Chuihangliu, Chaoyangqu, Beijing, People's Republic of China. Products: Automobiles; light-duty, cross-country vehicles; Models — BJ-212, BJ-212A and BJ-212E; JingGang-Shan, Beijing and DongFangHong lines.

BENTLEY MOTORS LIMITED, Crewe, Ches. CWI, 3 Pl. Great Britain. Parent company: Rolls-Royce Ltd. Products: Automobiles.

BERTONE (Carrozzeria) S.p.A., c.s.o. Peschiera 223, Turin, Italy. Products: Small and medium-series car bodies, prototypes, Bertone automobiles.

BITTER-AUTOMOBILE GmbH & Co. KG, Berliner Str. 57, 5830 Schweim, Federal Republic of Germany. Products: Specialty automobiles.

BL P.l.c., (British-Leyland) 35/38 Portman Square, London WIH OHQ, Great Britain. Products: Automobiles — Austin, Morris, MG, Rover, Triumph, Daimler and Land Rover.

BMW (South Africa) (Pty) Ltd., Andre Greyvenstein Rd, Isando 1600, South Africa. Products: BMW cars.

C.E.D.R.E.-SEVE, 31310, Montesquieu Volvestre, France. Products: Electric cars.

CHANGCHUN AUTOMOBILE PLANT, Dongfent Dajie, Chaoyangqu, Changahun, Ji Lin Province, People's Republic of China. Products: Hong Qi cars.

CLANCY, 210 Kooyong Rd., Toorak, Victoria, Australia. Products: Coaches.

CLASSIC-CAR JANSSEN, Am Raffelberg 4, D-5880 Ludenscheid, Federal Republic of West Germany. Products: Replicars.

CLASSIC-CAR-OLDTIMERBAU, Otto-Lilienthal-Str. 14, D-64000 Fulda, Federal Republic of West Germany. Product: Replicars.

COLEMAN-MILNE P.l.c., Colmil Works, Wigan Rd., Hart Common, Westhoughton, Bolton, BL5 2EE, Great Britain. Products: Limousines.

COMPANHIA INDUSTRIAL SANTA MATILDE Inc. Co., Rua Buenos Aires 100, Rio de Janeiro, 20070, Brazil. Products: Automobiles.

CRAYFORD ENGINEERING GROUP, High Street, Westerham, Kent, Great Britain. Products: Convertibles, estate cars and cross-country vehicles.

CUSTOCA, 8714 Kraubath/Mur 55, Austria. Products: Automobiles.

QT-ENGENHARIA E EQUIPAMENTOS Ltda., Rua das Orquideas 451, Vila Marchi, Sao Bernardo do Camp, Sao Paulo, Brazil. Products: Automobiles.

RENAULT, REGIE NATIONALE DES USINES, 34 quai du Point du Jour, Boulogne Billancourt 92109, France. Products: Renault automobiles.

RELIANT MOTOR P.l.c., Two Gates, Tamworth, Staffs, Great Britain. Product: Automobiles, race cars.

RENAULT ARGENTINA S.A., Sarmiento 1230, Buenos Aires, Argentina. Products: Automobiles.

ROLLS-ROYCE MOTORS LTD., Crewe, Ches CWI 3 PL., Great Britain. Products: Rolls-Royce and Bentley automobiles.

RUSKA AUTOMOBILES B.V., 115-127 Lauriergracht, 101b RK Amsterdam, Holland. Products: Automobiles.

SAAB-SCANIA AB, Saab Car Division S-611 81 Nykoping, Sweden. Products: Cars, trucks, buses.

SBARRO-ATELIERS DE CONSTRUCTIONS AUTOMOBILES, ACA Atelier, 1411 Les Tuileries-de-Grandson, Switzerland. Products: Automobiles, coaches.

SCARLATTI CARS, 21 Koper St., Farramere, Benoni 1500, South Africa. Products: Coaches.

SEAT-SOCIEDAD ESPANOLA DE AUTOMOVILES DE TURISMO S.A., P. Castellana 278, Madrid, 16, Spain. Products: Automobiles.

SEMAL-SOCIEDADE ELECTRO MECANICA DE AUTOMOVEIS Ltda., Rua Nova de S. Mamede, 7-2, DT, 1296 Lisboa, Portugal. Products: Portaro automobiles.

SEVEL ARGENTINA S.A., Juramento 750, (1428) Capital Federal, Buenos Aires, Brazil. Products: Fiat and Peugeot automobiles.

SHANGHAI AUTOMOBILE WORKS, Luo Pu Rd., An Ting Town, Jiading County, Shanghai, People's Republic of China. Products: Automobiles.

SKODA-AUTOMOBILOVE ZAVODY NARODNI PODNIK, Trida Rude armady, mlada Boleslav, Czechoslovakia. Products: Automobiles.

SIPANI AUTOMOBILES LTD., 25/26 Industrial Suburb, Second Stage, Tumkur Rd., P.O.B. 2224, Banglore, 560022, India. Products: Automobiles.

(AUTOMOBILES) STIMULA Sari, Chemin de Sacuny, 69530 Brignais, France. Products: Small-series replicars.

SUZUKI MOTOR CO., LTD., 300, Takatsuka, Kami-mura, Hamana-gun, Shizuoka Pref., Japan. Products: Cars, electric cars, trucks, buses.

TALBOT et Cie., 46 Av. de la Grande Armee, Paris 75016, France. Products: Automobiles.

TALBOT MOTOR COMPANY LTD., International House P.O.B. 712, Bickenhill Land, Birmingham, Great Britain. Controlling interest held by PSA Peugeot.Products: Automobiles.

TATRA NARODNI PODNIK, Tatra Koprivnice okres Novy Jioin, Czechoslovakia. Products: Automobiles, racing cars.

TEILHOL VOITURE ELECTRIQUE, Zone Industrielle La Masse, 63600 Ambert, France. Products: Electric cars.

TIMMIS MOTOR COMPANY LTD., 4351 Blenkinsop Rd., Victoria B.C., V8X2C3, Canada. Products: Replicars.

TMC-THOMPSON MANUFACTURING CO., (Wexford) Ltd., Castlebridge, Wexford, Ireland. Products: Engineering, design, development, manufacturing and consulting.

TOYOTA MOTOR CORP., 1, Toyota-cho, Toyota-shi, Aichi Pref., Japan. Products: Cars, trucks, buses.

TVR ENGINEERING LTD., Bristol Ave., Blackpool, Lancs, Great Britain. Products: Automobiles, race cars.

UAZ-ULIANOVSKY AVTOMOBILNY ZAVOD, Avtoexport, Ul. Volkhonka 14, Moscow 119902, U.S.S.R. Products: Automobiles.

VAUXHALL MOTORS LTD., Kimpton Rd., Luton, OSY, England. Parent company: General Motors Corp. Products: Automobiles.

VAZ-VOLZHSKY AVTOMOBILNY ZAVOD, Avtoexport, Ul. Volkhonka 14, Moscow 119902, U.S.S.R. Products: Lada automobiles.

VEB AUTOMOBILWERK EISENACH, Rennbahn 8, 59 Eisenach, German Democratic Republic. Products: Wartburg automobiles.

VEB SACHSENRING AUTOMOBILWERKE ZWICKAU, W. Rathenau Strasse, 95 Zwickau, German Democratic Republic. Products: Trabant automobiles.

VESSA, Societe d'Electricite Romande, Rue du Lac 18, 1815 Clarens, Switzerland.

VOLKSWAGEN ARGENTINA, S.A., Florencio Varela 1903, San Justo, Provincia Buenos Aires, Argentina. Products: Automobiles.

VOLKSWAGEN DO BRASIL S.A., v. Anchieta km 23.5, Sao Bernardo do Carnpo, Sao Paulo, CEP 09700, Brazil. Products: Automobiles.

VOLKSWAGEN OF NIGERIA LTD., km 17, Badagry Highway, Lagos, Nigeria. Products: Automobiles.

VOLKSWAGENWERK AG, D-3180 Wolfsburg, Federal Republic of West Germany. Products: Automobiles.

VOLVO CAR B.V., Steenovenweg 1, Helmond, The Netherlands. Minority interest held by Volvo Car Corp. Products: Volvo automobiles.

VOLVO CAR CORP., S-405, 08, Goteborg, Sweden. Products: Volvo automobiles.

YAMAHA MOTOR CO., LTD., 2500, Shingai, Iwata-shi, Shizuoka Pref., Japan. Products: Motorcycles.

YLN-YUE LOONG MOTOR CO. LTD., 150 Nanking East Rd., Sec II, Taipei, Taiwan. Products: Automobiles, Nissan sedan and light trucks.

ZAGATO CAR s.r.l., Arese, 20017 Terrazzano di Rho, Milan, Italy. Products: car bodies.

ZAZ-ZAPOROZHSKY AVTOMOBILNY ZAVOD, Avtoexport, Ul. Volkhonka 14, Moscos 119902, U.S.S.R. Products: Automobiles.

ZCZ-ZAVODI CRVENA ZASTAVA, Spanskih boraca 4, 34000 Kragujevac, Yugoslavia. Products: Automobiles.

ZIL, Avtoexport, Ul. Volkhonka 14, Moscow 119902, U.S.S.R. Products: Automobiles.

DEALERS

The number of new-car dealers in the U.S. on Jan. 1 remained virtually unchanged for the third year in a row: There were 24,724 new car dealerships at the start of 1984, compared to 24,721 one year earlier and 24,729 on Jan. 1, 1983.

But there was far more dualing of franchise lines at the start of this year, thanks in large part to the two Chevrolet captive imports. The number of dealerships carrying only domestic car lines increased by 61 to 12,297; the number of import-only dealers fell 58 to 3,822, and the number of dealers handling both imports and domestics rose by 2,389 to 8,605.

Import franchises (as distinct from dealerships or outlets, which can carry more than one franchise each) rose 18 percent to 16,191 on Jan. 1, 1985. Nearly the entire increase was attributable to the two Chevrolet franchises for its new Japanese imports, Suzuki Sprint, sold on the West Coast, and Isuzu Spectrum, sold only in the East.

The healthy 13-percent retail sales increase during the year, combined with the stable dealer population, boosted the average sales per franchise to 420 from 374. Domestic dealers averaged 380 sales per franchise, up from 330 in 1983. Import dealers averaged 222 sales per outlet, down from 235.

But there were some imports way above average: Honda, Toyota, Mitsubishi and Nissan once again took the top four spots in sales per outlet (although in 1983 the order was Toyota, Honda, Nissan and Mitsubishi). Taking the next four spots for both years were, in order, Oldsmobile, Buick, Chevrolet and Ford Division. But the gap between No. One and No. Eight was a big one: Honda dealers averaged 610 sales in '84, compared to 276 for Ford dealers.

IMPORTED-CAR RETAIL OUTLETS

	Jan. 1, 1985		Jan. 1 1984	
Imported-cars only:				
Exclusives	2,833		2,750	
Duals	989		1,130	
		3,822		3,880
Import-domestic duals:				
Domestics with captive imports	6,065		3,864	
Domestics with other imports	2,540		2,352	
		8,605		6,216
Total imported-car dealers		12,427		10,096

Notes: Renault and Volkswagen are counted as domestics. Captive imports are Chevrolet Sprint and Spectrum; Dodge Colt, Conquest and Vista; Plymouth Colt, Conquest and Vista.

Despite a surge in imports, domestic tire makers increased both sales and profitability last year. Their combined profits rose 16 percent from the 1983 fiscal year on a sales increase of 7 percent. Meanwhile, imported passenger units rose 31 percent and exports rose 36 percent but on a far smaller number: Imports outnumbered exports, six to one.

SUPPLIERS

The continuing drive of the U.S. auto industry to build more corrosion protection into its products resulted in an 11.4-percent increase in per-vehicle use of zinc coatings during the '84 model year. In its annual survey of the nation's four largest auto companies, the Zinc Institute estimates the typical U.S.-built '84 car contained 6.15 pounds of zinc used as a coating material.

ZINC COATINGS CONTENT— TYPICAL U.S. CAR BY MODEL YEAR

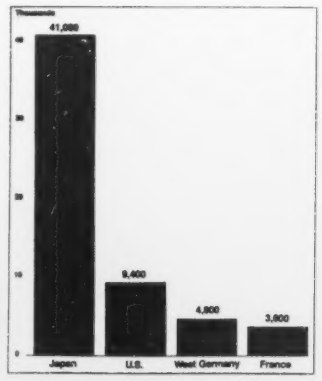
WORLD ROBOT POPULATION AT END OF 1983



Source: Robotics Industries Assn.

The Robotics Industry Assn. estimates some 13,000 industrial robots are installed in the U.S., about 35 percent of them in the auto industry. According to the RIA, U.S.-based suppliers shipped more robots in 1983 and 1984 than in the previous 20 years combined. Based on new orders, the average price of a robot dropped from $74,100 in 1983 to $59,200 during 1984.

ROBOT STATISTICAL HIGHLIGHTS

for the year ended December 31, 1983 and the three month periods ended March 31, 1984 and June 30, 1984

	Units	Millions
Year ended December 31, 1983:		
Unfilled orders @ 1/1/83	585	$ 43.7
New Orders	4,057	300.8
Shipments	3,060	194.4
Unfilled orders @ 12/31/83	1,582	$150.1
Quarter ended March 31, 1984:		
Unfilled orders @ 1/1/84:	1,264	$122.8
New orders	914	54.2
Shipments	1,232	81.5
Unfilled orders @ 3/31/84/	1,264	$122.3
Quarter ended June 30, 1984:		
Unfilled orders @ 4/1/84	1,264	$122.8
New orders	1,455	86.0
Shipments	1,065	66.5
Unfilled orders @ 6/30/84	1,654	$142.4

*—Adjusted to reflect transfer of 1,310,918 passenger vans to truck total.
(1)--Each year many trucks are issued passenger car license plates due to their intended usage or local state laws. Beginning in 1966 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.
(2)--Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 approximately 181,000 passenger cars registered to fleets at out-of-state addresses have been included.
Adjustments for the absence of Oklahoma and other states have been made where applicable.

*-Adjusted to reflect transfer of 1,310,918 passenger vans from passenger car total to truck total.
(1)—Each year many trucks are issued passenger car license plates due to their intented usage or local states laws. Beginning in 1966 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the esitmated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.
Note: Adjustments for the absence of Oklahoma and other states have been made where applicable.

Ford, Fiat whisper; all Europe strains to hear

By Richard Feast
European Editor

LONDON.—The one fact everyone is agreed on is that top executives of Ford of Europe and Fiat Auto have their heads together discussing each other's problems and how they are going to solve them.

Robert A. Lutz, chairman of Ford of Europe, and Vittorio Ghidella, managing director of Fiat Auto, have admitted it. What no one outside the dynamic duo's immediate entourage knows are the specifics.

Even sources who would normally be indiscreet have their mouths shut on this one. The stance has inevitably led to intense speculation right across Europe.

One thing seems certain: The two companies are not talking about nuts and bolts. The belief is that what is being discussed is so serious, so high level that it could alter the face of the European industry.

Given the significant problems faced by both companies—both specific to them and general to the industry as a whole—radical developments are expected. A Ford executive suggests some sort of declaration of intent within three months, which would tie in with Lutz's timetable for implementing large-scale personnel reductions at Ford of Europe.

• Company spokesmen say nothing is being ruled out of the discussions. That alone could point toward mutual shareholdings, joint companies, collaboration on whole cars and certain high-cost components, shared manufacturing and joint marketing.

It seems fair to assume that they involve passenger cars, however. This is where the key problems exist, even if Ford and Fiat do share interests in trucks and telecommunications.

On the passenger-car front, all volume makers are faced with a serious overcapacity problem, identified by Lutz at about 2.6 million units. Aligning output to demand, while trying to maintain profits, will mean scaling back on employment.

In European countries, any such moves have substantial political and social repercussions.

At the same time, the Europeans are watching the latest moves by the Japanese auto makers, who have about 10 percent of European sales. Because of various trade restrictions, that share seems unlikely to alter significantly.

The Japanese companies, therefore, are moving into assembly and manufacture in Europe, making alliances with weaker companies (Honda and Austin Rover,

Japan's role due to grow at expense of Big Three

By Michelle Krebs
Financial Editor

Japanese auto makers will supply a third of the world's passenger cars and a third of North America's demand by the turn of the decade, according to the latest Automotive News World Outlook.

The Japanese companies will sell 3 million cars in North America by 1991, causing the Big Three auto makers to suffer erosion of position on their home turf, the quarterly service of Data Resources, Inc. (DRI) and Automotive News shows.

The Japanese companies presently supply just under a quarter of the world's passenger-car demand and about a fifth of North America's.

Squeezed by flat domestic demand and hikes in Japanese sales over the next years, the Big Three will see sales drop by one million units per year, said John Hammond, DRI's U.S.-based economist.

"To maintain enough profits for the capital investments needed to be world-class manufacturers, they will have to continue to lower costs as well as emphasize other markets worldwide," he said.

The course for North American car production will be bumpy throughout the decade. Production will dip below 8.3 million units in 1987 and close out the decade at 8.8 million units, virtually no higher than production forecasted for this year, the World Outlook shows.

• At the same time, Japanese domestic production will enjoy steady, yearly increases, rising by 15 percent—or one million units—by 1990 to 8.2 million units.

In addition, the Japanese companies will spread production throughout the world. By 1990, one million units will be built in the U.S.

They also will add at least 300,000 units of production capacity in Europe, bringing the total to 1.2 million units annually, based on already announced plans.

Throughout the rest of the world, including Australia, South Africa, Mexico and Taiwan, the Japanese manufacturers will produce 1.1 million cars a year.

On the sales side, U.S. passen-

'86½ Fiero GT

Jim Dunne

To debut sans turbo

A restyled GT version of the 1986½ Fiero runs the test track. Earlier versions of the car were tested with a long-awaited turbocharged V-6 engine, but insiders say an overheating problem will mean the high-output power plant will have to wait until the 1987 model year. Fiero's hang-on skin panels make it easy to restyle the car. This is the third new body style in three years.

Austin Rover plans for U. S. unveiled

By John A. Russell, Dan McCosh and Anne Hope
Copyright, 1985, Automotive News

Austin Rover, Ltd., has named Norman Braman, well known Florida auto dealer and owner of the Philadelphia Eagles football team, U.S. distributor for the car it will begin selling in the U.S. in 1987. The operation will be headed by the former director of product planning for Volkswagen of America.

Automotive News learned Raymond Ketchledge has left VWoA to become president of Austin Rover of North America, based in the Miami area.

The new firm will import Austin Rover's version of the car it is building jointly with Honda.

The car, codenamed XX by Austin Rover, probably will be called Vitesse, not Rover, in the U.S., according to European sources. It is a name already used for the sporty, top-of-the-line Rover in Europe.

Austin Rover is planning to make a major announcement in New York next week, detailing its U.S. plans.

Calls to Braman and the manufacturer were not returned.

However, Automotive News did confirm Braman was named distributor and that a Miami-area company has been established under the title of Austin Rover of North America.

Braman hit the headlines last year in the controversy over the Porsche distribution plan that would have eliminated the franchised dealer. He was vice chairman of the Porsche Dealer Action Committee and took an active role in stopping Porsche from implementing the plan.

Two years ago, Braman's Honda dealership was in the news after a lawsuit was filed alleging the dea-

Hahn to be keynoter at World Congress

Carl H. Hahn, chairman of Volkswagenwerk AG, will deliver the keynote address, The State of the Industry—A European View, at the 10th annual Automotive News World Congress in Detroit.

The 10th anniversary of the World Congress will mark the first time the keynote address is delivered by an overseas auto executive.

Carl H. Hahn

Automotive News Week will be observed in Detroit Aug. 25-29, with the World Congress in session Aug. 25-28 at the Westin Hotel in the Renaissance Center and the fourth annual Automotive News World Expo taking place Aug. 27-29 at nearby Cobo Hall.

In presenting a European view of the state of the auto industry as World Congress keynoter, it is expected that Hahn will draw on his wide international management experience and knowledge of the European economy.

Hahn has been chairman of Volkswagenwerk since 1981 Previously, he served as vice president and general manager and then executive vice president of Volkswagen of America before returning to Germany to assume responsibility for VW sales and service throughout the world.

Hahn received his doctorate from the University of Bern where he specialized in problems relating to the economic unification of Europe.

During the four-day World Congress, participants will have the opportunity to share ideas with 34 top-level industry leaders and observers who will deliver presentations. General sessions and seminars will cover the concerns of manufacturers, suppliers and dealers.

Global trends and government regulations will be addressed at the World Congress, as well as a wide range of automotive subjects including research, design, engineering, sales and service.

World Congress attendees in past years have included executives involved in managing, planning, designing, engineering, manufacturing and retailing in the automotive and related fields.

These, as well as purchasing executives, will be drawn to World

Car sales plunge, new products not ready, Renault commitment in question

AMC struggles to survive as troubles mount

By Richard Johnson
Detroit Reporter

A day of reckoning may be at hand for American Motors, with nothing less than the company's survival at stake.

AMC's fate is apparently hanging in the balance as its French partner Renault—under new management—reevaluates its commitment to auto production in North America.

News Analysis

At last week's annual shareholders' meeting, AMC officials went out of their way to dispel talk that Renault is about to pull the plug on its North American ally. Indeed, AMC President and Chief Executive Officer Jose Dedeurwaerder produced a letter from Renault's new chairman, Georges Besse, pledging continued support for AMC.

Yet, doubts about Renault's long-term involvement persist, what with losses of $1.35 billion last year for the French auto maker and political considerations in France that could make a North American pullout altogether expedient.

Renault is scrutinizing its worldwide operations and most observers agree that changes of some kind are in the offing for North America. AMC, the company's most visible North American presence, earned $15.5 million last year after dropping $146.7 million in 1983 (despite earning $111 million in asset sales), and losing $154 million in 1982.

After five consecutive profitable quarters, AMC has reported a $29 million loss for the first three months of 1985. Two weeks ago, the company announced across-the-board department budget cuts of 25 percent.

Meanwhile, the man who last fall was handed the task of developing and coordinating Renault's North American strategy, AMC Chairman Paul Tippett, stepped down last week as a full-time employe of AMC.

Conditions at AMC and Renault have given rise to lots of speculation. There is talk that AMC might sell its profitable Jeep operation, abandon the subcompact passenger-car segment or even get out of the passenger-car business altogether.

There are occasional rumors of a partnership with Volkswagen of America or, perhaps, absorption by one of the Big Three U.S. auto makers.

It's been hinted that AMC will close its Kenosha (Wis.) manufacturing operations no matter what contract concessions are granted this year by the UAW in Wisconsin, and there are some doubts about whether the company's new Canadian passenger-car plant will ever be built. Word has even circulated that Dedeurwaerder may be on his way out.

AMC is caught in a squeeze that threatens to drain the lifeblood from the company. While AMC undergoes an agonizing wait for new products, sales of its main passenger-car entries, the Alliance and Encore subcompacts, have fallen drastically in recent months.

At the same time, AMC is beset with serious labor problems at its Toledo Jeep plant while it seeks to bring labor costs at Kenosha in line with those at other U.S. auto manufacturing plants.

More than six years and almost $550 million into its AMC partnership, there are reports from across the Atlantic that Renault is losing patience.

But if the AMC-Renault union has not exactly lived up to its promise, some observers blame Renault for not doing its part in the product realm.

Officials of both companies ballyhoo the fact that Renault has become the biggest-selling European brand name in the U.S.

But while sales of the U.S.-built Alliance and Encore boost the nameplate here, Renault continues as a relatively minor importer. U.S. sales of Renault's 18i and Fuego models totaled just over 12,000 in 1984.

"The bulk of the European auto

Joe Wilssens

Deluged by a flood of questions

Reporters surrounded AMC President Jose J. Dedeurwaerder, left, and AMC Chairman Paul Tippett after last week's annual shareholders' meeting. Dedeurwaerder reiterated the commitment of AMC's French partner, Renault, to AMC and the North American market. Tippett announced he was stepping down as a full-time employe of AMC.

Will remain as chairman, but not as full-time employe

Tippett gives up his job at AMC

By Michelle Krebs
Financial Editor

SOUTHFIELD, Mich.—American Motors Chairman Paul Tippett stepped down as a full-time employe of the auto company, telling shareholders at last week's annual meeting he saw no need for a full-time chairman and a full-time chief executive officer.

"I approached the board with the idea, and the board felt it was the right idea and the right time to do it," Tippett said. He will remain as chairman and a director, though he will not be involved with the day-to-day operations of the company.

"I think we've got to set an example at the top of the company at a time when we're trying to get lean and mean," he said, referring to AMC's intentions to cut 25 percent of its costs. "In my opinion, we didn't need a full-time chairman and a full-time chief executive."

Chairman since September, 1982, Tippett had been chief executive officer until last September when the title went to AMC President Jose J. Dedeurwaerder.

Tippett said his salary, which amounted to $360,000 in 1984, will be cut to whatever the board recommends.

As for AMC's $29-million loss in the first quarter of 1985 and subsequent cost-cutting moves, Tippett told shareholders it is "nothing to get hysterical about."

AMC's $29-million loss, or 29 cents per share, compared with a profit of $5.1 million, or 3 cents per share, in the first quarter last year. Sales in the first quarter of 1985 dropped to $919 million from last year's $1.1 billion. Total worldwide sales were also down, slipping to 89,010 cars and Jeeps from 113,487 last year.

A market shift away from small cars to larger cars, of which AMC has none to offer, was blamed for the loss. Jeep sales were up.

"If anything, our loss in the first quarter only underscores the importance of broadening our market coverage and reducing our vulnerability to drastic swings in the high-volume subcompact car market," Dedeurwaerder said.

"Our plan for reducing that vulnernability is on schedule but won't be complete until 1987, when we launch a new line of intermediate-size passenger cars," he said.

Shareholders approved a proposal that finalizes the financing for the $675 million plant in Brampton, Ont., where the intermediate-size cars will be produced.

Pete Fob, representing UAW Local 72 at AMC-Renault's Alliance/Encore plant in Kenosha, Wis., objected to the proposal, saying Local 72's membership could launch the car at a third of

Company earns $507 million for quarter

Chrysler now a taxpayer; net dips

By Michelle Krebs
Financial Editor

Chrysler Corp. reported its best-ever quarter for sales and pre-tax earnings.

Net income for the first three months of 1985 amounted to $507.6 million, or $4.18 per share, compared with $705.8 million, or $5.64 per share, in the first quarter of 1984. Pre-tax earnings totaled $725.1 million, up from $706.2 million a year ago.

Sales were up 10 percent from last year's first quarter at $5.4 billion from $4.9 billion, setting a new record for sales in any quarter. The previous record was the fourth quarter of 1984 at $5.3 billion in sales.

Even though Chrysler resumed paying taxes, which amounted to $217.5 million in the first quarter, it was the company's second best first quarter for net income.

Chrysler entered 1985 with no more tax loss carryforwards from its years of no profits. The company rejoined the ranks of corporate taxpayers in the fourth quarter of 1984.

Factory sales for the first quarter were 547,047 cars and trucks, up 6 percent from 516,672 for the same period in 1984.

North American market share for the combined retail car and truck market rose to 13.2 percent from 11.4 percent in 1984's first quarter.

Chrysler Chairman Lee Iacocca said profits would have been $30 million to $40 million higher if the company had not been offering incentives, including 8.8-percent financing, on some models. However, he said incentives were necessary for softer segments of the market.

Iacocca added that some incentives may be continued though no decision has been made yet.

"After a great year last year, we're actually off to an even better start in 1985," Iacocca said at a press conference to announce the financial results.

Ford earnings drop 13 pct. on peak sales

By Michelle Krebs
Financial Editor

Ford Motor Co. reported a 13-percent drop in profits for the first quarter of 1985 on record first-quarter sales.

Net income was $783 million, or $4.20 per share, compared with $897 million, or $4.90 per share last year, which was Ford's best first quarter. Ford's best quarter for earnings was the second quarter of 1984 with $909 million.

The company attributed the earnings drop to higher taxes paid.

Pre-tax earnings hit a new record of $1.3 billion, up $18 million from a year ago, and despite the lower net earnings, the first quarter of 1985 proved to be the next-best first quarter in Ford's history.

Sales were up 2 percent at $13.2 billion, surpassing the former first-quarter record of $13.0 billion set last year. Ford's best-ever quarter was $14.1 billion in the second quarter last year.

Factory sales for the first quar-

Please turn to Page 49, Col. 1

GM sales set record but profit dips 34 pct.

By Michelle Krebs
Financial Editor

General Motors reported a 34-percent decline in earnings for the first quarter of 1985 though sales in the quarter were the corporation's highest in history.

Net income for the quarter was $1.07 billion, or $3.26 per share, down from $1.61 billion, or $5.11 per share, a year ago. The first quarter of 1984 was GM's best-ever quarter and, despite the earnings decline, the first quarter of 1985 was GM's next-best first quarter.

Sales hit an alltime record $24.18 billion, up 6 percent from $22.89 billion in 1984's first quarter. Worldwide factory sales increased 3 percent to 2,382,000 units.

GM's profit margin declined to 4.4 percent from 7.1 percent a year ago, and income from nonconsolidated affiliates, primarily General Motors Acceptance Corp., was down about one percent from 1984 at $221 million.

Earnings for Electronic Data Systems Corp., acquired by GM last fall, amounted to $38 million, or $1.26 per share.

GM Chairman Roger B. Smith and President F. James McDonald said the financial results were adversely effected by "advanced engineering cost pressures associated with new products and plants—pressures that began last year and extended into the first quarter."

"The costs related to the 'front loading' of design and engineering for future model programs and costs related to the accelerated training of employes for new technologies and new plants are investments in the future which should yield substantial returns," they said.

They reaffirmed the company's intentions to proceed with the ongoing reorganization and major investments needed to integrate modern technology into its design and manufacturing process.

Smith and McDonald said U.S. industry is still on track for a year of more than 15 million car and truck sales.

Inquiry on warranty, leakage is too broad, company says

AMC seeks to quash FTC probe

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—American Motors has asked the FTC to end its broad investigation into whether the company failed to honor its auto warranties or, in the alternative, to limit the scope to alleged engine oil and automatic tranmission fluid leaks in 1983 and 1984 Alliance and Encore models.

AMC's motion to quash the FTC's civil investigative demands (CIDs) claims the questions are vague and too broad and the time for answers is far too short.

The CIDs were served on AMC President Jose J. Dedeurwaerder on March 11 with an April 1 return date.

FTC's purpose is to discover whether AMC has violated Section 5 of the FTC Act or the Magnuson-Moss Warranty Act by any practice relating to warranty issuance or performance.

AMC's lawyers said the FTC started its non-public investigation in response to consumer complaints about oil and transmission fluid leaks in 1983 and 1984 Alliances. AMC said that in answer to a letter from FTC in March, 1984, the company produced more than 4,000 pages of information in June, 1984, and filed even more data in August and October of that year.

Now, said AMC's lawyers, the FTC has illegally broadened its investigation to cover whether AMC "ever" violated Section 5 of the FTC Act "in any fashion."

In any case, they added, 20 days is not enough time to go through "nearly every piece of paper or data base" related in any way to any AMC warranty. They said that to answer just one question for warranty or service contracts for the Alliance or Encore since July 1, 1982, means reviewing hundreds of thousands of pages of reports.

Not only may this be burdensome and costly, but it may mean unfavorable publicity for the smallest company in an "intensely competitive" industry.

AMC feels the results "will harm the domestic auto industry, competition in the auto industry as a whole and, ultimately, the American consumer"—especially since AMC has shown that engine oil leakage in those 1983 Renault cars is not a problem and any problem that may have existed for transmission fluid leaks has been solved.

"Engine oil leaks and automatic transmission fluid leaks on the 1985 Alliance and Encore vehicles are virtually nonexistent," AMC said.

In explaining why the FTC probe will be "extremely disruptive" to AMC and harm the industry and consumers, the AMC memo mentioned the recent plight of the U.S. industry with special focus on AMC.

It said that bad publicity may mislead the public into thinking the Alliance and the Encore are not reliable cars and may even jeopardize the reception of future AMC products.

In addition, AMC said, the public could be hurt by "further erosion" in the domestic industry and even by using public money to pursue a probe that is "unnecessary in the first instance."

AMC maintained that if FTC refuses to quash its CIDs, its questions should be limited to alleged leaking fluid in 1983 and 1984 Alliances and Encores, but FTC should not go on a "fishing expedition" into all AMC/Jeep/Renault vehicles dating back to 1980 models.

Besides, the lawyers added, some of the data requested by FTC consists of "privileged documents" which AMC wants to protect.

AMC even objected to definitions of AMC, Renault, AMC employe, the word "identify" and such phrases as "Alliance/Encore oil leakage" and "Alliance/Encore transmission leakage."

AMC further objected to FTC's "instructions" and "specifications." And to cap it all, AMC wants to be reimbursed if it has to comply with all the FTC civil investigative demands.

Hall and Oates on tour

Pontiac General Manager Mike Losh opens the door of a Pontiac Fiero for John Oates. To the right of the car is Daryl Hall, the other member of the pop duo Hall and Oates. The singers toured the General Motors plant in Pontiac when they were in Detroit to give a concert.

Total is 284,490, highest since 1978

Mid-April car sales jump 22 pct.

By Edward Lapham
Marketing Editor

Boom!

That was the sound of the six major domestic auto makers exploding into the spring selling season with a 22.5 percent mid-April sales increase.

Aided by a host of small-car interest-rate incentives and unseasonably warm weather throughout much of the country, the industry reported total sales of 284,490.

That compared with 232,156 units sold in the same period last year. There were nine selling days in the period this year and last.

The total was the third highest for the April 11-20 period, behind 296,621 in 1978 and 289,519 in 1977.

It brought the year-to-date total to 2,547,792, up 4.5 percent from 2,437,160 sold through the same date last year.

"The industry is absolutely on fire," said auto analyst Art Davis of Prescott, Ball & Turben. "I think the public is excited about Detroit's offerings for the first time."

Davis, who put the annualized selling rate for the period at 11.6 million units including imports, said he believes there is still a backlog of demand that will carry into next year.

"It's not just the small cars with the financing incentives," he said. "The whole line is selling. It looks like the industry will build out the model year at maximum capacity."

The sales surge was indeed widespread, with only the Cadillac, Renault and AMC marketing units reporting year-to-year downturns.

Ford Division's 62.1 percent increase to 50,574 units was the biggest gain and paced Ford Motor Co. to a 49.6 percent increase, best among the six major U.S. producers.

Chrysler Corp. posted a 30 percent increase during the period with sales of 36,732 U.S.-built car sales of 36,732.

Sales of U.S.-built Hondas increased 14.3 percent to 3,530 units from 3,089 units in mid-April last year.

GM's domestic-built sales total for the period was 164,034, up 14.1 percent from last year. The GM corporate total was bolstered by a 43.9 percent increase in Pontiac sales. Chevrolet sales in the April 11-20 period were up 12.6 percent.

Volkswagen sales in the period rose 11.4 percent to 2,133 units, despite low stock levels in GTI models.

Corporate market shares, within the domestic segment, shifted accordingly. Ford's share rose nearly five points to 26.24 percent from 21.49 percent. Chrysler's share rose to 12.91 percent from 12.17 percent in the corresponding 1984 period.

Meanwhile, GM's market-dominating share fell to 57.66 percent from 61.92 percent; AMC's penetration declined to 1.20 percent from 2.27 percent; VW's share dropped to 0.75 percent from 0.82 percent, and Honda's slipped to 1.24 percent from 1.33 percent

The top selling nameplates in mid-April were Chevrolet Cavalier with 20,158 retail deliveries, Ford Tempo with 13,234 sales, Oldsmobile Ciera with 11,977, Chevrolet Celebrity with 10,569 and Ford Escort with 10,530 sales.

Some Chrysler incentives to continue; new ones eyed

By Michelle Krebs
Financial Editor

Chrysler Corp. Chairman Lee Iacocca said last week that the company will continue some sales incentive programs beyond their April 30 expiration dates and may add incentives on other models.

"We're going to continue some of these programs—not all of them—for a while because the market is softening in some spots," he said.

"We have no plans to continue the 8.8-percent financing, but we may," he added.

Free automatic transmissions in the L-body Dodge Omni and Plymouth Horizon models will definitely continue, Iacocca said.

However, he said, other incentives on the small cars have worked so well and dropped inventory levels to such an extent that incentives on smaller cars probably will be allowed to expire.

For example, Chrysler has reduced inventories on the L-body models from a 130-day supply when the incentives started to 25 days. Sales of the Omni/Horizon models were up 44 percent in the first quarter.

"We might be having incentives on some of the bigger cars," Iacocca said.

He said the five-year, 50,000-mile warranty program also will continue.

During the first quarter, Chrysler launched 8.8-percent annual-percentage-rate retail financing on its slower-selling, smaller models.

Covered are the Dodge Omni, Charger and Daytona, Plymouth Horizon and Turismo and Chrysler Laser lines.

The 8.8-percent financing and other sales programs for Plymouth Reliant and Dodge Aries and trucks are due to expire April 30.

Chrysler also launched a Thank You America campaign in the first quarter. Under the program, purchasers of 1979 through 1984 Chrysler Corp. vehicles received a $500 certificate toward the purchase or lease of any new 1985 Chrysler vehicle built in North America and delivered by June 6.

Iacocca said the campaign has been a success.

1985½ Escorts, Lynxes recalled

DEARBORN.—Ford Motor Co. is recalling 2,000 Escorts and Lynxes built in mid-1985 to eliminate throttle-lever interference that could cause the throttle to stick in a nearly wide-open position.

Cars with 1.9-liter engines and air conditioning are affected. Ford said it knows of no related accidents or injuries. It said it discovered the problem during testing at assembly plants.

The cars are not scheduled to be introduced until May 2, but dealers were allowed to sell them before formal introduction. In addition to the 2,000 being recalled for inspection, Ford said another 8,000 in dealer stocks also will be inspected.

breaking news

Continued from Page 1

government sources here, the increase will go to Isuzu and Suzuki, which supply General Motors, and Mitsubishi, which has been asked by Chrysler Corp. to supply it with 200,000 more cars than it now gets annually.

Coalition formed to seek CAFE reduction

WASHINGTON.—AutoChoice, a coalition of General Motors, Ford Motor Co., NADA and the Recreation Vehicle Industry Assn., is expected to be announced this week to promote a reduction in CAFE from 27.5 MPG to 26 MPG, for which both GM and Ford have petitioned NHTSA. A Washington firm, E. Bruce Harrison, has been hired, apparently only for public relations, not for lobbying.

Americar chief indicted on rollback charges

ALEXANDRIA, Va.—Richard J. Gillis, past president of American Car Rental Assn., an industry association, was indicted in federal court here last week on charges of tampering with the odometers of 178 cars sold by Americar Car Rental Assn., a Washington D.C.-based firm. He is president of the company. The Virginia attorney general also filed a $290,000 suit against Americar on behalf of consumers. The suit is said to be one of the largest ever for odometer tampering.

Conferees to meet on business vehicles

WASHINGTON.—House and Senate conferees are expected this week to try to reconcile legislation that would repeal record-keeping rules for business vehicles. (Earlier story on Page 32.)

Eaton, China sign deal on transmissions

KALAMAZOO, Mich.—The Transmission Division of Eaton Corp. entered into a license agreement with the People's Republic of China to provide engineering documentation, technical assistance and training necessary for the manufacture of Fuller Roadranger transmissions in China.

Under contract terms, Fuller will provide technical aid in China, and Chinese engineers will be trained in the U.S. to make three 9-speed Roadrangers.

According to Derek Dawson, Transmission Division general manager, two of the 9-speed models selected are also the most popular models with fleets in the U.S. The third is a hybrid model intended for specific Chinese use.

Typical applications for the transmissions are over-the-road hauling of general freight and specialized commodities, as well as combined on/off highway uses such as construction and logging.

In addition to the licensing agreement, Fuller will also supply Roadranger transmission kits for assembly in China until that nation's manufacturing capability reaches self-sufficiency.

China's transmission program will develop manufacturing proficiency, one component at a time, over a period of years.

"China's State Planning Commission has made inter-province highway construction and motor truck transportation a top priority in the national modernization program," Dawson said.

"Their National Automotive Industry officials have indicated that accelerated plans call for import of up to 10,000 heavy-duty trucks in the next five years," he added.

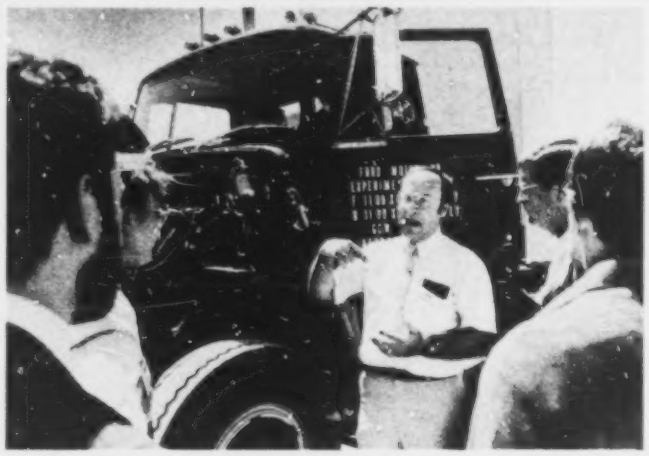
Those will be knocked down for assembly in China with Fuller Roadrangers. The company believes this is a clear signal that China is opening its domestic market in order to become a world-class industrial nation.

Current Roadrangers were selected over earlier models because of China's insistence on having the most advanced technology.

Fuller was selected after an international study by China National Automotive Industry Import and Export Corp. and Heavy Duty Truck Corp., China's largest producer of heavy trucks.

Fuel sipper

With the new Detroit Diesel 270-HP Silver 6-71 providing the power, this 1984 GMC Brigadier won Best Stock Truck Overall in the 1984 Ontario Trucksave Fuel Economy Challenge. It got 9.24 MPG in the 60,000-to-80,000-pound GCW stock-truck category.



Ford moves with new diesel

Ray Morawski, supervisor, engine development, Ford Tractor Operations, describes the advantages of the firm's new line of Brazilian built mid-range turbocharged diesel engines. Ford will introduce the engine in its new Cargo truck this fall and in its full medium-duty line in the 1987 model year.

New Ford engine line debuts on '87 models

By Arthur Fla...
Assistant Truck Editor

PALM SPRINGS, Calif.—Ford Motor Co. turbodiesel engines built in Brazil will power the company's 1987-model medium-duty trucks, Edward T. Mabley, Ford product development manager, announced at the engine introduction here.

Ford, however, will continue to offer Detroit Diesel Allison and Caterpillar engines in its trucks and as for moving to an all-Ford engine line, Mabley said the company will "see what happens."

There are no current plans to sell the engines for use in trucks outside the Ford line.

The engines will be available in the U.S. in 6.6- and 7.8-liter inline six-cylinder turbocharged variations.

The first engine in the new line scheduled to reach the U.S. is a 6.6-liter version rated at 165 HP at 2,600 RPM. It is due to appear this fall in the Cargo, a Class 6-7 truck also built in Brazil with U.S. and European designed components.

The new engines will be built at a renovated Ford plant in Sao Paulo. Ford spent some $100 million for the renovation, according to Mabley.

The engines are based on a line of Ford Tractor Operations agricultural diesels. The line also includes a four-cylinder truck engine, in production since 1982; naturally aspirated six-cylinder truck engines for use outside the U.S, and three-, four- and six-cylinder agricultural diesel engines.

Changes made in the development of the truck engines will be incorporated into the agricultural engines, according to Richard C. Ronzi, chief engineer of the Product Engineering Office for Ford Tractor Operations.

"The new Ford turbodiesel family is a key element in the company's plan for long-term success in medium and heavy trucks," Mabley said.

He noted that Ford has been one of the industry's largest purchaser of diesel engines and the company's competitors have integrated diesel engines.

Diesel engines account for some 30 percent of the cost of a mid-range truck and some 60 percent of mid-range trucks are diesel-powered, according to Mabley.

He added, "Selection of Ford Tractor Operations as the source for these mid-range truck diesel engines followed a worldwide search that included many suppliers and alternate business approaches."

The truck manufacturing business, he said, has become a worldwide industry and, in order to be competitive, "cost is key."

To that end, Ford has aligned itself with parts sources from low-cost locations.

Ford, Mabley added, is leading its suppliers to worldwide product configurations. He said the Cargo and its engine will have all North American parts numbers. For example, the Rockwell axles, which are built in Brazil for the Cargo, are interchangeable with axles manufactured in the U.S.

Engine production started in February, but those engines are naturally aspirated 6.6-liter units

Grumman moves to new HQ site in Michigan

BETHPAGE, N.Y.—Grumman Corp. is reorganizing its Vehicle Division and moving the headquarters of Grumman Olson, manufacturer of aluminum truck bodies, from Melville, N.Y., to Sturgis, Mich.

"This consolidation of management at operational sites will give us better lines of communication, make us more cost-competitive and result in increased operating efficiency," said Ronald B. Peterson, division president.

In Sturgis, Grumman Olson builds the Kurbmaster walk-in delivery bodies, Kurbette cutaway-van bodies, Kubemaster 26-foot gooseneck trailer, bodies for the gooseneck-towing Krew Kab and bodies for the United Parcel Service Package Car.

The Vehicle Division includes Gumman Olson and Grumman Emergency Products, Roanoke, Va., manufacturer of fire trucks and other emergency vehicles.

Samuel T. Rozzi, president, Grumman Emergency Products, replaces Norman Reinertsen as Grumman Olson president. The latter is the division's senior vice president.

Leonard Rothenberg, vice president, Grumman Energy Systems, succeeds Rozzi as president in Roanoke.

truck industry news

2-month registrations continue strong trend

Truck registrations were up in all segments, except Class 2, for the first two months of 1985, with Ford increasing its lead over Chevrolet.

In the heavy segment, Ford continued to narrow the gap on leader International Harvester.

Table on Page 30.

Through February, companies registered 679,958 trucks, up 16.3 percent from 584,758 in like 1984, according to R.L. Polk & Co.

New York and Oklahoma figures were compiled from manufacturers sales records. No registrations were available for Minnesota.

Ford's 185,588 registations led Chevrolet's 171,915 by 8.0 percent. During the same 1984 period, Ford led Chevrolet by a slimmer 3.9 percent: 170,816 vs. 164,476.

Both manufacturers, though, lost market share. Ford's market share of 27.30 percent was off 1.91 percentage points from last year, and Chevrolet's share of 25.29 percent was off 2.84 percentage points.

No. 3 Dodge registered 78,550 vehicles, up 36.6 percent.

Its market share of 11.55 percent was up 1.72 percentage points from a year ago.

The biggest share increase, however, was in the miscellaneous category, heavily dominated by imports.

That category registered 132,363 vehicles, up 33.3 percent. Miscellaneous trucks grabbed a 19.47 percent market share, up 2.49 percentage points from a year ago.

Registrations in the light-duty segment totaled 639,393, up 15.5 percent from 553,512.

Virtually all of the gain came in Group 1. A total of 438,587 trucks were registered in this group, up from 312,380 in like 1984.

Group 2 light-duty vehicle registrations dropped to 195,406 from 235,805 last year.

Group 3 showed a slight increase to 5,400 from 5,327 last year.

The medium-duty segment showed a hefty 34.0 percent increase, jumping to 9,189 from 6,855 a year ago.

Within the medium-duty segment, Group 4 vehicles showed a modest increase to 109 from 101 a year earlier.

Group 5 vehicle registrations nearly tripled, with 914 against 345 a year earlier.

And Group 6 had a nice gain of 27.4 percent: 8,166 against 6,409 a year earlier.

Heavy-duty registrations were up 28.6 percent, with 31,376 against 24,391 a year earlier.

Here, Group 7 grew to 11,165 from 8,389 a year earlier; while Group 8 jumped to 20,211 from 16,002.

In the heavy-duty segment, International Harvester held a narrower 6.5 percent lead over Ford compared with last year's 18.8 percent edge.

IH lost 0.56 percentage points with a market share of 21.84 percent. It was 22.40 percent last year.

Ford gained 1.64 percentage points in the heavy-duty field with a market share of 20.50 percent compared with 18.86 percent last year.

Mack's market share increased nicely to 12.32 percent, up 2.78 percentage points from a year earlier.

Automotive News looks back at the HISPANO-SUIZA

The Spanish car of kings was known equally for performance and styling, with coachwork produced by independent designers. This 1912 Hispano-Suiza Alfonso, built for the king of Spain, featured the famous winged emblem, but overlooked front brakes.

Automotive News hasn't overlooked any major facet of the last century of automotive development, in our special plus issue The Centennial Celebration of the Car. This issue will be published Wednesday, October 30, 1985. The ad closing date is September 4, 1985.

In it, we present a sweeping, worldwide panorama of stories and photographs, centered on the automobile. And offer you an unparalleled opportunity to reach influential industry decision makers. This promises to be the best read issue of Automotive News ever.

Don't overlook the special advertising opportunity represented by this collectors' issue. An ad in The Centennial Celebration of the Car is a business decision you're sure to celebrate. Contact our local representative, or call (313) 446-6000 for more information.

1984 total rises 25 pct. to $1.7 billion

Auto industry boosts TV spending

By Edward Lapham
Marketing Editor

The auto industry increased its television ad spending last year to take advantage of special-event programming and heightened viewer interest, recently released statistics show.

Automobile advertising on television, the medium's second largest ad category, jumped 25 percent in 1984 to $1.7 billion, according to the Television Bureau of Advertising (TVB).

"The Olympics and the election were the two major ongoing events which brought more money to the medium in 1984," said Fred Danzig, editor of the industry trade publication Advertising Age.

"Advertisers took advantage of the large viewing audiences to deliver their messages to a greater number of people."

The single largest category, advertising by the auto companies themselves, increased 13 percent to nearly $964 million.

However, because the advertising rates increased, the jump in expenditures does not reflect a corresponding jump in the amount of advertising.

"The rates went up 10 to 12 percent last year, so any increase over that reflects an increase in advertising," Danzig said. "Anything less means a decrease."

Although real increases in TV advertising by the auto companies were slight after factoring out the rate hikes, spending by dealers and dealer associations seemed to reflect bargain spot-buying tied to special events.

Expenditures for TV advertising by the 15 biggest-spending dealers rose 49 percent to $257 million.

Meanwhile, TV ad spending by leading-make dealer associations rose 63 percent to more than $249 million.

Within the company spending category, there were some hefty increases, despite the overall category stasis.

TVB showed BMW with the largest overall increase, 83 percent, for total 1984 TV spending of more than $9.5 million.

Saab registered the second largest increase with a 75 percent jump in outlays to $1.2 million.

Volvo's spending rose 63 percent to $7.3 million.

General Motors, of course, spent the most in 1984. Its total of $240 million was up 22 percent.

Ford Motor Co.'s total ad spending actually declined one percent in 1984 to $200.7 million, while Chrysler Corp.'s 1984 TV ad expenditures of $121 million were up 18 percent.

American Motors' total rose 10 percent to $62.7 million.

Among the imports, Nissan remained the largest corporate advertiser, with total spending up 20 percent to $91.7 million.

Toyota's 1984 TV ad spending was up 18 percent to $76.9 million.

At the other end of the spectrum, Peugeot whacked its TV ad spending 17 percent to $3.9 million. Jaguar cut its expenditures 16 percent to $1.4 million.

Among the top 15 dealer advertisers, Cal Worthington's Los Angeles operation remained the biggest spender, despite a 4 prcent total decrease, with outlays of more than $2.8 million.

Cal Worthington's Sacramento operation spent $1.8 million and the new Seattle operation spent an additional $1.3 million, earning the well-known TV ad personality three of the top 15 spots.

The single largest increase in TV ad spending among the top 15 dealerships was registered by Long-Lewis Ford, Birmingham, Ala., with a whopping 326 percent increase to $958,300.

Vaughn Burrell, Long-Lewis vice president and general manager, said the increase reflected a shift in buying. "We used to spend a little in TV, a little in radio and a little in newspaper but, long-term, we found out we can get twice or three times the coverage on TV for half the money," Burrell said.

Long-Lewis, founded in 1911, is the oldest dealership in Alabama, he said, but the intrusion of a new freeway leg isolated the store from traffic patterns.

"We tried running a map in newspaper ads, but that didn't help people find the store," Burrell said. "Now, we just give the address in the TV ads and hope people can find us with maybe only one stop to ask for directions.

"We're getting 100 to 125 buyers a month from more than 75 miles away. That alone makes it worth it."

The dealership retails about 300 new cars and trucks and 169 used cars a month.

BMW dealer associations posted the biggest total spending increase in that category, with a 381 percent jump to nearly $6.9 million.

AMC dealer associations also showed a large increase, 337 percent, to a spending total of more

Getting on with the show

Greater St. Louis Automotive Assn. representatives officially open the auto show at Cervantes Convention Center. The show attracted 250,000 persons and there were 418 confirmed floor sales. From left are: Elmer Jung, Jung Chevrolet, domestic lines chairman; Jim Meagher, Meagher Chevrolet-Oldsmobile, president of the group; Don Gilbert, executive vice president, and Ted Weiner, operations director, Cahners Exposition Group, Boston.

Ford turbodiesel engines set to debut on '87 models

Continued from Page 16

intended for Brazilian Cargos only.

Production of the U.S.-bound 6.6-liter units will begin in mid-May. Production of the 7.8-liter engines is scheduled to start in April, 1986.

Power outputs for the 7.8-liter engines will be 185, 210 and 235 HP. The 210 and 235-HP units will feature turbocharger aftercooling.

Mabley said Ford could, in the future, bump power output to 250 HP.

When Ford brings in the engines to power its full line of mid-range trucks, 160- and 170-HP 6.6-liter units will be added to the range.

The 6.6- and 7.8-liter engines will be offered in Ford's L, F and B series trucks with gross vehicle weights ranging from 17,000 to 66,000 pounds and tractors with gross combination weights up to 80,000 pounds.

Ford is not placing application restrictions on the engines, and Mabley said they will carry a warranty that is competitive with the industry's best.

Although Ford has not announced plans to import its four-cylinder diesel truck engine to the U.S., Ronzi indicated that engine might also find its way into a North American Cargo truck. The four-cylinder diesel with turbocharger is currently used to power Ford's F-4000, a Brazilian commercial truck which resembles older models of the U.S. F-350 pickup truck.

"The Cargo can go bigger or smaller," Ronzi hinted. "There is a possibility of downsizing the Cargo."

Ford will produce 7,000 to 8,000 truck engines to power an equal number of Cargos in its first year with the engine and truck line, according to Mabley.

Ronzi noted that the cylinder heads and blocks for the first-year engines will be produced in England and shipped to Brazil. However, the Brazilian plant will produce complete engines when it gets up to full steam.

The new, U.S.-bound truck engines are designed so they will be able to meet the new EPA emission standards for commercial-size diesel engines when they become effective in 1988.

The engines, according to a Ford engineer, could be adjusted to meet the standards now, but with a fuel-economy penalty.

In the intervening years before the EPA rules take effect, Ford will make changes to improve economy in an emission-controlled engine, the engineer said.

GM extends insurance plan for belt users

DETROIT.—General Motors' insurance arm, Motors Insurance Corp., is offering a new, separate $10,000 seat-belt-user insurance program in 39 states to encourage motorists to "buckle up," MIC President J.J. MacDonald announced.

A year ago, GM began providing seat-belt-user insurance for a one-year period at no cost to purchasers of new GM cars and light trucks. Similar coverage was available through GM of Canada.

Since the program is expiring for many GM vehicle owners, GM's insurance subsidiary allows customers to purchase extension coverage for nominal fees.

In addition, it is being extended to owners of other than GM vehicles as long as the vehicle is equipped with manufacturer-installed safety belts.

The premiums are $6.25, $9.75 and $13.25 for one, two and three years, respectively.

The policy provides $10,000 to the estate of the insured person or any relative who lives with the insured person if an automobile accident causes the death of one of the individuals while wearing a seat belt or child-restraint.

NADA names Brooks director in Arizona

SCOTTSDALE, Ariz.—C.M. (Bud) Brooks, Brooks Cadillac here, has been chosen as the Arizona director for NADA.

Brooks served as president of the Arizona Automobile Dealers Assn. in 1980-81 and was president of the Scottsdale Automobile Dealers Assn. from 1972 to 1976.

NADA, leasing groups ask IRS for help

Business-car problems persist

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Although contemporaneous record-keeping requirements for business vehicles are to be repealed by Congress—pending a House-Senate conference to reconcile legislation—auto dealers and auto leasing companies, as well as those who buy and lease automobiles for business purposes, still have problems with proposed tax regulations for business vehicles.

In recent IRS hearings on tax treatment of non-cash fringe benefits, NADA and attorneys for the National Vehicle Leasing Assn. and the American Automotive Leasing Assn. spoke in favor of amending the proposed IRS rules.

Each group asked the IRS to further simplify withholding requirements for personal use of business vehicles.

NVLA also asked that certain changes be made regarding the eligibility of leased vehicles for the Investment Tax Credit and that a recapture mechanism be included in the rules applicable to vehicles that do not fully benefit from the ITC during the life of the lease.

AALA asked for a greater range of safe-harbor exemptions that would cover fleet vehicles on the road for most of the business day with a fairly constant percentage of business use.

The lease group also asked that all trucks and vans used exclusively for business be exempted from the "luxury automobile" limitations and that IRS exempt persons without an office or other regular place of business from commuting restrictions.

AALA further urged an increase in the special commuting valuation of $3 per day.

In the matter of rules governing valuation of automobiles by Annual Lease Values, AALA sought elimination of the requirement that fair market values be determined "without regard to any group or volume discount." It called that "unclear and impracticable."

All three groups expressed concern that the new regulations would hurt car sales, particularly sales of domestically produced vehicles.

Sales would suffer, they said, because many fleet buyers are opting to provide vehicle allowances to their employes rather than providing them with cars.

Although employes who are given vehicle allowances are likely to purchase a vehicle, NADA said the average period of use for an employer-provided car is only 30 months, while the average period for a car owned by an individual is 48 months.

"Clearly, the regulations will have an adverse impact on sales even if company cars are replaced by personal cars," the dealer group said.

The IRS was also told that the overwhelming majority of leased vehicles in the U.S. are of domestic origin and that a shift to vehicle allowances will mean a greater share of import sales in the U.S.

According to James Culotta, president of Detroit-based McCullough Leasing, Inc., the proposed IRS rules governing tax treatment of leased vehicles would mean that "a significant portion of the five million corporate leased vehicles—of which less than 4 percent are now foreign—could be replaced by Japanese imports which now account for 18 percent of the U.S. market."

Views similar to those expressed by Culotta were presented before the IRS by both leasing associations.

NVLA said, "The end result of the proposed rules is likely to be that a program designed to generate tax revenues ultimately ends up creating exactly the opposite result because of the dampening effect on domestic vehicle sales combined with additional administrative costs."

A membership survey by the NVLA showed that an average fleet that placed 934 vehicles in service last year had lost 32 vehicles per fleet thus far in 1985 and that an average of 109 vehicles per fleet for all of 1985 were expected to be lost due to record keeping and compensation regulations.

Although the survey was conducted prior to congressional action on the record-keeping issue, all three groups indicated that the atmosphere surrounding the tax law changes had fostered uncertainty and confusion among fleet customers and had contributed to decisions to sell corporate cars, cancel leasing plans, or not to purchase new fleet vehicles.

It has also been suggested that the rules have given corporations a convenient rationale to rid themselves of an increasingly expensive prerequisite.

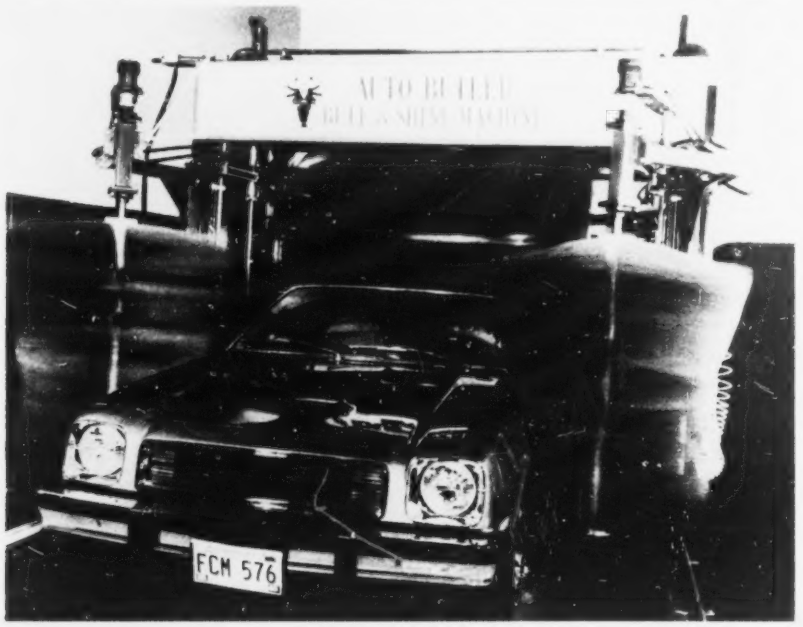
Because the rate of increase in vehicle operating costs has been greater than the rate of inflation, some corporations are expected to use the new tax law to cut costs by moving to vehicle allowances, which are easier to control.

NADA also asked the tax agency to lift what NADA believes to be "unreasonable and unnecessary burdens on dealers who provide company cars to employes, other than salespersons who are provided demonstrators."

According to Robert Wade, NADA chief counsel, the proposed rules mean a dealer must evaluate employe use each time the employe is assigned a new car and that the value of each new car must also be computed. He said this would be a substantial task even if the standard for determining fair market value were clear.

Wade told IRS that while NADA understands that the personal use of an employer-provided car constitutes income to the employe, NADA "strongly urges IRS and the Department of the Treasury to provide a means for measuring that income that takes into account the unique pattern of employe automobile use in the automobile business."

Wade said the IRS should allow dealers to treat an employe as if he or she used one car for 12 months and value that car by reference "to some average figure that would apply for all of the dealer's employes," such as the average sticker price of all cars sold by the dealer in the previous year.



MR. DEALER, WILL YOU SPEND 15 MINUTES OF YOUR VALUABLE TIME TO LEARN HOW TO ADD $40,000, $50,000, EVEN $100,000 TO YOUR BOTTOM LINE WITH **NO CAPITAL INVESTMENT.**

HERE'S HOW: BROADWAY EQUIPMENT COMPANY HAS PRODUCED A 15 MINUTE FILM THAT TELLS THE AUTO BUTLER SERVICE BUILDER STORY. SIMPLY FILL IN THE COUPON BELOW AND SEND IT TO: AUTO BUTLER, INC., 1110 WEST BROADWAY, MINNEAPOLIS, MN 55411.

AUTO BUTLER WILL SEND YOU THE FILM TO VIEW AT YOUR LEISURE IN THE PRIVACY OF YOUR OWN HOME OR OFFICE. (ALL YOU NEED IS A BETA OR VHS VIDEO PLAYER). WHEN THE FILM IS RETURNED, YOU'LL BE SENT A MINIATURE MR. AUTO BUTLER DOLL AS SHOWN IN THE PHOTO. A GREAT ATTENTION GETTER AND CONVERSATION PIECE FOR ANY OFFICE OR SHOWROOM FLOOR OR A GREAT GIFT FOR A SPECIAL DAUGHTER, SON OR GRANDCHILD. (COULD BE THE NEXT CABBAGE PATCH KID). A RETAIL VALUE OF OVER $50.00. BUT THE REAL KICKER COMES FROM DISCOVERING HOW YOUR DEALERSHIP CAN BENEFIT FROM THE AUTO BUTLER SERVICE BUILDER SYSTEM.

YOU HAVE NOTHING TO LOSE AND A WHOLE LOT TO GAIN BY SENDING THE COUPON BELOW. (THE FILM STARS SUPER CAR SALESMAN JACKIE COOPER).

___ Yes, I'm interested in viewing the Auto Butler film, to learn first hand how I can add big profits to my bottom line. I agree to return said film after I have used it.

PLEASE SEND BETA ___ VHS ___

And, Yes, send me the Auto Butler Doll as shown in the photo.

QUALIFIED NEW CAR DEALERS ONLY

Maryland dealer agrees to refund extra charges

ROCKVILLE, Md.—A local auto dealership has agreed to make refunds that could total $20,000 to customers as a result of a settlement agreement with the Montgomery County Office of Consumer Affairs (OCA).

OCA alleged that Montgomery County Cars had routinely added a charge for "mechanical and appearance labor" to the selling price of the automobiles it sold, when this charge actually represented additional dealer profit.

OCA alleged that it was a misrepresentation, in violation of the County's Consumer Protection Act, to describe additional dealer profit as mechanical and appearance labor.

While denying any violation of the Consumer Protection Act, Montgomery County Cars agreed to provide a fund of $20,000 for refunds to consumers who have had such charges included in the selling price of automobiles purchased. A consumer should first file a complaint with OCA to request a refund, according to George Rose, Chief of OCA's automotive unit.

"We will review all complaints filed to determine who is eligible for a refund under the agreement," said Rose. "To qualify for reimbursement from the fund, a complaint must be filed within 180 days."

Montgomery County Cars has also agreed to disclose clearly any charges for additional dealer profit on both the purchase order and on a dealer's window sticker located next to the manufacturer's window sticker.

Auto industry hikes spending for TV ads

Continued from Page 24

than $6.3 million. That was augmented by Renault dealer association spending which increased 16 percent to $5.4 million.

Lincoln-Mercury dealer associations spent more than $7 million in 1984, a 268 percent boost.

The Nissan/Datsun dealer associations once again had the deepest pockets in 1984 with total TV ad outlays of ‡33.5 million, a 41 percent increase over 1983 spending.

Ford Dealer associations boosted their TV spending by 109 percent to bump Chevrolet dealer associations out of the second spot with a total of $28 million.

In 1984, Chevrolet dealer associations spent $23.8 million, an increase of 58 percent over 1983 TV ad spending.

All of the dealer associations monitored by TVB showed net increases. In fact, all of the increases were double-digit jumps except for the 8 percent increase posted by Oldsmobile dealer associations.

Carpenter's marks 92 years; Chevrolet deal since 1915

DURHAM, N.C.—Carpenter's Chevrolet, one of the oldest GM dealerships, will observe its 92nd anniversary in May by offering special anniversary prices on automobiles, trucks and used cars.

The company, which has been operated by five generations of Carpenters, was formed in 1893 by J.E. Carpenter and J.W. Carpenter and their father, Duane Carpenter. It sold groceries, wagons and buggies.

In 1910, the firm began to sell Metz automobiles and Kohler trucks from catalog pictures. Both of those lines were chain-driven similar to a present-day bicycle, and the Kohler truck was cranked from the side.

Between 1912 to 1915, the firm became the first Ford dealership and the first Dodge dealership in Durham. In 1915 it added Chevrolet.

During the years, the firm also handled Reo, Pullman, Oakland, Oldsmobile, Liberty and Elgin cars, company officials said.

In 1923, third-generation family member Marcus G. Carpenter moved the company to another downtown location.

Since 1955, the firm has been operated by Marcus G. Carpenter Jr., as president, and Fred G. Guthrie Jr., as vice president.

Recently, Marcus G. Carpenter III and Roy R. Wade, of the family's fifth generation, have joined the firm. Carpenter is sales manager and Wade is assistant general manager.

Company officials said, "The great-great grandsons of Duane Carpenter are now selling to some of the same families that started trading with the Carpenters when they sold wagons and buggies in 1893. Today, Carpenter's has six acres of modern downtown sales and service facilities."

Ketchum to handle Honda Acura ads

GARDENA, Calif.—American Honda has selected Ketchum Advertising to handle its Acura Automobile Division account effective May 1. Ketchum will open a Los Angeles office to service the $15 million Acura account.

Honda plans to launch the new line of "sporty, upscale performance" cars in April, 1986. The new line will have a separate dealer network, with distinct marketing and sales apparatus.

The 1986 Acura sales target is 45,000 units. Honda plans to appoint 150 Acura dealers by the end of next year with a total of 600 by 1990.

Sport Chevrolet participates in expo for disabled

SILVER SPRING, Md.—Sport Chevrolet will participate in the three-day 1985 Exhibition of the President's Committee on Employment of the Handicapped, May 1-3 at the Washington Hilton Hotel.

This is the second consecutive year that Sport Chevrolet has joined the exhibition, which is cosponsored by the Paralyzed Veterans of America and brings together 3,500 attendees and providers of all types of products and services for the disabled.

Those attending Sport's exhibit will be eligible to win a 40-channel CB receiver in a raffle.

As part of its services to the handicapped, the dealership offers a Directions Directory which includes information on suppliers and installers of adaptive equipment for the disabled.

Robb Henry, Sport Chevrolet salesman, heads a special sales group to provide expert service to disabled persons in the market for cars, vans and trucks that can be adapted to their special needs.

50th anniversary in Wisconsin

Leon A. Voegeli, center, Voegeli Chevrolet-Buick, Inc., Monticello, Wis., receives a 50-year-dealer award from Scott Bergstrom, left, organizational manager of Buick's Milwaukee zone, and Larry Shields, zone service manager.

movers and shakers

General Motors

Thomas H. Wyman, chairman of CBS, Inc., is a new member of the company-proposed slate of directors that will be voted on by shareholders at the General Motors annual meeting May 24.

Wyman joined CBS as chairman and chief executive in 1980 after serving with Pillsbury Co., Green Giant Co., Polaroid Corp. and Nestle Co.

John T. Connor and **John D. deButts** will retire from the GM board after the annual meeting. Both are 70. Connor was president and chief executive of Merck & Co. when he joined the GM board in 1964. He resigned in 1965 when he was appointed U.S. Secretary of Commerce, but returned in 1967 and has served continuously since then. He has been chairman of Schroders, Inc., since 1980.

DeButts has been a GM director since 1976. He was chairman and chief executive of American Telephone & Telegraph when he joined the GM board.

Oldsmobile

David E. Knecht has been appointed general service manager for Oldsmobile. He succeeds **Kenneth E. McCourt,** who has moved to the General Motors Customer Sales and Service Staff.

Richard C. Kuhn has replaced Knecht as assistant general service manager for the Western U.S. Kuhn formerly was Midwest regional service manager.

Knecht has been with Oldsmobile since 1965. He has held field service posts in Dallas and Houston and has been service manager of the Central region and assistant general service manager—East.

Kuhn has been with Oldsmobile since 1961. He has held service positions in the Houston, Charlotte (N.C.) and Detroit zones.

David E. Knecht

Richard C. Kuhn

Jimmie C. Anderson

Palmer E. Bunker

Jimmie C. Anderson has been appointed Kansas City zone manager for Oldsmobile. He succeeds **Charles E. Hebard Jr.,** who has retired.

Palmer E. Bunker replaces Anderson as Indianapolis zone manager. Bunker has been advertising manager for the division.

Anderson joined Oldsmobile in 1946 and has served in Lansing and in field assignments in Kansas City, Dallas and Memphis. He became Indianapolis zone manager in 1981.

Bunker was named advertising manager in 1982 after field posts in Atlanta, Detroit, Dallas and Houston. He has been with Oldsmobile since 1972.

Volkswagen of America

William A. Gelgota Jr. has been appointed manager of Volkswagen advertising for Volkswagen of America. He replaces **Michael V. Howe,** who resigned late in 1984 to join Chrysler-Plymouth as national advertising manager.

William A. Gelgota Jr.

Gelgota formerly was with J. Walter Thompson in Detroit as vice president, management supervisor for Ford Division car advertising. He has been in the advertising business since 1973.

Ford Motor Co.

Robert P. Sparvero has been named president of Ford Argentina, and **Richard E. Van House** has succeeded him as director of the business and product strategy office for Ford Asia-Pacific and Latin American Operations. Van House had been chief engineer, advance vehicle engineering and technology, with Ford's Car Engineering and Planning organization.

Sparvero joined Ford in 1964 and has served with the Finance Staff, Ford Division and the Product Development Group. He moved to Ford's International Automotive Operations and became director of the Business and Product Strategy Office in April, 1983.

Van House, with Ford since 1968, has served as programs manager for the 1983 Thunderbird and Cougar XR-7 and for luxury-car and Thunderbird. He was named executive director of luxury and mid-size car planning in 1982 and chief engineer, advanced vehicle engineering and technology, in 1983.

Automotive News World Outlook sees market loss for Big Three

Japan's role due to keep growing

Continued from Page 1

ger-car sales will rise by only about 7 percent from now until 1990, the analysis shows. Yet the Japanese makers' major focus will continue to be on North America where they will sell 3 million cars a year by 1991.

Honda will move ahead of the pack as the No. 1 seller of Japanese cars in the North American market. Honda's North American sales are expected to increase 56 percent to 711,000 units by 1991. About half will be built at Honda's Marysville (O.) plant.

Toyota Motor Co. sales in North America are expected to increase 10 percent to 673,000 units by 1991. Not included is the GM-Toyota production of the Nova, counted in GM figures.

Nissan will see North American sales up 20 percent to 660,000 units annually,including about 200,000 cars to be built each year at its Smyrna (Tenn.) plant.

Mazda will make substantial gains in North America. By 1991, Mazda will increase North American sales by 75 percent to 341,000 units, the study found. Mazda will build 240,000 cars at its plant in Flat Rock, Mich.

The other smaller Japanese makers, who have suffered the most from the U.S. trade restraints, are expected to make inroads in the North American market.

Subaru of America, the U.S. marketing and distributing arm of Fuji Heavy Industries, will gain 5 percent in North American sales. The company says it has no immediate plans to produce cars in the U.S.

Mitsubishi will enjoy a 20-percent rise in North American sales. Mitsubishi is planning a joint venture with Chrysler Corp. The plant, to be located in a yet undetermined location in the Midwest, will have capacity of 180,000 units per year, split evenly between the two companies.

Suzuki, which produces the Sprint for Chevrolet, will hit the 80,000-unit sales mark in North America by 1991. Suzuki sold 11,000 units in 1984, its first year in the North American market. In addition, Suzuki is considering building a plant in Canada.

Isuzu, which produces the Spectrum for Chevrolet, will see a North American sales gain of 500 to 600 percent to 141,000 units by 1991.

Across the Atlantic, the Japanese manufacturers are due to follow a similar trend in Western Europe, where trade barriers in some countries are far more stringent.

Nissan and Honda have been the leaders in Europe as they have been in North America, and announcements for European production by Toyota and Mazda are expected, said John Lawson, DRI's London-based economist.

Lawson said the Japanese companies apparently have chosen a strategy of working around trade barriers in the heavily restricted markets but potentially larger-volume markets of the U.K., Italy, Spain and France rather than trying for a greater share in the free markets or the relatively free but highly competitive West German market.

European production by Japanese companies will be up a minimum of 300,000 units by 1990 at 1.2 million cars a year, the World Outlook shows. However, it could go significantly higher, Lawson said.

Based on already announced plans, Nissan will build 100,000 cars in the U.K. and an undetermined number in Spain. In addition, Nissan has capacity of 50,000 units through its joint venture with Alfa Romeo in Italy.

Honda, meanwhile, has capactiy of 80,000 units at the Austin Rover plant in the U.K. In addition, Honda is jointly planning an executive car with BL.

"It has proven to be a fruitful relationship," Lawson said, "and another vehicle is being considered."

The financial weakness of the European makers could speed up joint ventures with Japanese companies. Europe's volume producers have lost money for the past five years. Last year's losses were even larger than the previous year's. This year is expected to be another losing one, though the losses will be narrowed, Lawson said.

At the same time, contemplation of emission control legislation like that in the U.S. has triggered the need for massive capital investment in new technology. The Japanese companies have the emission control technology from their experience in the U.S. market, giving them a competitive edge and better positioning them for joint ventures.

"The volume European manufacturers are so financially weak there is no way they can recover those investment costs," Lawson said.

Diesel engines are becoming increasingly popular in Europe and the Japanese have good diesel technology, Lawson added.

At home, the Japanese auto makers will enjoy some sales increases though not dramatic, growing at a rate of 2 percent annually.

Importers to Japan will fare no better than they have in the past, the World Outlook said. Only Western European makers will see minimal rises with Volkswagen continuing to be the market leader.

For the rest of the world, the Japanese companies, which have been the leaders particularly in Third World production, will see sales in those countries increase by about 200,000 units to a total of 1.1 million units by 1991.

Court refuses dealers' bid to halt credit-union sales

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—A Superior Court judge has refused to grant an injunction sought by the Motor Car Dealers Assn. of Southern California to stop several credit union sales of new cars.

Saying that the Department of Motor Vehicles has closed the loophole that allowed the sales in the first place, Judge John Cole ruled against the dealers and paved the way for several more sales under conditions provided by the DMV.

The dispute has grown out of a provision in the DMV code that allows the issuance of temporary branch permits for the sale of new cars. Dealers have used the permits in the past to sell cars at special events such as auto shows.

Recently, a number of companies have obtained the permits to conduct one-day or two-day sales on behalf of credit unions and their members. The companies buy cars near invoice from franchised new-car dealers, truck them to the sale site and price them at or below the Manufacturer's Suggested Retail Price. The credit union arranges the car loans for its members at the sale.

One such company, Autoland, is a licensed used-car dealership. It was that company's April 27 sale at the Hollywood Bowl that the car dealers were trying to stop when the suit was filed against the DMV for granting Autoland a temporary branch permit.

Last month, the DMV ruled that it would no longer issue the temporary branch permits to parties other than new-car dealers. However, the DMV also ruled that it would issue permits to those companies which obtained them in the past and had already invested money in upcoming sales.

Autoland's March 30 sale in San Diego was held under that provision and an earlier attempt by the dealer group to stop that show with an injunction also failed.

Judge Cole's decision against the dealers will also allow Brown & Clarkson of Northern California to go ahead with its sale in early May in Oakland. However, after those last several sales, it's not clear if those companies can show sufficient investment to continue the practice.

Judge Cole said the case was "easy to decide" and added that he saw it as "equal wrong on both sides." He added that the "problem should be resolved on the legislative or administrative level," and he said he felt the DMV has taken adequate steps to correct the code and enforce it as it was originally promulgated.

Right in line with top week of 1984

Makers schedule 188,167 cars

By Louise Kertesz
Detroit Reporter

Scheduling production at the high levels of the final weeks of 1984, U.S. auto makers last week continued to aim for the best weekly output so far this year.

The targeted build of 188,167 cars last week topped the 185,788 for the week ended March 30 and was 1,831 under the best weekly output for 1984: 189,998 for the week ended Dec. 15.

Last week's estimated output was 2.45 percent better than the previous week's 183,669 and 9.19 percent more than the year-ago week's 172,329.

The prior week's actual production fell some 2,000 cars short of target.

Year-to-date, 2,876,528 cars have been assembled, 1.91 percent ahead of the 2,822,648 completed last year at this point.

Companies shared last week's targeted build as follows: General Motors, 57.59 percent; Ford Motor Co., 20.57 percent; Chrysler Corp., 16.53 percent; American Motors, 1.94 percent; American Honda, 1.76 percent; Volkswagen of America, 1.06 percent; Nissan Motor Mfg. Co., U.S.A., 0.31 percent, and New United Motor Mfg. Co., 0.24 percent.

Honda lost two hours of production during the week ended April 20 due to a power shortage.

Four hours of daily overtime was scheduled last week at Honda's plant in Marysville, O.

General Motors scheduled two overtime shifts Saturday (April 27) at the following plants: Pontiac G; Detroit; Arlington, Tex.; Framingham, Mass.; Lakewood, Ga., and Wilmington, Del.

Chrysler scheduled two overtime shifts Saturday at its plant in Belvidere, Ill.

Chrysler plants in Belvidere, Newark (Del.) and St. Louis are scheduled to work two nine-hour daily shifts this week (April 29).

Chrysler's Jefferson (Detroit) plant will work two 8½-hour daily shifts this week.

Ford's Lorain (O.) plant worked overtime Saturday.

Ford has slated daily overtime this week at its plants in Atlanta; Chicago; Lorain, O.; Dearborn; Wixom, Mich.; Edison, N.J.; Wayne, Mich., and Kansas City.

Overtime is planned at Ford's Dearborn plant Saturday, May 4.

Tippett gives up his job as full-time AMC chairman

Continued from Page 3

the cost of the Canadian plant and launch it sooner.

Despite AMC's dismal performance in the first quarter and Renault's troubles at home, Dedeurwaerder reiterated Renault's continued commitment to AMC and the North American market.

He read a letter from Renault's new chief executive officer, Georges Besse, which said: " . . . the intentions of Renault expressed in this letter remain unchanged and I intend—despite Renault's difficulties—that we continue our long-term program with you."

Renault, which holds a 46-percent stake in AMC, also reported a loss last week. For 1984, Renault lost $1.35 billion compared with a loss of $170 million in the previous year, despite a 6-percent increase of sales at $12.67 billion.

It has been speculated that Renault would back away from its AMC partnership to tend to problems at home.

Dedeurwaerder also denied rumors that AMC planned to sell its profitable Jeep division. "We will not sell Jeep," he said emphatically.

Dedeurwaerder defended the company's reactions to worker sabotage at the Jeep plant in Toledo. He said that a few workers cannot "play with the future of all the workers . . . 99 percent of the workers are responsible workers, and we are not going to give up from the pressure of a couple."

In response to the sabotage, AMC filed a lawsuit against the UAW and its Toledo leadership seeking restitution for the $300,000 worth of damage. The workers are protesting the company's means of repaying them for their investment during the recession.

Dedeurwaerder also stood tough on the situation at the Alliance/Encore assembly plant in Kenosha. The company has threatened to close the plant if it doesn't win concessions from workers there.

"If we are competitive with the rest of the industry, we have no reason to close the Wisconsin plant," he said. "If we are not, then we do have a problem. And the union knows what competitive is. They know what they have to do."

Dedeurwaerder said a competitive contract means not only being competitive with General Motors and Ford Motor Co. but competitive with Mazda and Toyota and their auto-making operations in the U.S.

Truck production declines a bit from year's high

Domestic makers scheduled production of 69,067 trucks last week, down 2.63 percent from the previous week's 70,932.

The prior week's build topped the 70,825 for the week ended April 13, the former 1985 high, and was the highest weekly production since June, 1979.

Last week's targeted output was 5.58 percent more than the year-ago week's 65,416.

So far this year, 1,121,905 trucks have been assembled, 7.31 percent more than the 1,045,502 built last year at this point.

General Motors scheduled two overtime shifts Saturday (April 27) at its plants in Flint (Nos. 1 and 2); St. Louis; Janesville, Wis., and Pontiac (No. 2).

GM's Baltimore plant worked one overtime shift Saturday.

Ford Motor Co. scheduled daily overtime this week (April 29) at the following plants: Wayne, Mich.; Kansas City; Lorain, O; Norfolk; Twin Cities, and Louisville.

Overtime Saturday (May 4) is scheduled at Ford plants in Kansas City and Norfolk.

Chrysler Corp.'s Warren (Mich.) plant is scheduled to operate two nine-hour daily shifts this week.

Canada sights another peak for 1985 output

For the third consecutive week, Canadian auto makers scheduled their highest weekly production of the year.

Estimated output of 24,328 cars last week was 4.91 percent better than the previous week's 23,190 and 3.65 percent more than the year-ago week's 23,471.

The 23,190 was the highest total of 1985, topping the week ended Jan. 12, when 23,068 cars were assembled.

So far this year, 330,077 cars have been assembled, 12.18 percent less than the 376,270 completed last year at this point.

Truck makers scheduled 20,073 units last week, about the same as (down 0.46 percent) the previous week's 20,166, which topped 20,000 for the first time ever.

Last week's estimate was 11.96 percent more than the year-ago week's 17,928.

Year-to-date, 300,577 trucks have been built, 6.90 percent more than the 281,183 assembled last year at this time.

Chrysler Corp.'s Windsor (Ont.) plant scheduled 2,670 Plymouth Voyagers, 2,826 Dodge Caravans and 612 Mini Ram Vans last week, bringing the T-115 total for the year to 96,124.

4 Japanese makes lead sales-per-dealer ranking

By Jenny L. King
Detroit Reporter

The new-car sales-per-dealer story, freckled with averages and percentages, may be difficult to integrate, but the essence of it is: A profitable livelihood for most franchise holders. Especially those with import lines. And even more so for those with trucks as well as cars.

First-half figures included domestic car sales up about 2 percent, import sales up 7 percent, record overall truck sales, the domestic dealer population stable but down a bit and import dealers up nearly 25 percent due to the addition of Chevrolet import and Merkur outlets.

Combining car and truck sales brought some hefty numbers for many makes. Mitsubishi led the pack with an average of 432 sales per outlet in the first half, followed by Toyota at 403 and Nissan at 350. In fourth place was Honda, 334, which has no trucks to boost its figures.

Chevrolet led the domestics with 290 car-truck sales per dealer, and Ford was close behind with 288.

Dealers with domestic car franchises averaged 207 sales per outlet January through June, 1985, up slightly from 204. Import dealers had a 94-per-outlet car average for the first half, down from 117 a year earlier. The new-car dealer average figured to 228 this year compared with the year-ago 221.

With domestic-car sales beginning to stall out at the end of the first half, there were no U.S. makes with record averages per franchise. Imports were another story. Accompanying record sales for many lines were best-ever averages. Honda, Volvo, Mercedes-Benz, BMW and Saab dealers notched sales-per-outlet records. So did Alfa Romeo, Jaguar, Isuzu and Mitsubishi dealers.

It was a mixed bag for the major U.S. auto makers during the first half. General Motors' domestic-car sales-per-dealer average slipped to 245 from 251 a year earlier. Ford Motor Co. was up to 195 from 183. Chrysler dealers turned in an impressive 151 domestic average, up from 131 in 1984.

American Motors, including AMC Eagles plus domestic and imported Renault passenger cars, slid to 46 per outlet from a healthier year-ago 68. Volkswagen, likewise including imported models with domestic new cars, was up to an outlet average of 121 from 115.

In addition to the long-time Automotive News New-Car Sales per Outlet By Make chart, a combined car/light-truck sales per dealer profile shows the larger sales (and profits) picture. It is planned to add the table to this semi-annual accounting.

The car .ruck listing includes pickups imported by Mitsubishi, Toyota, Nissan, Mazda, Isuzu and

Wild Wildcat

Concept car for Buick

Wildcat, Buick's latest experimental car, may not be as far-out as it appears. GM insiders say it's a test bed of several forward projects at GM that will be showing up on production cars in the near future. Story, another picture are on Page 2.

New 3-year labor pact carries $1 billion price tag

Chrysler plants due to reopen

By Mary Connelly
Detroit Reporter

UAW members at Chrysler Corp. plants in the U.S. were expected to return to work today (Oct. 28). The ratification vote on a new three-year contract carrying a $1 billion price tag was held during the weekend.

In Canada, union members went back to their jobs Oct. 21 after settling their five-day strike.

UAW President Owen Bieber said he was "confident" union members would ratify the proposed agreement reached after a 12-day strike which company officials said cost Chrysler $17 million daily. The ratification vote was scheduled following overwhelming approval last Thursday by the 170-member National UAW-Chrysler Council. The strike idled 70,000 Chrysler workers in the U.S.

The proposed pact met the UAW goal of providing Chrysler workers wage and benefit parity with UAW members at General Motors and Ford Motor Co. and, in fact, offered "parity plus," Bieber said.

Assuming a 4 percent annual inflation rate, a total of $5,650 will be added to the typical Chrysler worker's regular earnings over the 35 months of the proposed agreement, according to the UAW. An additional $4,400 or more will be gained through various scheduled bonus and profit-sharing payments.

Under the terms of the agreement, Chrysler workers will receive a $2,120 bonus in acknowledgement of the concessions made

Toyota near decision on U.S. plant site

TOKYO.—Toyota Motor Corp.'s process of selecting sites for its plants in the U.S. and Canada is proceeding full speed ahead and the final decisions will be made "before the end of the year, if not sooner," according to Kaneyoshi Kusunoki, executive vice president and chairman of the site committee.

"The sooner the better," Kusunoki said, "If the decision is delayed, it will take that much longer to complete the construction project."

Kusunoki heads Toyota's North America Project Office (NAPO) which is in charge of the U.S. and Canada plant project and is overseeing site selection, plant construction and local operation.

The U.S. plant will produce 2,000-cc passenger cars at an annual rate of 200,000 units beginning in autumn, 1988. The Canadian plant will have an annual capacity of 50,000 units and will begin producing 1,600-cc Corolla-type models also beginning in 1988.

Kusunoki said Toyota has presented its requirements for plant sites to officials in the U.S. and Canada who have expressed an interest in having the plant located in their areas and has asked them for information regarding the available sites.

Kusunoki said Toyota has received the information and the NAPO is analyzing the replies.

Important factors under consideration, Kusunoki said, include: Having parts vendors close by; the distance vendors have to transport their goods; location of the site in relation to markets for the product; availability of highways and railroads for transporting the finished product; population of the community, and availability of utilities, such as gas, water and electricity.

Kusunoki said it is not brick and mortar but the production line that is important in a plant.

In that sense, he said he would like to pattern the U.S. plant after Toyota's Tsutsumi plant in Toyota City because it has the newest production lines, although it is approximately nine years older than the auto maker's newest facility, the Tahara plant, which went into operation in 1979.

"Because we have had a lot of model changes in the last three or four years, we have improved the various production lines," he said. "Just because a plant is the newest doesn't mean it has the most modern production lines."

Kusunoki noted that the Tsutsumi plant manufactures mainly 2,000-cc passenger cars (Camry,

McGill joins staff; Hamilton promoted

Automotive News editors realigned

A top-level realignment of the Automotive News editorial staff has been announced by Keith E. Crain, publisher and editorial director.

Andrew R. McGill, 38, has been appointed editor, and Kathleen M. Hamilton, 33, has been promoted to managing editor. Both appointments are effective Dec. 1.

McGill succeeds Robert M. Lienert, 59, who has been named editor-at-large, and Hamilton succeeds John K. Teahen Jr., 60, who has been appointed senior editor. Both positions are newly created. Lienert and Teahen have a combined 63 years of service at Automotive News.

McGill currently is business-finance editor and assistant to the managing editor of the Detroit News. He joined the News in 1977 after five years at the Miami Herald, where he reported on business and real estate prior to becoming business-finance editor. He previously worked five years as a reporter and editor for United Press International in Detroit, Chicago and Western Europe.

At the Detroit News, McGill planned and edited the 1982 series GM: A Profile, which won the John Hancock Award for Excellence in Business and Economic Journalism. McGill also reported and wrote an award-winning 1977 study of community power and influence in Southeastern Michigan and a 1985 study of the long-term economic future of the region.

As editor of Automotive News, McGill will be the chief news officer of the paper and will oversee news coverage and presentation and help formulate editorial policies, directing a staff of 26 full-time editors and reporters—including those assigned to permanent bureaus in Tokyo, London, Washington, New York and Los Angeles.

In his new position, Lienert will be involved in a variety of special projects and will assist in staff direction.

Teahen will be in charge of the news editing operation and will

For third quarter

GM profit up 24 pct.; operations show loss

By Michelle Krebs
Financial Editor

General Motors reported a 24-percent increase in third-quarter earnings on record sales. However, GM showed a $20.9 million operating loss due to costly financing incentives offered during the period.

Sales for the quarter set a third-quarter record of $22.5 billion, up 21 percent from $18.5 billion in the third quarter of 1984. GM's best-ever sales quarter was the second quarter of this year when sales hit $25.1 billion.

Net income for the third quarter amounted to $516.5 million, or $1.46 per share, ahead of the $416.8 million, or $1.31 per share, earned in the same quarter a year ago.

The quarterly profit represented GM's second-best third quarter ever. The third quarter of 1983, in which GM earned $736.9 million, was GM's best-ever third quarter.

GM said its overall earnings were favorably affected by record earnings of General Motors Acceptance Corp., which amounted to $266 million; Electronic Data Systems' non-GM earnings reaching $51.9 million; investment tax credits amounting to $172 million, and gains from a weaker dollar.

However, GM said those factors were offset by costs related to its incentive campaign used during the quarter to stimulate U.S. car and truck sales. GM offered 7.7-percent financing following the summer strike by the Teamsters Union car haulers.

"The special financing program did reduce earnings," GM Chairman Roger B. Smith and President F. James McDonald said, "but it provided exactly what was needed to enable GM dealers to clear out most of the '85-model cars and light trucks prior to our 1986 model introductions."

Again in the third quarter as throughout the year, GM said earnings continued to be adversely impacted by costs relating to new models and facilities "required for GM to remain competitive."

For the nine months ended Sept. 30, GM earned $2.7 billion, or $8.24 per share, down 25 percent from 1984's record of $3.6 billion, or $11.51 per share, for the first nine months.

Sales for the first nine months this year set a record of $71.7 billion, up 14 percent from $63.0 billion in 1984's first nine months.

Worldwide factory sales to GM dealers hit a record 2,150,000 units for the third quarter, up 20 percent from the year earlier.

For the first nine months, worldwide factory sales set a new record of 6,975,000 units, up 12 percent from the previous year.

Smith and McDonald said the U.S. car and truck industry will surpass the 15-million unit level that they have projected for the 1985 calendar year.

"Model-year retail sales were extremely strong, and most signs indicate that the economy is fundamentally sound. That is good news for both the consumer and the auto industry," they said.

GM continues on track for a record-breaking year in terms of dollar sales. GM sales in 1984 hold the record with $83.9 billion. Sales for this year may well be over $90 billion.

At the same time, the average of analysts' forecasts shows GM will earn close to $3.70 billion in 1985. GM earned a record $4.52 billion in 1984 and $3.73 billion in 1983.

Honda introduces first luxury car

Honda Motor Co. has unveiled its first luxury sedan, the Legend, which is powered by 2.0-liter and 2.5-liter engines. The car goes on sale in Japan Nov. 23 with prices of $11,569 for the 2.0-liter ZI model and $14,625 for the 2.5-liter XI. The car was developed jointly with the Austin Rover Group and will be sold in the U.S. starting next April.

Honda's V-6 Legend enters luxury segment

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Honda Motor Co. has entered the luxury segment of the auto market for the first time with its new Legend, a top-of-the-line sedan featuring a 24-valve 2.0-liter V-6 engine.

The Legend will go on sale here Nov. 23, with a sales target of 1,500 monthly, and in the U.S. next April. It was developed jointly with the Austin Rover Group (ARG), of Great Britain.

Tadashi Kume, Honda president, said the firm expects to sell 20,000 to 30,000 units in the first year in the U.S. market, where it will be part of the Acura line.

ARG will build the car for sale throughout Europe, as well as in the U.K. ARG exports to the U.S. will begin early in 1987. In addition to producing the Legend for sale in Japan and the U.S., Honda will export the car to Asian countries, and will build the ARG version of the car for sale in Japan and Australia.

Kume said the car offers the best aerodynamics of any four-door sedan and will create a new market for Honda, which has previously specialized in small cars and motorcycles.

The Legend will sell in the Tokyo area for $11,569 for the 2-liter ZI model and $14,625 for the 2.5-liter XI model. Reportedly, the car will be priced between $18,000 and $20,000 in the U.S.

In styling, the Legend features a wedge-shaped profile with a low nose and high trunk that retains the recent Honda styling practice. However, the distinctive nose includes a central radiator grille flanked by slim-line contoured flush headlamps, each incorporating two halogen units. Below the grille and lamps is a large integral bumper and spoiler.

The rear-end treatment resembles the styling of the Prelude, with a horizontal design motif and a central plastic embellishment panel across the lower edge of the trunk lid, which opens virtually down to the bumper level.

Further aerodynamic details,

Finds 86 pct. in compliance with Regulation Z

FTC checks dealers on credit ads

By Jake Kelderman
Washington Reporter

WASHINGTON.—The FTC has proved once again that you can't necessarily make people do what you want them to. In this case, it is comply with the commission's rule regarding credit advertising in newspapers, and the people involved are automobile dealers.

In a report issued last week, the FTC said that it had convinced 92 percent of 929 dealers and dealer ad agencies previously not in compliance with its credit advertising guidelines to adhere to them.

At the same time, however, FTC reported that overall compliance with its advertising requirements was 86 percent and that dealers in some areas of the country were not as ready to step to the line as others. Nonetheless, it labeled the voluntary program a success.

"We are gratified by the way in which auto dealers have responded to our educational program, and we will continue to work with the industry to achieve maximum voluntary compliance," said Anne Price Fortney, FTC associate director for credit practices.

The FTC undertook the program in 1983 after it received numerous complaints about deceptive newspaper advertising of auto credit terms. It conducted a survey of dealers' newspaper advertising and found only a 70 percent compliance rate with its Regulation Z requirements.

Regulation Z is the implementing guideline for the Truth in Lending Act which requires credit advertisers to give consumers information that will enable them to compare credit terms.

Under the law, advertisers who state an interest rate must also provide the annual percentage rate (the total cost of credit). In addition, the use of certain terms in ads "triggers" the requirement to state other major loan terms. For example, some auto dealers were found to be advertising only the amount of the downpayment without stating the annual percentage rate or the repayment terms.

Under the voluntary compliance

GM's proposed van to have plastic body

By Dan McCosh
Detroit Reporter

General Motors' proposed front-drive minivan, slated for the 1989-1990 time frame, has emerged as yet another plastic-skinned program at General Motors. It brings to five the number of GM car programs involving plastic bodies being contemplated before 1990.

The rapid acceptance of plastic exteriors by GM could bring production of such cars—heretofore limited to specialty sports models—close to one million for GM by 1990, according to some sources close to the programs.

The front-drive minivan still does not have corporate approval, although the main consideration at this point seems to be which division gets it, rather than whether to produce it. Pontiac seems to be in the lead. Metalworking News reported recently that GM's Framingham (Mass.) assembly plant would be converted to produce the vehicle.

GM currently produces the Corvette and Fiero with plastic bodies, the latter with a unique "space frame." Chevrolet is also rumored to be quietly working on a sedan, while the GM80, the 1989-model replacements for the Chevrolet Camaro and Pontiac Firebird, likewise are expected to have plastic bodies. All are expected to feature a metal subframe, either in steel or aluminum.

Farther out, but rapidly moving out of the research stage, is a fully molded car, with metal used only in the high stress areas. GM's recently unveiled Wildcat show car (see Page 2) is built with that concept.

Other domestic auto makers, late in adopting the composite body, have recently been increasing development work.

At this time, Ford Motor Co. is not ruling out a composite body for its Alpha project (although GM's Saturn is still planned as a steel car). Chrysler Corp. is working on a plastic body for its new Z-van, due in 1988, and has a longer-range program studying full structural plastics for the mid-1990s.

Downey Toyota helps Mexican relief fund

DOWNEY, Calif.—Downey Toyota contributed $50 to the Mexican earthquake relief fund for every new and used car purchased over one weekend.

A total of $2,200 was donated to the cause.

Tax bounty poses problem for Spring Hill

SPRING HILL, Tenn.—City officials have postponed until Nov. 7 a decision on annexing land owned by General Motors for its Saturn plant.

The city has proposed that the Saturn site, now under the jurisdiction of Maury County, be annexed so that the city can share in the property taxes GM will pay. The city now is negotiating with the county for a share of the property taxes.

The Board of Aldermen earlier had voted 8-0 to approve the annexation upon a second reading. The final vote on the proposal was to have taken place last Tuesday (Oct. 22) but was postponed until November.

GM reportedly has threatened to withdraw the $3.5-billion project if the land is annexed.

Rover bares some details of XX model

By Richard Feast
European Editor

COVENTRY, England.—The decision by Honda to preview its luxury HX model in advance of this week's Tokyo Motor Show (Oct. 28-Nov. 11) prompted its Austin Rover Group (ARG) partners to reveal some of the details of the XX model which is to be made in England.

ARG's concern is that its version—scheduled for U.K. launch around next June—will be regarded merely as a spinoff from an existing Honda design, like the Rover 200 and Triumph Acclaim.

Harold J. Musgrove, ARG chairman and chief executive, insists that the new vehicle is an equal 50-50 engineering exercise.

The reasons for Honda's timing advantage of nearly nine months over ARG center on different methods of launching products in Japan and Europe, ARG's more extensive model range and Honda's ability to work more quickly with suppliers.

"We've learned from that," Musgrove admitted. He also acknowledged that a late redesign—"nothing unusual in that"—was another factor at ARG.

The ARG plan calls for a U.K. launch early next summer with a full model range and large stocks. The European launch will take place in the fall, and the North American introduction is slated for the beginning of 1987.

No U.S. marketing name has yet been decided, Musgrove said. Indications are that in Europe, the model will be known as the Rover 600.

The only version that will be

Agnelli says Fiat is eying export of Lancia to U.S.

By Michelle Krebs
Financial Editor

Fiat SpA is considering exporting to the U.S. one or more of its Lancia models, Fiat Chairman Giovanni Agnelli confirmed during a visit to Detroit.

Though Agnelli didn't specify which model or models would be exported, it has been speculated that the first model to hit U.S. shores will be a fast, more luxurious version of Lancia's current Thema model. The Thema, which originally was a Lancia-Saab joint venture, was introduced in Europe earlier this year.

However, the model likely to come to the U.S. will be a Thema with a Ferrari V-8 engine, which Fiat will introduce sometime in the first half of 1986. A four-wheel drive model will be introduced later.

Speaking to the Economic Club of Detroit, Agnelli said that aside from the Lancia, Fiat plans no major initiative in the U.S. market.

"We've been in and out of the U.S. market two or three times since the war," he said. "If you are European and you export luxury cars, you can make huge profits in the U.S. But if you are a European producer of popular cars with large numbers, you will be going head-to-head in the U.S. with the Japanese. It's easy to break your neck, and we're not willing to take the chance."

Fiat purchased Lancia in the mid 1960s. Agnelli said it has taken 15 years to integrate Lancia into the Fiat family. "It has taken some years of loss and many years of pain and trouble," he said.

The Lancia Division was at the break-even point last year, and this year, with its newer model range, is expected to increase its market appeal and improve its financial results.

THE CARVE-OUT TRUST*

- You can now establish a new Carve-Out Retirement Trust limited to only a small group of employees (e.g., salary and clerical)!
- You can shelter an annual amount up to your salary and bonus — tax free!
- You can enjoy over 85% to 90% of the annual tax-free contribution.
- We can convert your present plan(s) to a Carve-Out.

*A tax-exempt trust

Jerry Orefice has addressed national conventions, associations, "Twenty Groups," published articles in national magazines and also appeared on T.V. as a commentator on dealer tax planning and the Carve-Out Trust. Our firm has its own in-house legal counsel and a reputation for working with the top dealers in the country.

Memo units are Chevrolet Van, El Camino, Blazer and S-10; Dodge compact trucks; Ford Econoline and Bronco; GMC Vandura, Jimmy, Caballero and S-15. ☆—Miscellaneous includes imports, FWD, Hendrickson, Oshkosh, etc. —Compiled from R. L. Polk & Co. data

In address to auto-district congressmen

Smith backs Reagan's policies

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—President Reagan has a friend in Roger B. Smith, chairman of General Motors.

Addressing a group of congressmen from auto-producing districts, Smith echoed the President's policies on issues ranging from taxes to South Africa's apartheid system.

He even borrowed a line or two from the President's speechwriters, saying on the issue of world competition, "We're going to have to fight it out sooner or later, and if not now . . . then when?"

Referring to a Democratic trade bill that would impose a 25-percent tariff on imports from nations with high trade surpluses, Smith said he has a "hard time explaining to our shareholders why a tax on Japanese imports would be bad for General Motors."

He said the measure would lead to retaliation against U.S. exports and asked, "What do we tell our farmers who can't sell their corn and chickens in Japan?"

Smith touched on recent GM projects and acquisitions, mentioning Saturn, the purchase of EDS, the purchase of Hughes Aircraft and GM purchases and joint ventures in the robotics field.

Blunting criticism that the U.S. auto industry has tried to meet its competition by automating plants rather than improving worker attitudes, Smith lauded GM's labor contract with the UAW.

He said, "We guaranteed that if an employe is laid off because of the introduction of new technology, outsourcing, or negotiated productivity improvements, he won't be out on the street."

Smith said GM uses an average percentage of U.S.-made parts in the "high nineties."

He said, "People and high technology—that's the general strategy which is going to help us move aggressively into the future to protect our position as the world leader of car and truck manufacturing."

Although GM was unable to meet government-mandated CAFE standards and petitioned successfully for a rollback, Smith defended GM's fuel-economy record.

"GM cars are 22 percent lighter than they were in 1974, an average weight reduction of some 1,100 pounds," he said, "and we doubled the fuel economy of the cars we produce."

He said, however, "The fuel-economy standard was relaxed for 1986, which was greatly appreciated, but did not adequately address the problem. A similar adjustment for future model years is equally as important in order to avoid the potential of curtailing production of some car lines and throwing thousands of employes out of work."

Smith pointed to progress on the safety front, referring to Highway Loss Data Institute reports that show "year after year that overall injury claims of GM car owners are among the lowest in the industry." Many of those vehicles are the same large, V-8s that lead to GM's CAFE troubles.

He also told lawmakers they should "first and foremost" reduce the federal deficit and that "tax reform should be a top national priority." He said the key in both areas is "shared sacrifice" and "fairness."

On South Africa, Smith said that "a number of U.S. companies with facilities in that country have formed the U.S. Corporate Council on South Africa."

He said, "We have a history of being very clear about our strong opposition to apartheid and have made this opposition known to the South African Government.

"By being in South Africa, we think we may make a difference in moving more rapidly toward these goals, helping to bring an end to the tragic loss of life in that country while accomplishing peaceful but meaningful change."

8 technicians hit the heights in Chevy tests

Continued from Page 16

area of specialization in which they will compete during the entire year of the Performance Challenge. The eight areas are:

Brakes, suspensions and steering; gasoline and diesel engine overhaul; engine performance; automatic/manual transmissions, transaxles and rear axles; electrical, heating and air cooling; medium-duty truck; body metal, and body paint.

Level 1 of the Performance Challenge requires each technician to take a written test, competing against technicians in the same specialty in his Chevrolet geographical area. Winners in each specialization in each of the 320 areas receive a gift and proceed to the Level 2 exam.

Winners of the second exam are the highest scorers in each of the eight exam categories in each of Chevrolet's 39 zones and receive a $100 award. Level 3 testing reduces the competitors to the top technician in each of the eight specializations for each of Chevrolet's six regions. Each winner receives a $250 award.

The remaining 48 technicians—eight from each region—then take part in the Level 4 competition at Chevrolet headquarters here. The eight winners in the final test and their spouses are honored at a special dinner, and the remaining 40 technicians each receive a $500 award from Chevrolet.

dom, introducing premium models with analog dashboards.

It would be a shame to read one day that the market research staffs of our own auto makers were found to be in the same position as that well known team from Coca-Cola.—**David J. Rivkin,** Forest Hills, N.Y.

Mercedes blamed

I am writing in regard to the article "Mercedes letter slaps gray market" in your Aug. 12 issue.

The gray market was created by Mercedes-Benz itself by raising the price of U.S. models out of the sky, even though our strong dollar would suggest the opposite.

In Paris, one can still purchase a 190-E new for less than $13,000—a 50 percent discount off what it sells for in the U.S. (granted there is almost $1,500 worth of extra equipment and regulations built into a U.S. version).

When the spread (which equals extra profit on cars sold in the U.S.) is as wide as $25,000 on some models, even the affluent (by foreign standards) U.S. buyers stop being gullible and generous and start to look for ways to reduce their own household deficit.

With its decision not to service gray-market vehicles, Mercedes-Benz of North America lost many previously loyal customers to independents. For each dealership that refuses, there are at least 25 highly qualified and "factory-trained" Mercedes service facilities with prices less outrageous than those of their dealers.

M-B spends millions fighting the gray market and independent parts suppliers to maintain its double standard and keep its insane profits coming from the U.S. But its management soon will realize that the U.S. economy is governed by the spirit of free enterprise. Dictatorship and greed can go only so far in a free society. —**Ted W. Kennedy,** Kennedy Coach Works, Anaheim, Calif.

Centennial logo

One of two winners in the international poster contest sponsored by Daimler-Benz for the 100th anniversary of the automobile celebration is this creation from Alan Fletcher, of London. His design is also being used by Daimler-Benz as its centennial logo.

In attorney general's report

Makers found wanting on Conn. lemon law

HARTFORD.—In a new 113-page report on the state's first-in-the-nation automobile lemon law, Connecticut Attorney General Joseph I. Lieberman has charged that the bulk of the manufacturers are not displaying "a serious commitment" to resolving disputes with new-car buyers.

He said that only nine of the 43 manufacturers responded to a state questionnaire on their dispute settlement programs.

Noting that his office now has subpena capability to compel compliance with such requests in the future, Lieberman said, "The motor vehicle manufacturers exhibited a lack of cooperation with our requests for data, which indicates to me a general lack of concern for consumer relations.

"There's no trade deficit in the auto industry when it comes to customer relations," he said. "The Japanese, the Germans, the Italians and the Swedes are right up there with the Americans in terms of how poorly they serve consumers with complaints."

State Rep. John J. Woodcock III, who was the catalyst for the 1982 Connecticut state legislation, attended the same news conference. He contended that the automobile manufacturing community appears "more interested in window-dressing and PR. The manufacturers really aren't giving this particular law the time of day."

Both Woodcock and Lieberman said that Connecticut has sought to force manufacturer compliance with the guidelines of the lemon law. They said that the manufacturers' challenge of the law's very constitutionality—filed in Hartford Superior Court last March—is expected to be heard by the State Supreme Court.

For their part, the manufacturers are saying that the law is unfair per se because, while consumers may either accept or reject the arbitration panel's recommendation, the manufacturer has no choice but to accept the finding (unless it can be demonstrated that the decision was either arbitrary or capricious).

Under the state's lemon law, a new car or refund must be provided by the manufacturer if a defect cannot be repaired after four dealer attempts or if the car is in the shop for more than 39 days in its first two years (or 18,000 miles).

Rangers, Broncos recalled by Ford

DEARBORN.—Ford Motor Co. is recalling 4,000 1986-model Ranger and Bronco II vehicles equipped with 2.9-liter electronic-fuel-injected engines for replacement of a nylon fuel line.

Company studies show the two-inch, low-pressure hose may crack, allowing fuel to leak.

Another 28,000 1986-model Ranger and Bronco II vehicles will be corrected at the assembly plant or at Ford dealerships before delivery to customers, Ford said.

Winning posters selected in auto centennial contest

FRANKFURT, West Germany.—Alan Fletcher, of England, and Helmut Gratzfeld, of West Germany, won the international poster contest held as part of the preparations for the 100th anniversary of the automobile.

Fletcher, whose poster is being adapted for use as a logo, and Gratzfeld had the two most successful entries in a contest that drew more than 1,300 submissions from 25 countries.

The contest was sponsored jointly by Daimler-Benz and Auto Motor und Sport, a German automotive magazine.

Daimler-Benz, the world's oldest auto maker, will use the logo and the various posters to help celebrate its 100th anniversary. The official ceremonies will take place Jan. 29, 1986, 100 years to the day after Carl Benz was granted a patent for his first car.

Fletcher is a founder of Pentagram, Ltd., London. Gratzfeld runs an advertising agency in a Cologne suburb.

In addition to the first-place tie, there was also a tie for third. Work done by Andre Francois, a French graphic designer, and Thierry Thompson, an American living in Toronto, shared third place.

Fletcher's design features a bold white "100" with the "1" canted and raised slightly above the level of the two zeros so that it bears a figurative resemblance to an automobile.

The top nine entries received cash prizes, with Fletcher's and Gratzfeld's being 15,000 marks (slightly more than $5,000) apiece. Another 13 posters were given honorable mentions.

Tied for first

Helmut Gratzfeld's entry tied for first place in the international poster contest sponsored by Daimler-Benz as part of the 100th anniversary of the automobile celebration. Gratzfeld is a West German.

Burlington to make fabrics for U.S. auto market

GREENSBORO, N.C.—Burlington Industries will start making fabrics for the automotive industry under an agreement signed with Seiren Co., Ltd., a Japanese supplier of car seats and side panel cloth. Seiren sold Burlington the right to use technology that the Japanese firm had developed.

Burlington said it will make the fabric in the U.S. and could begin to sell it to domestic auto manufacturers in 12 to 14 months.

New-car sales in Canada advance 14 pct. for August

By Jenny L. King
Detroit Reporter

New-car sales in Canada were up 14.04 percent August to August. Truck sales advanced by more than 8,000 units, for a percentage gain of 49.56 percent.

The five major domestic auto makers reported passenger-car sales of 61,233 units in August, up 14.04 percent from 53,694 a year earlier. As was the case in the U.S., several companies were offering low-interest-rate financing to buyers of certain car and truck models, a fact that stimulated month-end results.

General Motors, where 8.8-percent financing was available, finished the month 22.59 percent ahead of 1984, with sales rising to 30,113 from 24,563. Ford sales were up 16.14 percent, to 14,725 from 12,679. Chrysler's North American-built car sales edged up 1.18 percent, to 13,339 from 13,184.

American Motors reported August sales of 2,303, down 5.19 percent from 2,429. The AMC numbers included 490 imported Renaults this year, compared with 657 in 1984. Volvo sales dropped 10.14 percent, to 753 from 838.

GM's share of the market moved up to 49.18 percent from 45.75 percent. Ford held 24.05 percent of the total, up from 23.61 percent. Chrysler dropped to 21.78 percent from 24.56 percent. AMC was down to 3.76 percent from 4.52 percent, and Volvo finished the month with 1.23 percent, down from 1.56 percent.

New-car sales January through August were up 7.55 percent, to 556,996 from 519,765.

August truck sales totaled 25,801, up 49.56 percent from 17,251 last year. The total included increases for all four major truck makers.

AMC Jeep had the biggest percentage gain, up 71.20 percent to 642 from 375 in August, 1984. Ford truck sales were up 53.74 percent, to 9,003 from 5,856. Chrysler reported a 50.31-percent climb, to 4,126 from 2,745, and GM was up 45.38 percent, to 12,030 from 8,275.

GM's share of the August truck market slipped to 46.63 percent from 47.97 percent. Ford moved up to 34.89 percent from 33.95 percent. Chrysler had 15.99 percent compared with 15.91 percent, and AMC grew to 2.49 percent from 2.17 percent.

Truck sales for the first eight months of 1985 were up 25.99 percent from their 1984 level, rising to 222,623 from 176,696.

Taiwan hoping to resume talks on Toyota project

TAIPEI, Taiwan.—Taiwan is still interested in a joint venture with Toyota Motor Corp. to make compact cars in Taiwan, according to Chao Yao-tung, chairman of Taiwan's Council for Economic Planning and Development.

Chao said he would like to bring the two sides together to resume talks if Toyota is still interested in the venture.

Toyota and Taiwan discussed the $265-million project to produce 300,000 cars annually for exports and domestic sales.

The talks were aborted last year, according to Chao, because Toyota and Taiwan authorities failed to reach an agreement on export quotas and local-content rates.

Since then, Chao said, "the government has substantially relaxed restrictions on the automobile industry, particularly export ratios and local-content rates."

Chao said the government also plans to further relax restrictions on foreign investment in Taiwan.

Finds 86 pct. in compliance

FTC checks dealers on credit advertising

Continued from Page 3

program, FTC staff reviewed thousands of auto credit advertisements in major newspapers in 16 cities and then contacted those who were not in compliance with its guidelines. That number came to 929 dealers.

According to the FTC, dealers in St. Louis and Minneapolis-St. Paul did the best job of coming into compliance (98 percent) while those in Dallas did the poorest job (83 percent).

Here is a list of how dealers in other major metropolitan areas did in terms of coming into compliance with FTC's guidelines:

Atlanta, 91 percent; Boston, 86 percent; Chicago, 96 percent; Denver, 85 percent; Houston, 96 percent; Kansas City, 88 percent; Los Angeles, 97 percent; Miami, 86 percent; Philadelphia, 91 percent; San Francisco, 97 percent; Seattle, 88 percent; Virginia Tidewater area, 96 percent, and Washington, 93 percent.

According to Fortney, the FTC plans to take formal action against those dealers still not in compliance with its regulations. Civil penalties of up to $10,000 per violation are possible, she said.

Meanwhile, FTC attorney Carole Reynolds said the staff had also monitored some television advertising by dealers but that its primary focus was newspaper advertising.

Newspaper advertising typically comprises about 60 percent of the total ad budget for rural dealers with another 24 percent spent on radio and just 4 percent on television. Metro dealers, on the other hand, spend 55 percent of their ad dollars on newspaper advertising, 20 percent on television and 16 percent on radio.

Reynolds could not cite the compliance rate for proper credit advertising by dealers on the electronic media.

FTC regulations do not specify how long credit terms must appear on the screen in television ads, only that they be "clear and concise." Recently, a number of Washington-area dealers agreed to adjust their television advertising of auto credit terms at the request of the various consumer protection offices in the metropolitan area.

NADA spokesman Robert Wade said the FTC findings "reflect the good job the nation's auto dealers are doing in advertising credit availability."

The regulations have not been the clearest, he said, noting that such new forms of financing as "interest subvention, balloon payments, etc.," are "tricky and complex."

NADA regularly informs its members of FTC requirements on advertising, but not everyone gets the message, Wade said in explaining the variations in compliance from city to city in the FTC survey.

Different advertising patterns become established and it's hard for dealers not to follow suit to stay competitive, he said in explaining the compliance rate variance between Dallas and St. Louis.

Yanase recalls 197 GM vehicles

TOKYO.—Yanase and Co., a leading Japanese importer of motor vehicles, said it will recall 197 GM cars it sold in Japan.

The recall involves Buick and Pontiac models which Yanase imported between September, 1977, and April, 1980.

A weak packing plate in the rear-wheel brake may cause brake-fluid leakage.

Domestic sales plunge 26 pct. for mid-October

Continued from Page 2

At Ford Motor Co., Ford plunged 41.85 percent, Mercury was down 46.18 percent and Lincoln was down 3.24 percent.

Buick dropped 38.88 percent, Cadillac was down 42.06 percent, Chevrolet dipped 26.89 percent, Oldsmobile was off 14.92 percent and Pontiac slipped 14.02 percent.

Estimated sales of 300 AMC Eagles matched the year-earlier total; Renault was off an estimated 34.19 percent. VW was up 28.67 percent and Honda was up 31.56 percent.

Ford's Escort, with sales of 8,189 units, led the domestics in mid-October, followed by Chevrolet Cavalier at 6,599, Oldsmobile Cutlass Ciera at 6,561, Chevrolet Celebrity at 6,466 and Buick Century at 5,722.

NADA elects 1986 officers; staff VP named

Continued from Page 2

all activities at NADA and its related organizations.

As head of the Industry Analysis and Dealership Operations Division, Ferron was responsible for NADA's analysis and research of the car and truck industry and directed the 20 Group Program, Sales Trak, Service Systems Consulting, Dealer Candidate Academy and Management Education divisions.

He also is co-author, with Jake Kelderman, of Automotive News' Washington bureau, of Betting on the Franchise—Car and Truck Retailing into the 1990s.

In another NADA development, it has been learned that David Paxson, director of the American Truck Dealers Division, is leaving the association to do enter the field of health-care policy analysis.

Production in both countries slated for fall of 1986

Toyota near site decision in U.S., Canada

Continued from Page 1

Vista, Corona and Celica), the class of car Toyota plans to build in its U.S. plant.

He said Toyota does not have a production line in Japan that produces cars at the 50,000-unit annual capacity planned for Canada.

"Therefore we do not have a line in Japan that we can duplicate and put in the Canadian plant," he said. "But we have some experience with overseas plants that have small production and, therefore, I am thinking of introducing such a line in the Canadian plant."

Kusunoki said he would try to establish a line in the Canadian plant that is flexible enough to produce more than 50,000 units if the market demands more cars.

"I would like to build the same type of plant in the U.S. and Canada," Kusunoki said, "but that would be difficult because the capacity scales are different.

"If you're going to establish yourself overseas the only way to proceed is slowly," he said.

Kusunoki cited New United Motor Mfg., Inc. (NUMMI), Fremont, Calif., Toyota's joint venture with General Motors. He said the plant was started with one line in April and in December the firm will start operating two shifts.

Kusunoki noted that the NUMMI plant has a fixed production capacity of 250,000 units annually authorized by the FTC.

"If GM wants 200,000 units, we can produce only 50,000 units for our dealers at the Fremont plant," he said.

"Depending on the market situation, maybe more production will be required from the Canadian plant," he said. "So we are studying a reasonable line that could produce 50,000-plus units if needed."

Asked if Toyota would have to provide GM with more than 200,000 units if GM requested them, Kusunoki said Toyota's agreement is to supply that number of cars and if GM wants more, the decision on whether to provide them "is something we will have to discuss.

"We have no interest in getting into any arguments with GM over the production of 10,000 or 20,000 units," Kusunoki said.

As for procuring components for the assembly operations in the U.S. and Canadian plants, Kusunoki said the most important criteria are quality and price.

However, he cautioned that if the desired quality and price are not available in the U.S. and Canada, Toyota may decide to make the parts within the company and not procure them from outside vendors.

"It could be that the quality and price would not be available in the U.S.," he said. "In that case, we would have to supply the plants from Japan.

"But if manufacturers are available and can meet the criteria, we would like to utilize them as much as possible," he said. "For this purpose, we have to make a survey and study the parts situation in Canada and the U.S."

Kusunoki said NAPO has dispatched a team of 20 Toyota officials to look over the availability of parts in both countries and will wait for the group's report before making any decisions.

He also noted that Toyota has a base of experience in obtaining parts in the U.S. through its connection with NUMMI.

In the case of NUMMI, Kusunoki said Toyota found that some components were not available in the U.S. under the prescribed criteria and "we had to change our policy and obtain them from Japan and other sources."

Kusunoki said GM also could be involved in supplying Toyota with parts for its assembly operations.

"They (GM) have a parts division and it is possible that we could get components from them," he said. "But GM also would have to meet the quality and price requirements we have established to qualify as a parts supplier."

Because the Canadian plant and NUMMI will be building similar cars, Kusunoki said it also "is possible that the parts procured in the U.S. by NUMMI can be sent to Canada for incorporation in cars being assembled there."

Kusunoki said that if Toyota cannot sell all the units produced by its Canadian plant in that country, the Japanese firm would consider the possibility of exporting them to the U.S.

Kusunoki also revealed that the companies Toyota plans to establish to operate the two plants would make the decision on whether to recognize or negotiate with a union.

"It is not up to us to decide this question but up to those who will be in charge of the Canadian and U.S. operations," he said. "If we made that decision, it could be interpreted as a violation of labor laws in the U.S. and Canada."

He also said Toyota would not assist Japanese vendors in selecting sites by taking land options for them in the vicinity of the proposed assembly plants.

He emphasized that Japanese parts vendors will have to compete with American vendors and American parts vendors will have to compete with their Japanese counterparts for Toyota's business.

Imports capture first four places

Japanese tops in sales per dealer

Continued from Page 1

Dodge. Domestics with light trucks include Chevrolet, Ford, Plymouth, Dodge, Nissan, AMC and GMC dealers.

The lineup on the new-car averages table featured Honda on top, as it had been a year earlier after moving up from third place in 1983. Mitsubishi pushed Toyota out of second place into third. Nissan (including imports and Smyrna cars) and Oldsmobile remained fourth and fifth, respectively. Chevrolet leaped over Buick into sixth place, Buick slipped into seventh, while Ford, Volvo and Pontiac remained eighth, ninth and tenth.

Major moves closer to the top of the car chart were made by Mercedes, BMW and Isuzu dealers as Cadillac and Renault dropped several notches apiece.

After the records have been duly noted, it is interesting to look back at better days for some of the makes, particularly the imports. The following comparisons involve only new-car sales per outlet. For example, VW's heyday was in 1968, when dealers averaged 254 sales per outlet in the first half of the year. Mazda's first-half record was 200, set in 1973; Porsche had 57 in 1970, Fiat had 68 in 1975, Triumph had 42 in 1977, Dodge Colt had 24 in 1977 and the Plymouth Arrow (now also Colt) had 19 in 1977.

The top-average domestic nameplate in terms of sales per franchise was the Oldsmobile Cutlass Ciera with 55 this year versus 64 for the standard Cadillac in 1984. Cadillac's 53-unit average reduced it to second place, followed by Chevrolet Cavalier at 46, VW Golf at 45 and Ford Escort at 43.

A year earlier first-place Cadillac was followed by Olds Cutlass Supreme, VW Rabbit, Olds 88 and Olds Cutlass Ciera.

Golf replaced Escort as the highest-average-per-outlet subcompact. Cavalier improved its lot substantially, remaining the top compact and far ahead of challenger Tempo. Ciera was the best among the intermediates, Olds 88 remained the strongest standard and Cadillac maintained its no-contest hold on first place in the luxury-car category.

At GM, the best-average nameplate for Buick dealers was Century at 39 per franchise. Cadillac (DeVille and Fleetwood), at 53, was strong for Cadillac dealers. Cavalier topped the Chevrolet list with a 46-per-outlet average. Ciera at 55 was best for Oldsmobile and the 6000 at 26 was high for Pontiac.

Ford's Escort at 43 provided that division's best average. In marked size contrast, Grand Marquis was best for Mercury at 25 per dealer, and Lincoln Town Car at 34 per dealer was Lincoln's strongest.

Plymouth dealers had their greatest success with Reliant at 26 per franchise; Dodge's Aries at 20 was best, and Chrysler's rear-drive Fifth Avenue was a star at 17. AMC dealers sold more Alliances per franchise, 25, than Encores or Eagles.

Chrysler plants due back today

Auto output still affected by strike

By Kathy Boyer
Detroit Reporter

Last week's auto output continued to reflect the strike at Chrysler Corp.

Though Chrysler and the UAW reached a tentative agreement Oct. 23, the company's plants were not scheduled to resume production until today (Oct. 28).

Last week's estimated build of 151,990 cars fell 3.69 percent from the previous week's 157,820, a total which was also affected by the Chrysler strike.

But the makers' target was 5.18 percent above the year-ago week's 144,506, when the General Motors strike in Canada caused slowdowns in the company's U.S. plants.

So far this year, 6,839,626 cars have been assembled, 4.54 percent more than the 6,542,829 completed last year at this point.

Companies shared last week's scheduled production as follows: GM, 67.77 percent; Ford Motor Co., 24.77 percent; Honda of America Mfg. Co., 1.90 percent; American Motors, 1.81 percent; Volkswagen of America, 1.55 percent; New United Motor Mfg., Inc., 1.25 percent, and Nissan Motor Mfg. Co., U.S.A., 0.95 percent.

AMC's Kenosha plant was down the week of Oct. 14 for inventory adjustment.

Saturday (Oct. 26) overtime was scheduled at GM plants in Framingham, Mass.; Tarrytown, N.Y.; Lordstown, O., and Orion Township, Mich.

Ford has scheduled daily overtime this week (Oct. 28) at the following plants: Chicago; Dearborn; Edison, N.J.; Kansas City; Lorain, O.; Wayne, Mich., and Wixom, Mich.

Ford's Kansas City plant is slated for overtime Saturday, Nov. 2.

SME automation exhibit opens Nov. 4 in Detroit

DETROIT.—The Society of Manufacturing Engineers' big factory automation show, Autofact '85, opens Nov. 4 at Cobo Hall here.

The show will occupy the entire convention center, an unusual occurrence at the big facility, and some 25,000 are expected to attend.

Emphasis throughout the corporate exhibits, and running as a common thread through technical sessions, will be on computer integrated manufacturing (CIM), rapidly advancing technology that is considered a must for U.S. competitiveness in world markets.

"Manufacturing is going to change faster in the next 15 years than it has in the past 75," said James M. Hardy, president of the SME's Computer and Automated Systems Assn. "Manufacturers must develop well-defined, long-range goals with a full understanding of—and a commitment to—CIM.

"Those companies that are unwilling or unprepared to make such forward-thinking commitments probably will not be able to compete," Hardy said.

One of the roadblocks to implementation of CIM is a threatening lack of standardization, he said.

In turn, one major move toward standardization already has been made by U.S. auto makers, led by General Motors. A common machine language, linkage or protocol, called Manufacturing Automation Protocol (MAP) and Technical Office Protocol (TOP) is being used.

The standardized machinery linkage will be seen in action at Autofact '85 in the combined MAP and TOP exhibit sponsored by GM and Boeing. The quarter-acre display will contain machinery, equipment and instruments built by some 25 companies and it all will be communicating compatibly through the MAP and TOP linkage.

"The demonstration exemplifies the integration of information required in the factory of the future," Hardy said.

25-year dealer

BROWNING, Mo.—Rex E. Hooker has received a 25-year-dealer award from Chevrolet.

Truck production slips 1.5 percent with Chrysler out

Domestic makers' estimated production of 69,886 trucks last week fell 1.45 percent from the previous week's 70,911.

Both weeks' totals reflect the strike at Chrysler Corp.

According to the tentative agreement reached Oct. 23, the company's Warren (Mich.) plant is scheduled to resume production today (Oct. 28).

Last week's targeted output was 10.12 percent more than the 63,465 units built during the year-ago week, when U.S. production was slowed by a strike against General Motors in Canada.

So far this year, 2,800,537 trucks have been assembled, 8.06 percent more than the 2,591,646 units completed last year at this time.

GM scheduled overtime Saturday (Oct. 26) at its Lordstown (O.) plant.

Ford Motor Co. plants in Kansas City; Louisville; Lorain, O.; Wayne, Mich., and Norfolk are scheduled for daily overtime this week.

Overtime is scheduled for Saturday (Nov. 2) at Ford's Lorain and Wayne plants.

GM's Pontiac No. 2 plant was shut down Oct. 14 because of a softening demand for medium-duty trucks.

The plant, which assembles GMC and Chevrolet medium-duty trucks, is scheduled to resume production today.

Chrysler back; output of trucks rises in Canada

Chrysler Canada and the UAW came to an agreement on Sunday, Oct. 20, which brought workers back to the plants on Monday, Oct. 21.

However, because of a parts shortage caused by the continuing strike in the U.S., the Canadian plants worked only half shifts last week.

As a result, Chrysler's truck production estimate—which was reported for a full work week—was optimistic.

The Canadian makers targeted production of 18,434 trucks last week, 87.91 percent more than the previous week's 9,810.

The prior week's total, reflecting the strike and the Thanksgiving holiday, was the lowest build since mid-August.

Last week's estimate was 49.18 percent more than the 12,357 units built during the year-ago week when the General Motors strike was in progress.

So far this year, 693,241 trucks have been assembled, 4.41 percent more than the 663,952 units built last year at this point.

Last week's estimated production of 24,160 cars was 24.34 percent more than the previous week's 19,430, which included the holiday.

Last week's output soared 114.11 percent above the year-ago week's 11,284 units, when production was cut by the General Motors strike.

So far this year, 879,833 cars have been assembled, 1.97 percent more than the 862,858 units built last year at this point.

Down 38 for first quarter

U.S. dealer total declines

By John K. Teahen Jr.
Managing Editor

After two years of increases, the domestic dealer population opened 1985 on a sour note.

In the first three months of this year, the industry lost 38 outlets. The quarterly Automotive News census found 20,864 dealerships handling domestic makes of passenger cars on April 1, compared with 20,902 on Jan. 1.

Last year, the total went up seven in the first quarter.

Only Chrysler Corp. was on the plus side this time, and Chrysler's total rose by just one outlet.

Elsewhere, there were declines of 20 dealerships for General Motors, 11 for Ford Motor Co., five for Volkswagen and three for American Motors-Renault.

The number of intercorporate duals remained the same on the two census dates, so what you see is what you get—a dip of 38 establishments.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

Chrysler boosted its dealer total for the 10th copnsecutive quarter. That string, which began in the fourth quarter of 1982, has seen Chrysler add 360 outlets to its dealer organization.

Ford Motor's decline followed seven straight quarters on the up side. The company added 161 dealers during those seven periods.

Although the domestic dealer count has increased in each of the last two calendar years, there wasn't a gain every quarter.

In 1983, the total declined in each of the first two quarters, but second-half gains put the year in the black. Last year, a first-half upturn was followed by a third-quarter slip and a fourth-quarter gain.

So there's still a chance for a third consecutive yearly rise despite the first-quarter loss. The 1983 gain was the domestic industry's first since 1955, and 1983-84 marked the first time since 1947-48 that there have been two increases in a row.

On the franchise side, gains and

Makers in new round of 8.8 pct. financing

By Edward Lapham
Marketing Editor

The finance-rate sales incentives which expired last week were so successful that a whole new round has replaced them.

Chrysler Corp. kicked off the latest round with an 8.8 APR program on its H-bodies, Chrysler LeBaron GTS and Dodge Lancer. The program began April 26 and has no termination date. It has a 90-month cap.

Chrysler ended an 8.8 APR program on L-bodies and G-bodies on April 30. The L-cars are Omni, Horizon, Turismo and Charger; the G-cars are Laser and Daytona.

General Motors jumped right back into the financing rate incentive battle with an 8.8 APR program which runs throughout May. The vehicles in GM's program are a mixed bag.

Included are the Chevrolet Cavalier, Pontiac Sunbird, Oldsmobile Calais, Buick Somerset Regal plus the Cadillac Eldorado and Seville models.

The program also applies to Chevrolet S-10 Blazer and GMC S-15 Jimmy vehicles.

GM said the odd mix of vehicles, two of five J-cars, two of three N-cars and two luxury cars, reflected divisional choices.

"Each division made a recommendation of which model, or models, it wanted to include in the program based on what it wanted to promote," a corporate spokesman said.

The new GM program replaced a similar 8.8 APR incentive on all of the J-cars plus Fiero and the S-10 and S-15 pickup trucks.

"We got into that program so our dealers would have something to compete with the other programs," the GM spokesman said.

Last Friday, Ford started a new 8.8 APR program on the just-launched 1985½ Escort and Lynx plus 1984 and 1985 Bronco II models and 1985 Continental and Mark VII models.

The program is through Ford Credit financing only, has a 48-

breaking news

UAW's AMC leaders to meet in Detroit

DETROIT.—Local UAW leaders from three American Motors plants will meet at Solidarity House today (May 6), presumably to discuss strategy in upcoming local contract talks. AMC has said that locals in Kenosha and Milwaukee must agree to concessions and early contract talks if those two plants are to stay open. Milwaukee is a stamping operation and Kenosha builds the Alliance and Encore. The company has said Kenosha is the most expensive plant in the industry. The current agreement expires Sept. 15 but talks are expected to begin this month, concluding long before the contract expiration date.

Charpie to head information council

DETROIT.—Chuck Charpie, formerly manager of public relations at Dana Corp., has been named president of the Automotive Information Council. The council has 600 company members and 75 trade association members. It functions as a central source for information on the motor-vehicle industry for the media, governmental bodies and others. The presidency had been vacant.

An old favorite returns

Chevrolet will offer a Corvette convertible for the 1986 model year. American Sunroof Corp. will do the conversion at its plant in Bowling Green, Ky. The Corvette assembly plant is also in Bowling Green. This will be the first Corvette ragtop since 1975.

FDA establishes fund to fight overdealering

By John A. Russell
New York Staff Writer

HACKENSACK, N.J.—A first-in-the-nation legal defense fund to fight alleged overdealering was established last week by the Ford Dealers Alliance. Its first target will be Ford Motor Co. in New Jersey as the company moves to fill what it considers open points in the state.

The defense-fund action was spawned by Ford's move to reopen an old dealer point in East Orange. This was met with protests from dealers in the immediate eight-mile area and is now the subject of an administrative hearing before the state Motor Vehicle Commission.

Ed Mullane, president of the Ford Dealers Alliance, has called on all Ford dealers in the district to contribute to this legal defense fund to fight the company on the issue of overdealering.

"This is a showdown on additional points," Mullane said last week, claiming Ford wants dealerships on every corner "like Dairy Queens."

The Ford Dealers Alliance sent letters to the 119 dealers in the old Newark and Philadelphia districts. This encompasses all dealers in New Jersey and reaches as far as Albany.

In his letter, Mullane told dealers: "We must set up a legal defense fund to encourage dealers to stand up for their rights and to share the costs of contesting this and other add points."

He opened the fund with a check for $500.

East Orange reopened a sore point among many dealers.

Under New Jersey law, Ford must notify dealers within an eight-mile radius of the open point. There are 11 or 12 dealers affected by Ford's move. Those dealers protested before the Ford Dealer Policy Board and did not receive a favorable opinion. Consequently, five of the dealers took action on the state level before the

Aerospace firm to be sold this month

GM, Ford interested in Hughes

By Michelle Krebs
Financial Editor

As the deadline for the bidding on Hughes Aircraft Co. approaches, General Motors and Ford Motor Co. are believed to be the front-runners.

Wall Street analysts say the auto makers are in the best financial position to buy the privately held aerospace firm, which will be sold by the end of the month.

At the end of the first quarter, GM's cash and marketable securities totaled $8.4 billion, while Ford's amounted to $5.3 billion, analysts note.

Hughes Aircraft also fits in well with the auto makers' strategies to become more high-tech and it complements their present products.

GM already has made acquisitions in the high-tech area, including its $2.5-billion purchase of Electronic Data Systems, Inc., and minority interests in five machine vision companies.

GM Chairman Roger Smith has said the company is shopping for other acquisitions on the scale of EDS. He has said about 20 percent of GM's business could be non-automotive by the year 2000.

GM officials also have said they plan to double or triple GM's $800-million-a-year defense and space business within the next two to three years. They have confirmed GM is contemplating future mergers, equity agreements or joint ventures with defense contractors.

Hughes Aircraft, which employs about 70,000, is the nation's ninth largest defense contractor with 1984 sales amounting to $4.9 billion. Its interests include missiles, satellites, lasers and radar systems.

Both Hughes Aircraft and GM are involved in the government's Strategic Defense Initiative, known as "Star Wars." In addition, GM provides the government with electronics and navigation and guidance systems.

Ford has been in the satellite business for more than a decade through its Ford Aerospace subsidiary.

Nevertheless, neither auto maker would confirm nor deny intentions regarding Hughes Aircraft.

In the past few months, however, GM's top executives have confirmed the auto maker's inter-

Despite record-breaking sales

Big 4 quarterly earnings decay

By Michelle Krebs
Financial Editor

The four major domestic auto makers enjoyed their best-ever quarter for sales, but earnings were off substantially from last year's first quarter.

Sales for the Big Four amounted to $43.8 billion, up 4 percent from last year's $41.9 billion and surpassing the previous best-ever quarterly total of $42.0 billion set in the second quarter of 1984.

However, with sales incentives including 8.8-percent retail financing offered by all four during the quarter—plus higher income taxes—combined net earnings for the Big Four were off 52 percent at $2.3 billion from last year's $4.8 billion, the industry's best-ever quarter.

Nevertheless, the first quarter of 1985, as expected, was the domestic industry's next-best showing for the period.

General Motors sales hit an all-time high of $24.2 billion, up 6 percent from $22.9 billion in 1984's first quarter. However, net income dropped 34 percent to $1.1 billion from last year's $1.6 billion.

GM blamed advanced engineering costs for new products and plants for the earnings decline.

Pre-tax earnings were also off 34 percent at $1.6 billion from last year's $2.5 billion. GM allotted $782 million in income taxes compared with last year's $1.1 billion. The auto maker's total costs and expenses were up 10 percent from the year-ago quarter.

Despite the earnings decline, the 1985 period was GM's second-best first quarter.

Ford Motor Co. had a 13-percent decline in net income at $783.3 million from last year's $897.2 million. Ford's best-ever quarter was the second quarter of 1984 with $909.1 million in net income, and the 1985 first quarter proved to be Ford's next-best showing for that three-month span.

Ford attributed the earnings decline to increased product development costs and higher taxes paid in the U.S. as well as overseas.

However, Ford's pre-tax earnings hit a new record of $1.3 billion, up 1 percent, or $18 million from the same quarter last year.

Ford's sales were up 2 percent at $13.2 billion, surpassing the former first-quarter record of $13.0 billion set last year. Ford's best-ever quarter was $14.1 billion in the second quarter last year.

Chrysler Corp., which rejoined the ranks of corporate taxpayers in the fourth quarter of 1984, saw profits drop 28 percent to $507.6 million from last year's record-setting first quarter of $705.8 million.

Chrysler entered 1985 with no more tax-loss carryforwards left from its years of no profits, requiring a tax provision for $217.5 million in the first quarter.

Nevertheless, Chrysler's pre-tax earnings were a record $725.1 million, up from $706.2 million a year ago.

Sales also set a quarterly record of $5.4 billion, up from $4.9 billion in last year's first quarter and surpassing the former record $5.3 billion in the fourth quarter of 1984.

Only American Motors showed a loss, the company's first since 1983. AMC lost $29 million in the first quarter of 1985, compared with a $5.1 million profit in last year's first quarter.

Sales were down 15 percent at $919.4 million from $1.1 billion.

AUTO MAKERS' FINANCIAL RESULTS
First Quarter
(In millions)

Company	1985 Sales	1985 Profit (Loss)	1984 Sales	1984 Profit (Loss)
American Motors	$919.4	($29.0)	$1,082.8	$5.1
Chrysler Corp.	$5,408.1	$507.6	$4,921.7	$705.8
Ford Motor	$13,246.2	$783.3	$13,008.9	$897.2
General Motors	$24,182.5	$1,071.7	$22,886.4	$3,221.1
TOTAL	$43,756.2	$2,333.6	$41,899.8	$4,829.2

Finding the right key

Finding the right key has never been a problem for conductor Mitch Miller, shown here accepting keys to a 1985 Merkur XR4TI from National Symphony Executive Director Henry Fogel. Miller won the use of the auto for one year by bidding $5,600 during the Symphony's fundraising Radiothon in Washington. Ford Motor Co. donated the Merkur, which is imported from Germany by Lincoln-Mercury.

His amendment threatens inspection retaliation

Japanese face a Dingell zinger

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Rep. John Dingell, Michigan Democrat, has sent yet another strong message to the Japanese, who this year have been on the receiving end of several other billets doux from Congress.

This zinger has not yet been put into legislative language. It would require the Japanese to allow U.S. cars (by the 1987 model year) to enter Japan with safety standards self-certified (as Japanese cars enter the American market) or face the threat that Americans might start the Japanese practice of individual inspection of Japanese vehicles.

The intent is "to play the game by the Japanese rule" if that is what is required, according to Dingell, the powerful chairman of the House Committee that authorizes money for NHTSA to carry out the 1966 vehicle safety law.

Dingell offered the amendment at hearings on a NHTSA funding bill to which other Committee members had already added several tough provisions.

The move by Dingell was totally unexpected although his views on "unfair" competition from the Japanese is well known.

Dingell (whose district now includes the Flat Rock plant, Mazda's new home away from home) has pending a "Made in America" bill to restrict the quantity of vehicles imported into the U.S. to no more than 15 percent of the total number of vehicles sold by all manufacturers in a base year.

The Secretary of Commerce would allocate that percentage among foreign makers according to their respective shares during the prior year. Since "foreign manufacturers" are defined as those selling at least 100,000 vehicles in the U.S. in prior years, it clearly applies only to the big Japanese companies.

Dingell's goal in this amendment is to ease the burden of the American companies trying to enter the Japanese car market, although he has no illusions about the size of the U.S. auto market in Japan.

He noted that several years ago, the U.S. pressed Japan to allow importers to "self-certify" vehicles for safety and noise regulations—the approach used here for those areas, but not for emissions-control standards.

The U.S. also asked Japan to eliminate individual inspections for each car before registration, a requirement which American importers say costs them half a day per vehicle in labor time.

But, Dingell added, Japan rejected those suggestions and instead, in 1983, offered concessions "designed to somewhat streamline the type designation approval system" in Japan. This has meant reducing the approval time to some 2½ months. In addition, Japan changed its durability requirements for safety and emission certification to allow supplying a document of compliance.

Dingell said that General Motors, through its distributor Yansas Motors, and Ford Motor Co. have now applied for certification of cars under this system. He said that on Dec. 20, 1984, GM became the first American maker to get approval with its certification of the Cadillac Fleetwood.

Dingell added: "No definitive

Suit on X-car brakes reaches final stages

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The end of the government's suit against General Motors over alleged rear-brake lockup on some 1.1 million 1980 X-cars is now is sight, although it is estimated that only 800,000 of the cars may still be on the road.

In the lawsuit, the Justice Department, on behalf of NHTSA, is seeking to force GM to recall and repair the cars. The 1980 X-cars were Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark.

A stipulation between the government and GM and a federal court order mean that no more witnesses will be called in the non-jury trial that has been proceeding, off and on, for 14 months —despite government efforts to speed up matters.

May 17 is the last open court date for briefing schedules and setting the time for oral argument. The record will be supplemented by depositions from one expert witness on brakes for each side and by some documents. The expert witnesses are Keith Brewer from NHTSA and William Gillespie from GM.

The stipulation detailed what is allowed and not allowed as evidence in the trial. GM said it has had "ample opportunity to explain the design and performance of the X-car brake system."

Still to be decided, however, is another charge made against GM by the government when the suit was filed in August, 1983. That is the allegation that GM made false statements to NHTSA in 27 instances when responding officially to queries posed by NHTSA. The government is seeking $4 million in damages on that count.

The safety agency actually started an engineering analysis of alleged rear-brake lockup on GM X-cars on Nov. 26, 1979, and it opened a formal investigation in July, 1981.

In December, 1982, NHTSA granted a petition from the Center for Auto Safety to broaden the investigation to include 1981-83 models. Before the current suit was brought, GM made two partial recalls of 1980 X-cars for brake problems but NHTSA has maintained that they were inadequate.

X-car dies after 6 years in GM family

DETROIT.—The General Motors X-car died last week.

On May 2, the final X-car was assembled at GM's Willow Run (Mich.) plant, ending its six-year life. Willow Run has been building the two survivors of the X-car line, the Chevrolet Citation and the Buick Skylark. The Oldsmobile Omega and Pontiac Phoenix were eliminated for the 1985 model year.

Willow Run will be retooled to build the full-size GM70 vehicles, the replacements for the B-bodies for 1986. Buick City (Flint) and Wentzville (Mo.) also will build those models.

The GM70 replaces the Buick LeSabre and Oldsmobile Delta 88 in 1986 and the Pontiac Parisienne for 1987. There are no plans currently for a Chevrolet nameplate in the GM70 line.

Big Lincoln Town Car to stay in the market

By Richard Johnson
Detroit Reporter

Ford Motor Co. will retain the platform of the hot-selling Lincoln Town Car through 1990, with a facelift for the luxury model set for mid-1987, according to Lewis Veraldi, vice president—large and luxury car engineering and planning.

But someday, Ford will likely build top-of-the-line luxury editions based on the Taurus/Sable platform debuting this fall.

In an interview with Automotive News, Veraldi said the company will still offer a car with Town Car-like dimensions at the end of the decade. With a wheelbase of 117.3 inches and overall length of 219 inches, the Town Car is among the largest sedans built in the world.

As for Ford's standard-sized Crown Victoria/Grand Marquis line, Veraldi said it will be replaced "just about never, if it keeps going well."

In an era of stable fuel prices, Town Car sales increased 52.4 percent last year, soaring to 90,869 in 1984 from 59,626 in 1983. Through March of this year, Town Car sales were running about 43 percent ahead of 1984.

Crown Victoria sales rose 41 percent last year, from 119,905 in 1983 to 169,253. Through March, Crown Victoria was running just below last year's pace. Grand Marquis sales jumped from 96,659 in 1983 to 143,594 last year, an increase of 49 percent. Sales through the first three months of 1985 were just shy of the 1984 level.

With Town Car sales booming, Veraldi said the company is standing fast by its luxury flagship.

"I can tell you our plans right now have that platform through

February little changed from January and last year

Month's registrations hold steady

By Jenny L. King
Detroit Reporter

February new-car registrations mirrored the slow pace of 1985 sales in the U.S., with numbers for the month up some 1,000 units

Table on Page 60.

from January and up one percent from the year-earlier total.

According to figures from R.L. Polk & Co., new-car registrations numbered 790,072 the second month of this calendar year, up 0.99 percent from 782,327 in February, 1984, and just 0.17 percent ahead of the 788,765 recorded in January.

The February import share edged up to 25.52 percent from 24.85 percent a year earlier, based on a numbers increase of 3.71 percent, to 201,587 from 194,381.

The comparable domestic figures were 588,485 this February compared with 587,946 a year earlier, an increase of 0.09 percent.

Chrysler Corp. made impressive gains in the overall market year to year and Ford Motor Co. also was up. Chrysler climbed 2.71 percentage points, to 12.04 percent from 9.33 percent. Ford was up 0.32 percentage points, to 19.28 percent from 18.96 percent.

General Motors suffered a loss of 3.35 percentage points, dropping to 41.66 percent from 45.01 percent. American Motors was down to 1.50 percent from 1.85 percent.

Intermediate-size cars surpassed imports by just over 1,000 units, laying claim to 25.67 percent of the February, 1985, market. Imports had 25.52 percent, followed by compacts at 17.56 percent, subcompacts at 13.40 percent, standards at 9.69 percent and luxury models at 8.16 percent.

The February, 1984, market-class breakout had intermediates at 26.49 percent, imports with 24.85 percent, compacts at 18.33 percent, subcompacts at 12.40 percen, standard-size cars with 10.12 percent and luxury models with 7.81 percent of the month's total.

• Excluding imports, the recent February market looked like this: Intermediates at 34.47 percent, compacts at 23.58 percent, subcompacts at 17.98 percent, standards at 13.01 percent and luxuries at 10.96 percent.

Comparable year-earlier figures were intermediates at 35.24 percent, compacts at 24.40 percent, subcompacts at 16.50 percent, standards at 13.46 percent and luxury models at 10.40 percent.

New-car registrations for the first two months of 1985 were up 3.22 percent from the year-ago level and maintained a 35.64 percent lead over 1983. Through February, 1985, the total was 1,578,837, compared with 1,529,558 in 1984 and 1,163,957 in 1983.

Domestics were up 2.52 percent year-to-date, to 1,168,910 from 1,140,230 last year. They had a 43.99-percent margin over the 811,820 domestics registered through February, 1983. Imports were up 5.29 percent, to 409,927 from 389,328. Their share of the market was up 0.51 percentage points, to 25.96 percent from 25.45 percent.

Chrysler's year-to-date share expanded by 2.27 percentage points, to 11.47 percent from 9.20 percent. Ford was up to 19.56 percent from 19.15 percent. GM lost 2.57 percentage points, dropping to 41.59 percent from 44.16 percent, while AMC slipped to 1.42 percent from 2.04 percent.

California lawmakers battle on belts, passive restraints

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—A battle is shaping up between the California Senate and Assembly over mandatory seat-belt-use legislation that would require auto makers to offer air bags or passive restraints beginning in 1989.

The Assembly has passed and sent to the Senate a bill sponsored by House Speaker Willie Brown, San Francisco Democrat, and backed by the insurance lobby that would require belt use by motorists and passive restraints from manufacturers.

The bill also contains a clause that would rescind the legislation if it results in California being counted toward the U.S. Transportation Department provision nullifying the passive-restraint requirement if two-thirds of the nation's population is covered by mandatory belt-use laws.

The California bill, which was passed by the Assembly 46 to 29, would fine motorists $20 for their first infraction and $50 for subsequent violations, and citations would be issued only if the driver was stoppped for some other violation.

Manufacturers would be fined $500 for each car sold after Sept. 1, 1989, that did not offer some form of passive restraints.

Brown has adopted the bill as his own personal political crusade and used his speaker's position to ramrod the bill through the lower house.

A somewhat similar bill that didn't go as far as the Brown measure was defeated in the Senate by a vote of 19 to 18.

Sponsored by Senator John Foran, San Francisco Democrat, it initially called only for mandatory belt use and had the support of the auto industry.

It was later amended to include a requirement for manufacturers to offer air bags as an option in response to the Assembly bill that breezed through that chamber. That move cost Foran industry support.

Foran is expected to try to reintroduce his bill, and the Senate Transportation Committee, which he heads, is also scheduled to discuss Brown's bill. The committee earlier rejected a bill that more closely resembled the Assembly proposal than Foran's.

While the bills are similar, Brown is pushing for mandatory rather than optional passive restraints which could be an obstacle to the Assembly and Senate reaching an accord. Even if both chambers were able to reach an agreement, Gov. George Deukmejian, who has said he would sign a mandatory belt-usage law, is opposed to one requiring air bags.

Go-fast present for moms on the go

BEVERLY HILLS, Calif.—For the mother who would rather drive a formula car than the family station wagon, Beverly Hills Motoring Accessories here has devised the ultimate Mother's Day gift: An $8,500 package that includes three days at the Jim Russell driving school in California and a trip for mom and a guest to Le Mans for the race.

Also included: Fireproof racing suit from boots to helmet, team jacket, luggage, Pierre Cardin driving gloves, sport sunglasses and Porsche Design watch.

Tips in car-owner manuals still useful after decades

DETROIT.—The MVMA, which is encouraging car owners to find and read their ownership manuals—especially before attempting any car maintenance or repair—says much of the advice in the manuals is the same as it was 80 years ago.

For instance, instructions for the 1907 Model C, built by Northern Motor Car Co. in Detroit, included the following advice, according to MVMA:

"Every neglect of machinery and tires carries its penalty of annoyance and expense.

"It is not a difficult matter to operate a motor car, but the real trick is to know what to do when it refuses to go.

"On rough roads, slowing down and using good judgment will result in lighter repair bills.

"Frequent inspection is essential to safety, and prompt replacements and adjustments are the truest economy."

The Model C's manual said, "There is no sensation akin to that of running an automobile with full realization that you know its parts and have mastered it. It is the only way to enter the real enchantment of motorland."

V.J. Adduci, MVMA president, said, "After a house, your automobile is your most serious investment. You know where everything in your kitchen is—know the utensils your car is carrying.

"Your car will take care of you, if you take care of it."

Anglo American opens auction in Fremont

FREMONT, Calif.—Anglo American Auto Auctions, Inc., has opened its 32-acre, full-service auction here.

The six-lane auction is surrounded by 30 acres of paved area, providing 500 dealer parking spaces and more than 2,000 vehicle sales spaces.

Flutie on Ford Ranger ad team

Hot sports property Doug Flutie has filmed a Ford Ranger TV commercial. Flutie, quarterback of the USFL New Jersey Generals, uses the truck to relive a much-heralded touchdown pass he hurled while a Boston College phenom last fall. The commercial was filmed in the Rutgers Stadium.

GM develops hand control to help disabled drivers

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—General Motors last week displayed a new hand-control device for physically disabled drivers that will be available as a dealer-installed option for some 1986 vehicles.

The device was developed by a disabled engineer at GM Advanced Product Engineering. Other engineers from Advanced Product Engineering and Saginaw Steering Gear Division also contributed to the control.

The unit will be marketed through Saginaw Steering Gear and manufactured by Euclid Industries, Bay City, Mich.

GM Vice Chairman Howard H. Kehrl said the control will be compatible with most full-size and mid-size GM cars and vans. He said it can be retrofitted to certain current model GM vehicles and is designed to be reusable. Saginaw Steering Gear is working to make it adaptable to all GM products.

Kehrl said the device should sell for about $300 installed and that it can be used with other GM equipment, including tilt-wheel.

Paul L. Ulrich, the GM engineer who developed the device, said it has a number of advantages for disabled drivers. The single hand control operates both the throttle and the brake. It is compact and attaches to either the right or left side of the steering column without the need for any major modifications to the vehicle.

The device does not interfere with the standard throttle and brake, he said, which permits the vehicle to be driven in a conventional manner. Also, the control will not impede steering column compression in the event of a frontal accident.

Ulrich said the device will be backed by GM warranties and that all GM dealers will be able to service the system. Ulrich said that many of the controls now on the market are available only by mail-order and that expert installation is often difficult to obtain.

Ulrich said the device has been thoroughly tested and that Veterans Administration approval is expected before it goes on sale. The VA has programs to pay for the installation of such systems needed by disabled veterans.

GM also plans to make the device available for evaluation by those who are interested in purchasing it, either through demonstrator vehicles or through the use of video presentations.

Margaret Heckler, Secretary of Health and Human Services, praised GM for offering the device.

The hand-control device is the first optional-equipment item introduced by Saginaw Steering Gear since the tilt steering wheel in 1962.

Separately, the American Automobile Assn. has published a book for the mobility-impaired called The Handicapped Driver's Mobility Guide.

The book is available from AAA and provides tips on the selection of mobility aids as well as a state-by-state listing of mobility-aid suppliers. Sources of additional information on mobility for the disabled are also listed.

Sawdon & Bess adds three Cadillac groups

NEW YORK.—Three more Cadillac dealer advertising groups, including the largest in the U.S., have selected Sawdon & Bess as their agency.

The three are San Diego, Northeast Indiana and Southern Cadillac Dealers Marketing Assns. The southern group, the largest anywhere, includes 88 dealers in Tennessee, Alabama, South Carolina and Georgia.

The three groups represent $2.5 to $3 million combined billings for 1985, the agency said. It currently handles Cadillac and Pontiac dealers in Los Angeles and Pontiac in San Diego. Seven agencies competed for the new Cadillac business.

Show biz

John H. Londoff, right, Johnny Londoff Chevrolet, St. Louis, presents a contribution from St. Louis automobile dealers to Sammy Davis Jr., star of the 1985 St. Louis Variety Club Telethon. Londoff was chairman of the 19-hour charity event.

Down 38 for first quarter

Domestic dealer total declines

Continued from Page 1

losses were pretty evenly divided in the first quarter. Six makes went up, five went down and three were unchanged. The gains and losses ranged from four to 11 outlets.

All three Chrysler Corp. makes added franchises—eight for Dodge, five for Chrysler and four for Plymouth. Mercury picked up 10 spots, Lincoln showed an increase of eight and Renault was up four.

There were declines of 11 franchises for Ford, 10 for Chevrolet, five for Buick, five for AMC and five for Volkswagen. Cadillac, Oldsmobile and Pontiac were unchanged for the period.

Chrysler Corp. had 3,989 car dealerships on April 1, one more than at the beginning of the year. In the first quarter of 1984, Chrysler added 30 locations.

Franchise totals on April 1 were Chrysler, 3,028; Plymouth, 2,984, and Dodge car, 2,901.

In addition to its 3,989 car dealers, Chrysler has five that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise total.

Ford Motor's 5,553 car outlets compared with 5,564 at the beginning of this year. Last year, Ford had a gain of seven in the January-March period.

Franchise counts on April 1 were: Ford car, 4,721; Mercury, 2,748, and Lincoln, 1,586.

Ford Motor has 116 dealerships that handle only Ford heavy-duty trucks. They are not included in the dealership total for the company or in the franchise total for Ford Division.

At GM, the latest figure of 9,945 car dealers is down 20 from 9,965 on Jan. 1. The drop was steeper than the decline of 10 spots in the first quarter of 1984.

Franchise totals on April 1 were: Chevrolet, 5,110; Oldsmobile, 3,200; Pontiac, 3,010; Buick, 2,970, and Cadillac, 1,610.

AMC-Renault held steady for the quarter with a change of only three dealerships. There were 1,462 as the quarter ended, compared with 1,465 at the beginning of 1985.

It was the second stable quarter in a row; the dip was three in the fourth quarter of 1984. In the first quarter last year, AMC-Renault was down 15 outlets.

Franchise totals on April 1 were AMC, 1,392; Renault, 1,345.

AMC-Renault dualing is little changed from the first of the year. Of the 1,462 dealerships, 1,275 handle both makes. AMC has 746 duals with Big Three cars, unchanged from Jan. 1, and Renault is still involved in about 90 percent of them. Another 68 outlets have AMC and Volkswagen, and about half of them include Renault.

Volkswagen opened the year with 899 dealers and had 894 on April 1. VW's experience was about the same as in the first quarter of 1984, when it had a decline of six outlets.

VW has about 150 duals with other makes of U.S. cars, unchanged from the beginning of 1985.

The total of 20,864 domestic-car dealerships in operation on April 1 was up 16 from the 20,848 counted a year earlier.

Chrysler Corp. and Ford Motor Co. were the big winners. Chrysler added 95 dealers and Ford added 38. There were dips of 85 for GM, 49 for AMC-Renault and six for VW. That's an agggregate decline of seven. A change in the number of intercorporate duals gave the industry a net gain of 16 outlets for the April-to-April period.

Ford Team Taurus concept is blueprint for future cars

Continued from Page 2

cally by either robots or hard automation.

"We also have modular assembly that is going on the frame," he said. "That's a separate line with about 14 or 15 automatic stations where different parts are put onto a cradle on the frame."

He also mentioned modular assembly of the doors, which are attached to the car in the body shop and undergo painting and corrosion protection applications with the body.

The doors, which are designed with pins so they can be removed easily, are then routed down their own modular line for trimming and wiring, while the rest of the car travels the trim line for interior work. At the end of the trim line, the doors are reunited with the body.

He said interior work is much easier without doors to contend with and this boosts productivity of assemblers.

Veraldi said Taurus was a clean-sheet project from top to bottom, allowing the car to escape possibly expensive patchwork later in life. While the Fiesta was done by Ford of Europe from a clean sheet, he said the car required costly preparations for the U.S. when the fuel crisis necessitated exportation of the subcompact to North America.

"On Taurus/Sable, part of the team was the legal and safety people," Veraldi said. "We met with them way up front and said this car is going to be here for a seven- or eight-year life cycle. We asked them to tell us what anticipated laws we should bake in. So, as a result, many things are built into the car without penalties because we did it going in."

The car could also be adapted to the European market, although he said there are currently no plans to export the vehicle.

"We went to the Ford world people and asked if they would be interested in it," he said. "We got all of their legal and safety requirements, so that if Europe did say next week or next month or next year they wanted that car, it would meet their requirements as well. We've designed the car for right-hand drive."

Word from Europe is that Taurus/Sable styling would be acceptable to European tastes.

"They've told us that," Veraldi said. "But right now, their flagship over there is the Granada, which is called the Scorpio now on the Continent. It's a smaller package than what we have, but it's big enough for them. If they ever want to get into the upper-class market, this would be available to them."

While Ford of Europe has reportedly shown some interest in the product, Veraldi said it isn't going to be exported any time soon.

Ford is planning to sell about 2.5 million Taurus and Sable models by the end of the decade, or about 500,000 a year. The cars are expected to be priced between $8,200 and $12,200.

AMC awaits compact car from Renault

Continued from Page 2

agreement can be reached with Matra.

Mowrey noted that AMC, long regarded as the U.S. industry's small-car company, won't necessarily stay in the subcompact segment.

"We're not welded to the subcompact market," he said. "If it becomes unprofitable, I'm sure the company would look hard at it. We're in subcompacts right now for two reasons—we wanted to get into the entry-level business in the U.S., and Renault had a very good product (Alliance and Encore) that we could put into production in the U.S. and become very successful."

However, Alliance/Encore sales have dipped in recent months as the subcompact segment in the U.S. has grown soft. Sales of the U.S.-built Renault twins are off about 35 percent for the year.

High court action may extend car's 'useful life'

Continued from Page 2

A GM spokesman expressed disappointment over the Supreme Court action because the "EPA ruling substantially expands the manufacturer's liability for emission recalls."

GM added it is "reviewing its options with respect to any alternatives that might be appropriate at this time."

It is not clear what alternatives are available to GM since a court has held against GM's "offset" proposals—that is, producing cars that exceed emissions standards in order to "offset" those that don't.

If GM has in mind a legislative remedy, that is not a likely happening this session of Congress, despite efforts by aftermarket associations to reduce the Clean Air warranty to two years or 24,000 miles to allow the use of independent repair shops and non-original-equipment replacement parts.

Defense fund established; New Jersey first target

FDA set to fight overdealering

Continued from Page 1

state Motor Vehicle Commission.

The hearing was being held last week at presstime.

But, Mullane said, "There is a flaw in the New Jersey law covering added points. It states that in such a hearing, the loser is subject to pay the winner's legal costs.

"While this is no hardship for the multibillion-dollar company, it is a great deterrent for dealers, and a number of possible contested actions have gone by the boards for this reason alone," Mullane said.

The East Orange issue is a particularly sore point for Mullane since the company did pull out of that city and Chevrolet also closed its dealership there.

To add fuel to the fire, Mullane said dealers in the North Bergen area have received letters from the company notifying them that Ford wants to open a point in that town —a company-owned store. But this particular issue does not involve Mullane's dealership directly. Mullane's dealership is in Bergenfield, N.J.

The five dealers who went further brought action against Ford before the Motor Vehicle Franchise Committee which was established under the New Jersey motor vehicle franchise law and is comprised of the director of motor vehicles, the secretary of commerce and the director of consumer affairs.

This committee has the power to appoint an adminstrative law judge to hear the case. This is the action that is being taken.

The issue was kept quiet because the dealers attempted to handle it "in-house," according to informed sources.

The dealers contend that East Orange is a "blighted area" and that they are really only three units below Chevrolet registrations in that city.

Apparently, this is the beginning of another battle that is to be waged by the FDA. Mullane said there are nine open points in the district and "we're all at risk. To let them put in the dealer without a murmur in one zone is virtually inviting them into all the others."

In an interview with Automotive News, Mullane acknowledged that he was occupied with the national issue of fleet subsidies, but overdealering has long been a cause with him, he said.

For years he has attacked manufacturers for establishing dealer points in close proximity to each other. He insists that dealers should have breathing room.

But he stressed that the risk under New Jersey law is legal fees and since the the loser is obligated, this, in effect, silences the dealers.

If this fund takes off as Mullane anticipates, it will be a first in the nation. Mullane made it clear he expects dealers in the district to donate $500 per year to maintain the fund.

Mullane further contends this issue is of national proportions. According to Mullane, Ford Motor Co.'s Ford and Lincoln-Mercury divisions added 139 franchises in 1984. However, the total car production of the divisions was less than in 1983. He maintained that while Ford was adding more dealers, it was building fewer cars for the dealers to sell.

Mullane said this issue has become "open warfare" since they (the manufacturer) want "dealers on every corner."

Armstrong acquisition

NEW HAVEN, Conn.—Armstrong Rubber Co. announced that Blackstone Corp. has become its wholly owned subsidiary. Blackstone, headquartered in Jamestown, N.Y., makes heat-transfer equipment for the automotive market.

New GM plant at Fairfax goes to CPC Group

Continued from Page 2

That GM-10 will replace the Buick Century and Regal, Oldsmobile Cutlass Ciera and Cutlass Supreme and Pontiac 6000 and Grand Prix.

The plant will be highly automated, resulting in more skilled labor and the loss of several hundred jobs. Retirements and other forms of attrition should eliminate layoffs, CPC said. There are 5,250 hourly workers at the current facility.

Plans for the new facility include a contiguous metal stamping plant, the newest material handling technology, greater manufacturing flexibility and product convertibility and more efficient use of energy.

The metal stamping plant will turn out all major exterior panels for the cars, including hoods, fenders, quarter panels, roofs and doors.

The paint shop will have robotic sealing and painting. The assembly line will be able to handle complex numbers of parts, options, combinations and build sequences.

The material control and handling facilities will use paperless shipping and receiving and "point-of-use" receiving, with no point farther away than 350 feet.

Fairfax II will be located on the Fairfax Airport property. GM has a 30-year lease with Kansas City for that land.

The new plant manager is Augustine M. (Gus) Beirne, who has been manager of the Framingham (Mass.) facility.

Other CPC assembly plants are in Arlington, Tex.; Bowling Green, Ky.; Doraville, Ga.; Framingham, Mass.; Lakewood, Ga.; Linden, N.J.; Norwood, O.; Oklahoma City; Oshawa, Ont.; Pontiac; Pontiac (Fiero); Ste.Therese, P.Q.; Tarrytown, N.Y.; Van Nuys, Calif., and Wilmington, Del.

The Buick-Oldsmobile-Cadillac Group is responsible for assembly operations at Flint; Detroit Fleetwood-Clark; Detroit/Hamtramck; Lansing; Janesville, Wis.; Leeds, Mo.; Lordstown, O.; Wentzville, Mo.; Orion, Mich., and Willow Run, Mich.

New technology is tool-show star

DETROIT.—A machine tool show called one of the largest by its sponsors is running this week at Cobo Hall here.

The emphasis is on new machinery and controls, and some 30,000 persons are expected to view the $34 million in manufacturing equipment being shown by 400 exhibitors. Many of the 1,000 machines are working on the show floor.

The International Tool & Manufacturing Engineering Conference and Exposition is sponsored by the Society of Manufacturing Engineers, which calls it new technology's showcase. There also are 35 workshops and technical sessions. They will cover topics ranging from artificial intelligence to advanced composites and the management of technological change.

5 days ahead of 1984

Year's output passes 3 million

By Louise Kerteaz
Detroit Reporter

U.S. makers built their three-millionth car of the year last Thursday (May 2), five days ahead of 1984.

So far this year, 3,052,599 cars have been assembled, 2.0 percent more than the 2,992,790 completed last year at this point.

Last week, the manufacturers scheduled assembly of 184,258 cars, 2.38 percent more than the previous week's 179,980 and 11.29 percent better than the year-ago week's 165,571.

The previous week's output fell some 8,000 units short of projection, mainly due to underbuilding at General Motors.

Companies shared last week's estimated production as follows: GM, 57.07 percent; Ford Motor Co., 20.63 percent; Chrysler Corp., 16.93 percent; American Motors, 1.98 percent; Honda of America Mfg. Co., 1.71 percent; Volkswagen of America, 1.09 percent; Nissan Motor Mfg. Co., U.S.A., 0.34 percent, and New United Motor Mfg. Co., 0.25 percent.

GM's Willow Run (Mich.) plant, which produced the X-car (Skylark, Citation), closed Thursday for conversion to the GM70 cars. The closing idles 5,000 workers.

The plant is scheduled to reopen Sept. 30.

GM auto plants working two overtime shifts Saturday (May 4) were: Framingham, Mass.; Oklahoma City; Leeds, Mo., and Lordstown, O.

Chrysler plants in Belvidere, Ill., and St. Louis (No. 1) were scheduled to work two overtime shifts Saturday.

Chrysler plants slated to operate two nine-hour daily shifts this week (May 6) are: Belvidere; Newark, Del., and St. Louis (Nos. 1 and 2).

Chrysler's Jefferson (Detroit) plant is scheduled to work two 8½-hour daily shifts this week.

Ford has scheduled daily overtime this week at its plants in Chicago; Lorain, O.; Dearborn; Edison, N.J.; Wayne, Mich., and Kansas City.

Overtime is slated at Ford's Lorain plant Saturday, May 11.

AMC's Kenosha plant is down this week for one week for inventory adjustment.

Lincoln drops turbodiesel; buyers just didn't want it

By Richard Johnson
Detroit Reporter

Ford Motor Co. is no longer offering a turbodiesel option on its Lincoln Continental and Mark VII models, according to Lewis C. Veraldi, vice president—large and luxury car engineering and planning.

In an interview with Automotive News, Veraldi said the 2.4-liter, BMW-built six-cylinder engine has been dropped because of a low rate of installations. The turbodiesel was introduced by the company just over a year ago.

Earlier this year, former Lincoln-Mercury General Manager Robert Rewey told Automotive News that the division would eventually stop offering the engine. He said at the time that no final decision had been made on whether to eliminate the option for the 1986 model year. But Veraldi said last week that the option has already been stricken from among Ford's engine offerings.

"There was no take," he said. "Nobody wants it. It's a good engine—from a noise-vibration point of view, it is probably one of the better diesels. But our customers told us they didn't want it, so we dropped it a couple of months ago. Why have all the complexity when we don't need it?"

He said Ford has no plans to discontinue the 2.0-liter four cylinder diesel, built by Mazda, that is offered as an option in the Ford Escort and Tempo and Mercury Lynx and Topaz.

By the time Ford introduced its turbodiesel in early 1984, diesel acceptance had withered badly in the U.S. market.

Installations have dropped precipitously in recent years as gasoline prices stabilized and oil burners were victimized by negative publicity stemming from alleged problems with a V-8 diesel built by Oldsmobile and installed in Olds, Cadillac, Chevrolet, Pontiac and Buick models from 1978 through 1981.

During the 1984 model year, 2,367 turbodiesels were ordered in Mark VIIs, or 7.1 percent of all Mark VII engine installations. The company reported that 1,371 turbodiesels were placed in Continentals, or 4.5 percent.

Ford originally agreed to buy 190,000 turbodiesel engines from BMW over a three-year period, but scaled the order back to 90,000 in 1983. According to BMW sources in Europe, Ford is committed to paying for a minimum number of engines no matter how many the U.S. auto maker decides to accept.

Hyundai promotes Gibbons

TORONTO.—Hyundai Auto Canada, Inc., has appointed Norman Gibbons senior vice president and chief operating officer. He was formerly vice president, sales and service.

Truck production dips 2 pct. from six-year high

Domestic truck makers scheduled a build of 71,405 units last week, down 2.11 percent from the previous week's 72,947, which was the highest weekly production since the week ended June 16, 1979, when 73,990 trucks were assembled.

The previous week's total marked the third consecutive week of the highest production levels since June, 1979.

Last week's truck output was 13.88 percent better than the year-ago week's 62,700.

General Motors plants working two overtime shifts Saturday (May 4) were: St. Louis, Pontiac (No. 5) and Lordstown, O.

GM's Detroit plant worked one shift Saturday.

Chrysler Corp. slated two nine-hour daily shifts this week (May 6) at its plant in Warren, Mich.

Ford Motor Co. scheduled daily overtime this week at the following plants: Lorain, O.; Wayne, Mich.; Kansas City; Norfolk; Twin Cities, and Louisville.

Saturday (May 11) overtime is scheduled at Ford's Twin Cities plant.

Canada builds 26,091 cars, a two-year high

Canadian car makers scheduled 26,091 units last week, 9.19 percent more than the previous week's 23,894 and the highest weekly production since the 27,994 units built during the week ended May 14, 1983.

Last week's output was 10.24 percent better than the year-ago week's 23,667.

Truck makers targeted a build of 18,921 units last week, about the same as (down 0.15 percent) the previous week's 18,892 but 3.47 percent more than the year-ago week's 18,287.

Year-to-date, 318,317 trucks have been built, 6.38 percent more than the 299,227 assembled last year at this time.

With the scheduling of 2,600 Plymouth Voyagers, 2,901 Dodge Caravans and 607 Mini Ram Vans, the T-115 build at Chrysler Corp.'s Windsor (Ont.) plant topped 100,000 last week, reaching 102,235.

GM ad shuffle cuts across divisional lines

By Verne Gay
Crain News Service

NEW YORK.—General Motors has reassigned network TV media buying for all of its divisions, making four agency of record assignments by daypart (time periods) that cut across the previously rigid divisional lines.

The new assignments affect the placement of about $250 million.

According to sources, Leo Burnett Co. now handles network prime time media for all GM divisions, while maintaining its creative assignment for Oldsmobile.

Network sources said GM divisions spend more money in prime time than any other daypart. Broadcast Advertisers Reports list 1984 GM spending as $114 million in prime time, $88.4 million in week-end sports, $25.3 million in news and $3.7 million in daytime. The prime-time figures, however, would include GM divisional buys on ABC's Monday Night Football, which is now part of the sports buy, and network prime-time news, such as ABC's 20/20.

D'Arcy MacManus Masius becomes agency of record for news. DMM continues as creative agency for Cadillac and Pontiac.

Campbell-Ewald is agency of record for sports and remains creative agency for Chevrolet.

N.W. Ayer handles the GM corporate public relations account, the smallest piece of the GM media pie. The corporate PR account, however, is charged with production of GM's network specials and miniseries.

Sources said GM has yet to make agency of record assignments for several other media, in-

Cadillac's secret

Barry Penfound

Early look at 1987 Pininfarina-bodied Allante

Unofficial snapshot of the 1987 two-seat, $30,000-plus Allante shows a Cadillac with styling cues from what the company expects will be its main competitor: Mercedes-Benz convertible. The Allante features a removable hardtop with the softtop underneath. Styled by Pininfarina, Allante bodies will be built in Italy and mated to the GM K-platform, also to be used for Eldorado, Seville, Toronado and Riviera.

Theft-marking rule could spell death for gray market

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The gray market in imported vehicles was dealt what could be its death blow by a newly proposed NHTSA vehicle theft standard.

In publishing the proposed standard, NHTSA said it has "tentatively determined that the purposes of the statute will be better served if only original manufacturers are authorized to certify compliance with the theft prevention standard."

If NHTSA sticks by this decision, it will effectively bar the importation of most vehicles not intended by the original manufacturer for U.S. distribution.

That is because many of the vehicles that insurers and law-enforcement agencies identify as having a high theft experience are the expensive luxury import types favored by the importer-converter.

The components that are to be marked are such integral parts that it would almost necessitate gray marketers rebuilding the automobiles.

The new NHTSA rules will apply only to vehicles that have a high rate of theft experience.

Although NHTSA has asked for comments on its proposed rule, it has justified its decision on the gray-market imports by saying that "limiting the legitimate possession of marking techniques to a few major manufacturers of vehicles and parts would mean that other persons in possession of such technologies can be more easily linked to their criminal enterprises."

Original manufacturers and law-enforcement witnesses have apparently convinced NHTSA that widespread access to the vehicle parts-marking process would weaken the overall theft standard by allowing Vehicle Identification Number substitution.

Original manufacturers and their franchised dealers have been battling with the direct importers for several years, principally through an EPA rulemaking still in progress. That rulemaking

One-third of cars fail tests in two years, EPA finds

Failure rate high on emission gear

By Jake Kelderman
Washington Reporter

WASHINGTON.—More than a decade after first requiring emission controls for new cars and light trucks, one-third of all those now produced by U.S. and foreign makers will fail to meet tailpipe standards within the first two years of operation, new studies by the EPA indicate.

As troubling as this failure is to the environmental agency, more troubling still is the fact that neither EPA nor the nation's auto makers know the precise reason.

In a report scheduled to be presented before the SAE meeting here the week of May 20, EPA will show that since the beginning of the 1981 model year, as many as one-third of all new passenger cars will fail to comply with hydrocarbon emission standards within the first 30,000 miles of operation

In addition, according to EPA, by the time they reach 50,000 miles they will be emitting as much as a third more hydrocarbon pollution than permitted (the standard is .41 grams per mile) in spite of being maintained properly.

EPA will also report that as many as two-thirds of all new cars fail to comply with evaporative emission standards and that as many as one third are emitting twice the permissible amount of this form of air pollution.

EPA will also report that as a whole, the percentage of cars in compliance with all of its tailpipe emission standards (hydrocarbons, carbon monoxide and oxides of nitrogen) dropped from approximately 65 percent in 1980 to just over 40 percent in 1982, the last year for which it has data.

The near 40 percent compliance rate is about the same as what the agency found for the 1977-78 model years but, in spite of emission standards having tightened since then, EPA officials are still surprised by the latest findings. They had anticipated that widespread use of sophisticated three-way-catalysts and electronic feedback emission control technology would make compliance easier.

"We're at a bit of a loss to explain this," said an EPA official who wished to remain anonymous.

In previous years, when failure to comply with the standards involved mostly NOx emissions, the difficulty was generally laid to a hardware problem, a part that could be repaired or replaced.

In the current situation, however, where excess HC emission are the problem "we just don't know yet," the EPA source said. Speculation is centered on deteriorating catalysts and/or oxygen sensors and possibly lead contamination of the catalyst from planned or inadvertent misfueling. Auto industry sources agreed with this assessment.

The cause for the excess emissions is of great importance to auto makers because they can be held liable for bringing their vehicles back into compliance.

EPA does not have to show the cause of the failure to order a recall of a group of cars but if, for example, the source of the current problem turns out to be a catalyst, or if a catalyst change at 30,000 miles turns out to be the only fix,

breaking news

8.5 pct. financing for Jeep Cherokee, Wagoneer

SOUTHFIELD, Mich.—American Motors has extended 8.5 percent retail financing to new Jeep Cherokee and Wagoneer models. The reduced rate will be available to qualified retail buyers from May 10 to June 10. The 8.5 percent financing also is available until May 31 to buyers of Renault Alliance, Encore, Fuego and Sportwagon models.

Class action OK'd in Park-Reverse case

WASHINGTON.—Federal Judge June Green has certified a class action brought on behalf of some 9 million owners of Ford vehicles with the alleged defect of unexpected slippage from Park-to-Reverse. Ford has reported it is facing some $1.6 billion in product liability claims for this problem.

Alfa Romeo to call new U.S. car Milano

MILAN, Italy.—Alfa Romeo, Inc., has chosen the name Milano for the sporty sedan it will launch in the U.S. in April. Milano is a 154-HP, V-6 version of the rear-drive 75 model which goes on sale in Italy next month.

Day' supply of cars lowest since November

By Kathleen Hamilton
Assistant Managing Editor

Inventories of new domestic cars dipped a bit during April as the sales pace quickened and production failed to keep pace.

May opened with a 52-day stock of cars, or 1,563,206 units, compared with month-earlier totals of 53 days and 1,572,998 units and year-earlier totals of 53 days and 1,541,985 units.

The days-supply figure—well within the ideal range—was the lowest since November, and the inventory count was the lowest since January.

General Motors, Volkswagen, Honda and, reporting for the first time, Nissan, increased their inventories compared with April 1, while American Motors, Chrysler Corp. and Ford Motor Co. trimmed theirs.

Incentives on compact-size cars at the Big Three trimmed supplies in that segment. The GM J-cars and Ford's Tempo and Topaz were all in short supply as the month opened.

The May 1 inventory was split this way: GM, 52.30 percent; Ford, 27.76 percent; Chrysler, 15.62 percent; AMC, 2.81 percent; VW, 0.98 percent; Honda, 0.45 percent, and Nissan, 0.08 percent.

One month earlier, the percentages were GM, 51.88; Ford, 28,14; Chrysler, 15.88; AMC, 3.03; VW, 0.97, and Honda, 0.10.

AMC shaved its inventory by a combination of increased sales and decreased production. Its Renault models were covered by low-interest incentives during April.

Chrysler's subcompacts remained in short supply, thanks to some help from incentive programs. The high numbers for its E-Class/New Yorker and Lancer are due to production increases during April.

By class segment, the May 1 breakout was: Subcompact, 19.15 percent; compact, 12.77 percent; intermediate, 18.09 percent; standard, 23.40 percent, and luxury, 26.59 percent.

One month earlier, the percentages were: Subcompact, 16.80; compact, 22.05; intermediate, 33.27; standard, 16.18, and luxury, 11.70.

The days' supplies of subcompact models: Lynx, 94; Encore, 93; Alliance, 89; Chevette, 80; EXP

Much-delayed sticker still faces a court test

Used-car rule goes into effect

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The FTC's used-car rule—currently being challenged in court by Consumers Union—went into effect last Thursday (May 9). The rule calls for a window sticker that lists certain facts about the car and conditions of sale.

The FTC staff first proposed a used-car rule in January, 1976, and a final rule was published in August, 1981. Under intense dealer lobbying, Congress vetoed the rule in May, 1982, but the U.S. Supreme Court ruled that veto illegal and the rule was remanded to FTC in September, 1983.

The revised final rule without the "known defect" provision was published in November, 1984, and became effective May 9. The court challenge mounted by Consumers Union is before the federal appellate court in the District of Columbia.

Despite the lengthy controversy and the elimination of the "known defect" provision over which NADA went to court, FTC officials called it a "happy day," marking the beginning of consumers knowing "up front and in writing" who will pay for repairs after the sale.

Meanwhile, NADA has been receiving some 60 calls a day from dealer members saying that printers have been working around the clock to produce labels. It appears that thousands of dealers will not meet FTC requirements since the printers used the wrong ink or not enough labels are available in Spanish.

In addition, NADA has a lot of questions that FTC has not yet answered. What happens with used cars sold on consignment? What is the status of not-yet-expired service contracts and/or extended warranties furnished by General Motors, Ford Motor Co., American Motors and a multitude of private companies such as General Warranty? Will dealers be allowed to add a second label?

From FTC's viewpoint, said Carol T. Crawford, director of FTC's Bureau of Consumer Protection, the window sticker means buyers have a legal contract spelling out the terms of warranty, if any. She said a major problem has been the consumer's inability to get the dealer to fulfill his spoken promises and the new rule takes care of that.

The window sticker describes the terms of any warranty and its duration as well as coverage and percentage of repair costs the dealer will pay.

The sticker indicates, in a prominent place, whether the sale is "as is" and if so, warns that the customer will pay for any repairs after sale. The sticker also warns that spoken promises are hard to enforce and suggests getting things in writing.

It also suggests that the consumer ask the dealer if he can get an inspection by an independent mechanic. The back of the sticker lists mechanical or safety systems on which major repair problems can occur and includes information about the availability of any service contracts.

Crawford urged consumers to report any used cars for sale without stickers as of May 9, although she added that if dealers were trying, FTC might not try to enforce the rule from day one. The fines are $10,000 per car per day and the enforcement is to be done by FTC's very limited enforcement staff—presumably letting some dealers act as examples.

FTC has printed and mailed 89,000 booklets to used-car dealers explaining the rule—at a cost of $7 million for printing and $19 million for postage. It has also printed and mailed a guide for consumers on the used-car rule and sent them to various consumer groups—at a total cost of some $17 million. The video press release for TV news media was $21 million.

Eventually, FTC will issue staff guidelines to help dealers.

Amanda B. Pedersen, deputy director, said the mailing to dealers was made April 23 to allow plenty of time to handle problems.

Crawford said that the stickers.

Peugeot 205 Turbo 16, Part Two

Peugeot's 205 Turbo 16 first participated in the World Rally Championship in April, 1984, and went on to give Peugeot Talbot Sport three wins from five entries that year. This year, the car will enter all World Championship Rallies. The 205 Turbo 16 Evolution 2, which will participate in the remainder of the rallies, weighs less than the first version and has more horsepower.

Concessions by May 24, or 2 plants will close

AMC sets a deadline for UAW

By Marjorie Sorge
Labor Editor

American Motors will close its Kenosha assembly and Milwaukee stamping plants in Wisconsin May 24 if the UAW does not agree to a concession contract.

The company gave the union the ultimatum in a recent letter which demanded a General Motors-type contract if the plants were to continue to operate.

It has been reported that union leaders in Wisconsin told the company they cannot meet the May 24 deadline. Local 72 in Kenosha has scheduled a membership vote on the issues for later this week.

At presstime, no talks had been scheduled between the company and the union, however UAW local officials from the two plants and from AMC's Toledo Jeep operation met at Solidarity House last week to discuss the situation.

The three-year GM-UAW contract has no paid personal holidays, staggered wage increases based on job classification in the first and lump-sum payments which act as wage increases in the last two years.

The demands in AMC's letter include shorter vacations, fewer days off and a 37-cent-an-hour wage cut for assembly workers. AMC is also demanding that union representation be reduced by as many as 200 people.

It has been reported that Kenosha has the highest number of full-time union stewards in the industry, one for every 23 employes. There are about 7,000 workers at the two plants. That costs AMC about 85 cents an hour compared with the 14 cents an hour its costs GM, the company said.

The current contract expires Sept. 16.

UAW and AMC spokesmen acknowledged the letter, but neither would confirm the details. However, the company spokesman said AMC is serious in its desire to get a GM-like contract for its Wisconsin operations.

AMC has been seeking concessions from the UAW for the past few months. In late April, the company told the UAW the Kenosha and Milwaukee plants would close within 15 months if the union did not agree to contract concessions. At that time, the company was hopeful that negotiations would begin early this month.

However, talks have not begun, and AMC officials are now very anxious to get negotiations under way.

The company maintains that Kenosha, which builds the subcompact Encore and Alliance, is the most expensive plant in the world. Wages there are about 70 cents an hour higher than those at Ford Motor Co. and GM, and the company says the high number of union stewards increases the labor cost even more. However, AMC refuses to disclose its hourly labor cost.

AMC lost $29 million in the first three months of this year and has said it will begin a 25 percent budget cut within the next few months. That will cause numerous white-collar layoffs and project eliminations.

The UAW and AMC have been at odds about the method of payback for the entire employe investment plan that was negotiated in 1982. Under that contract, the union agreed to invest between $110 million and $150 million to help the company create a new product program by banking some wages and benefits, worth about $10,000 for each employe.

Workers at both Wisconsin plants and those in the Jeep facility in Toledo agreed to the contract. So far, the company is not demanding a concessionary con-

Corvette design work farmed out overseas

By Dan McCosh
Detroit Reporter

Chevrolet will be contracting the majority of the design work on the next-generation 1990 Corvette to outside design and engineering company, Hawtal-Whiting Design Co., Ltd., the British engineering company currently doing a two-seat sports car for Buick, according to sources close to the program.

Hawtal-Whiting, a little-known company in the U.S., also reportedly is doing major design work on a station wagon version of the GM10 project.

Sourcing engineering work with outside companies has been growing at a rapid rate for domestic auto companies. Some GM insiders estimate they currently are doing as much as 60 percent of their engineering with outside firms, and will reach as high as 80 percent in the near future. The trend has created a boom in outside engineering firms in the Detroit area, and has been reaching overseas as well.

Although the Corvette project will be one of the highest-visibility cars done in conjunction with an outside engineering company, GM has relied heavily on Detroit-based Modern Engineering Service Co. and Entec, Inc., among others to do basic development work as well as prototype drafting. Offshore, the best-publicized project so far has been the 1987 Cadillac sports car with body built by Italy's Pininfarina, although Cadillac is already searching for foreign input on a second specialty car.

Ford Motor Co. and Chrysler Corp. likewise have been relying heavily on independent engineering services, with in-house operations developing basic concepts and outside houses doing development and detail work. Recently, Chrysler contracted with Creative Industries to do a significant amount of work on its advanced-concept Liberty project. Chrysler also is working with overseas companies, notably Lotus Group, to develop high performance engines, suspension and structural composites.

AMC plans to close 4 zones, 3 parts sites

By Richard Johnson
Detroit Reporter

Four zone sales offices will be closed and operations at three parts depots phased out as part of a move by American Motors to streamline its national field sales and service organizations.

AMC will shut down zone sales offices in Boston, Philadelphia, Pittsburgh and Kansas City by June 1. Operations will be consolidated in renamed "regional" offices located in New York, Detroit, Washington, Atlanta, Chicago, Dallas, Denver and Los Angeles.

AMC will phase out parts depots in Detroit; Overland Park, Kans., and Elmsford, N.Y., by about Sept. 1, leaving seven regional parts warehouses across the country and the national depot in Milwaukee.

Closing the zone sales offices will result in 72 salaried layoffs out of a nationwide field zone office staff of 560. A company spokesman said AMC is offering new positions through relocations to many of those employes.

Seven salaried employes at each of the three parts depots being phased out have been or will be offered different jobs. The company will consult with three unions involved about possible reassignments for approximately 50 hourly employes affected by the phaseout of parts depots.

According to Peter Guptill, AMC vice president, U.S. sales, the new organization "will provide our franchised dealer body with a more streamlined system of sales and service assistance."

Last month, AMC announced across-the-board department budget cuts of 25 percent. The reductions were announced just before the company reported a $29 million loss for the first three months of 1985.

World Expo canceled; Congress not affected

Plans for the 10th annual Automotive News World Congress continue unchanged although the 1985 Automotive News World Expo has been canceled.

The Automotive News World Congress will be held Aug. 25-28 at the Westin Hotel in Detroit's Renaissance Center.

The keynote address at the opening session will be delivered by Carl H. Hahn, chairman of Volkswagenwerk G. His title is The State of the Industry—An European View. It is expected that Hahn will draw on his wide international management experience.

Automotive News World Expo, in the years of its existence, served as a channel of communication between vehicle manufacturers and suppliers worldwide. However, needs of the industry have changed and, in sensitivity to those needs, the 1985 World Expo was canceled.

Dealer gets a lift

Paul D. Fusz, Paul Fusz Motors, Inc., holding balloons in a Jeep Grand Wagoneer, is congratulated by C. Bruce Liebich, American Motors' Kansas City zone manager, during the opening of Fusz' showroom in Ellisville, a St. Louis suburb. Also attending the premiere of the 2,000-square-foot showroom is David M. Wolenberg, zone sales promotion manager.

Domestics up 9 pct.; imports gain 14 pct.

April auto sales climb 10 pct.

By Jenny L. King
Detroit Reporter

As the spring selling season moved into its second month, the pace of domestic new-car sales quickened from the daily sales rate in March and imports added some 25,000 units to their year-ago total for an April increase of 14.30 percent.

Domestics finished April up 9.32 percent with a total 788,281 retail deliveries. A year earlier, the April domestic total was 721,091. Record for the month was 862,940, notched in 1973.

The April daily-selling rate averaged 30,319, up 5.11 percent from 28,844 a year ago and up 2.53 percent from the March daily rate of 29,574. There were 26 selling days this April versus 25 in 1984 and 26 in March of this year.

Import sales for the month totaled 199,241, up 14.30 percent from 174,311 the preceding year but down some 2,000 units from 201,341 in March, 1985. Imports increased their share of the April market to 20.18 percent from the 1984 level of 19.47 percent.

The industry total of 987,522 in April was up 10.18 percent from 895,402 last year.

Where the market was, April, 1985

	Total Sales	Pct. of Total
SUBCOMPACT	133,126	13.48%
COMPACT	218,131	22.09%
INTERMEDIATE	272,403	27.58%
STANDARD	95,325	9.65%
LUXURY	69,296	7.02%
IMPORT	199,241	20.18%
GRAND TOTAL	987,522	100.00%

Domestic new-car sales in the first four months of the current calendar year kept ahead of 1984 by 4.21 percent, climbing to 2,830,143 from 2,715,700. Imports were up 4.97 percent, to 801,218 from 763,277. The calendar-year industry total was up 4.38 percent, to 3,631,361 from 3,478,977.

Chrysler Corp. was unsurpassed in percent of sales increase by any of its now six rivals. Chrysler domestic new-car sales were up 29.56 percent in April, to 112,621 from 86,924.

Nissan became the seventh U.S. manufacturer on the Automotive News chart as its Tennessee-assembled Sentras entered the market for the first time. U.S.-made Sentra sales were 1,267 in April.

• Ford Motor Co. reported sales of 191,311 domestic cars for the month, up 16.61 percent from 164,055 last year. General Motors was up 3.37 percent, to 450,608 from 435,908. Honda was up 15.67 percent, to 14,067 from 12,161. Volkswagen slipped 7.50 percent, to 6,585 from 7,119, and American Motors continued its decline, down 20.79 percent, to 11,822 from 14,924.

GM's share of the April domestic market dropped more than three percentage points, to 57.16 percent from 60.45 percent. Ford was up to 24.27 percent from 22.75 percent. Chrysler ascended to 14.29 percent from 12.05 percent.

Honda earned 1.78 percent, up from 1.69 percent. AMC tumbled to 1.50 percent from 2.07 percent, VW had 0.84 percent compared with 0.99 percent a year earlier, and Nissan came up with 0.16 percent of the recent month's domestic total.

In the April domestic-makes breakout, Plymouth was up 37.99 percent, Chrysler was up 13.44

GM dealers top Canadian lines in sales per outlet

WILLOWDALE, Ont.—General Motors dealers sold more new cars per outlet—378—than any other dealers in Canada in 1984, according to figures compiled by the Federation of Automobile Dealer Assns. of Canada.

GM dealers were also first in 1983, with 340 new cars per outlet, the FADA said.

Other dealers' showings were: Chrysler, second, with 313 new cars per outlet in 1984 versus 275 in 1983 (third); Honda, third, 286 vs. 293 (second); Ford, fourth, 251 vs. 205 (fifth); Hyundai, fifth, 246; Toyota, sixth, 237 vs. 243 (fourth), and American Motors, seventh, 162 vs. 160 (seventh).

Other dealers placed as follows: Volkswagen of America, eighth, 150 vs. 121 (ninth); Nissan, ninth, 148 vs. 168 (sixth); Mazda, 10th, 147 vs. 150 (eighth); Volvo, 11th, 105 vs. 103 (10th); Subaru, 12th, 100 vs. 100 (11th), and Lada, 13th, 63 vs. 86 (12th).

The average Canadian dealer sold 263 new cars in 1984 (trucks not included), the FADA said. According to Automotive News figures, the average American dealer sold 420.

Top selling dealers per outlet in the U.S. market last year, according to Automotive News, were Honda, 610; Toyota, 515; Mitsubishi, 477; Nissan, 439, and Oldsmobile, 331.

Autos retained longer than at any time since post-WWII

U.S. car and truck median age rises

DETROIT.—Despite major increases in registrations of new cars and trucks in the U.S. during the period ended June 30, 1984, the median age of cars and trucks here was up over the previous year, according a report by R.L. Polk & Co.

The median age of the U.S. automobile population rose to 6.7 years in 1984, up from 6.5 years in the comparable 1983 period and 4.9 years in 1970, according to Polk.

(MVMA compilations based on Polk data show that the median age of passenger cars in use in the U.S. was 8.8 years in 1946 and 8 years in 1948. The median age has been rising steadily since 1967, according to MVMA.)

Polk said the median age of the U.S. truck population rose to 7.4 years in 1984, its highest since 1960. In 1983, the median age was 7.2 years, up from 6.8 in the comparable period of 1982, the Polk report said.

In 1975, the median age for trucks was 5.8 years, and in mid-1970, it was 5.9, according to Polk.

A combination of factors resulted in the increase in auto median age. Although new-car registrations in the U.S. during the period ended June 30, 1984, increased for the second consecutive year, at the same time more Americans were holding onto their older cars longer than at any time since 1950, Polk said.

Similarly, truck median age increased because owners were keeping their older trucks longer, according to Polk.

More than 9.73 million new cars were registered during the period ended June 30, 1984, up 1,395,700 over the comparable period in 1983.

At the same time, the number of cars aged 15 or more years increased 980,000 units to a record 8.9 million registered, the Polk report said.

The number of cars in this age group increased by 1.08 million during the previous year, Polk reported.

In the year ended last June 30, 6.7 million cars were not re-registered and are presumed scrapped.

In the comparable 1983 period, 6.2 million cars were scrapped. The record was set in 1978-79, when 9.3 million cars were scrapped.

Autos presumed scrapped in 1984 were 6.1 percent of the record national car population of 112 million, an increase of just 0.3 percent over the previous year.

In the period ended last June 30, 34 percent of the 40.14 million trucks in use in the U.S. were 10 years old or older (up 1.5 percent from 1983), whereas in 1979, just 26 percent of the registered trucks were that old, Polk said.

Scrappage of trucks in 1984 amounted to 1.6 million units, up slightly from the previous year but well below the record 1.9 million for 1978-79, Borthwick said.

The total number of registered cars in the U.S. for the period ended last June 30—112 million—was up 3.06 million or 2.8 percent from the previous year, according to Polk.

That increase was the greatest growth since 1977-78, but was well behind the average growth rate of 3.2 percent per year in the decade that ended in mid-1976, the report said.

The total number of registered trucks—40.14 million in 1984—was up two million over 1983.

Sure, You Believe Your Salespeople Could Sell Portable Heaters In The Jungle- BUT COULD THEY?

Wouldn't They Need Help Finding Prospects There?

Even a good salesperson needs prime prospects. That's what Invitational Promotions has been doing for the past 5 years—in impressive numbers!

We've done it for more than 2,000 dealers in the U.S. And they have sold over 1.5 billion dollars worth of new cars in our private auto sale promotions.

If you think our recent 3-day private auto sale promotion of 95 new cars for a dealer in Orange, California, was something, wait 'til you see what we can do for your dealership!

Imagine—no more "do you still need prospects." And using our creative experience and proven direct mail selection techniques, you'll get more sales.

After all, isn't that the name of the game? So what are you waiting for? Call Jean Sawyer in Sales!

1984 numbers for New York State and Oklahoma from manufacturers' sales records. Minnesota, Feb., 1985, temporarily delayed.

February total is 201,587

Import registrations up 3 pct.

By Jenny L. King
Detroit Reporter

The number of new imported cars registered in the U.S. in February climbed more than 7,000 units over the same month a year earlier and gained a fraction of a percentage point in share of the total market.

However, the imports' share was smaller than their 26.41-percent piece of the January, 1985, pie.

Figures provided by R.L. Polk & Co. show February registrations of 201,587 imported cars, up 3.71 percent from 194,381 a year ago.

The imports' market share climbed to 25.52 percent from 24.85 percent in 1984. In January, import registrations totaled 208,340 and accounted for 26.41 percent of the month's total.

Honda led the imports with registrations of 40,562 new cars in February, accounting for 20.12 percent of the import total. Honda figures reflect both imported models and the Accords assembled in this country.

Toyota found itself dislodged from first place as it missed its year-ago total by just over 100 cars and dropped 0.79 percentage points in penetration, to 19.01 percent from 19.80 percent.

Nissan maintained its hold on third place and gained 0.10 percentage points, growing to 18.16 percent from 18.06 percent.

BMW was the only other import to improve its share, up 0.26 percentage points, to 2.95 percent from 2.69 percent in 1984.

Mazda dropped 0.16 percentage points, Volkswagen (which includes U.S.-built and imported cars) slipped 0.68 percentage points, Subaru was down 0.55 percentage points, Volvo was down 0.22 percentage points, Mercedes-Benz was down 0.20 percentage points and Audi dropped 0.10 percentage points.

The top 10 imports claimed 88.38 percent of the total, down from 89.24 percent a year earlier.

For the first two months of the year, five makes gained in shares of the import market—two Japanese and three European. Honda was up 1.03 percentage points, edging Toyota from first place. Nissan was up 0.01 percentage points, Volvo was up 0.02 percentage points, BMW was up 0.19 percentage points and Audi gained 0.10 percentage points.

Toyota's two-month penetration was down 0.77 percentage points year to year. Mazda was down 0.13 percentage points, VW dropped 0.63 percentage points, Subaru was down 0.29 percentage points and Mercedes slipped 0.03 percentage points.

The top 10 imports accounted for 88.61 percent of the two-month total, down from 89.11 percent in 1984.

Japan's share of the February market slipped to 71.60 percent from 72.11 percent last year. West Germany was down to 13.17 percent from 13.26 percent and Sweden dipped to 5.12 percent from 5.35 percent. The "U.S. imports" (i.e., domestic Hondas and VWs) edged up to 8.24 percent from 7.10 percent a year earlier.

New-car registrations by country of origin were:

	Feb. 1985	Feb. 1984
Japan	144,336	140,174
W. Germany	26,541	25,779
United States	16,618	13,795
Sweden	10,329	10,408
France	1,881	2,498
Great Britain	1,419	1,366
Italy	463	323
Ireland	0	38
TOTAL	201,587	194,381

Japan's share slipped to 71.98 percent from 72.68 percent for the first two months of the year, while West Germany was up to 13.20 percent from 12.77 percent. The U.S. provided 7.84 percent, up from 7.29 percent, and Sweden climbed to 5.13 percent from 5.50 percent. Totals were as follows:

	2 Mos. 1985	2 Mos. 1984
Japan	295,060	282,951
W. Germany	54,123	49,735
United States	32,120	23,368
Sweden	21,031	19,646
France	3,889	5,124
Great Britain	2,869	2,831
Italy	835	591
Ireland	0	82
TOTAL	409,927	380,328

Imported-truck registrations continued their upward spiral, growing 30.12 percent February to February, to 74,319 from 57,114. Registrations by major makers were:

	Feb. 1985	Feb. 1984
Toyota	26,488	20,468
Nissan	23,736	17,704
Mazda	8,497	9,915
Dodge Ram 50	6,145	3,258
Others	9,451	5,769
TOTAL	74,319	57,114

Registrations of 145,039 new imported trucks in the first two months showed an increase of 36.96 percent from the 105,898 reported in 1984. The two-month figures were:

	2 Mos. 1985	2 Mos. 1984
Toyota	53,568	40,238
Nissan	44,389	29,200
Mazda	17,008	18,167
Dodge Ram 50	1,293	6,076
Others	18,783	12,217
TOTAL	145,039	105,898

Mahin named to head Subaru communications

PENNSAUKEN, N.J.—C.D. (Doug) Mahin has been named vice president, corporate communications for Subaru of America. He will supervise the advertising, public relations, promotions/special events, merchandising and market research departments.

Mahin formerly was vice president, Distributor Division and will retain responsibility for that division. John T. Coyle has been appointed assistant vice president, Distributor Division. He formerly was general manager of the Subaru Atlantic distributorship.

Houston deal moves

HOUSTON.—Westpoint Mitsubishi here has moved to the Northwest Freeway. Owner is Marty Campise.

MR. DEALER, WILL YOU SPEND 15 MINUTES OF YOUR VALUABLE TIME TO LEARN HOW TO ADD $40,000, $50,000, EVEN $100,000 TO YOUR BOTTOM LINE WITH NO CAPITAL INVESTMENT.

HERE'S HOW: BROADWAY EQUIPMENT COMPANY HAS PRODUCED A 15 MINUTE FILM THAT TELLS THE AUTO BUTLER SERVICE BUILDER STORY. SIMPLY FILL IN THE COUPON BELOW AND SEND IT TO: AUTO BUTLER, INC., 1110 WEST BROADWAY, MINNEAPOLIS, MN 55411.

AUTO BUTLER WILL SEND YOU THE FILM TO VIEW AT YOUR LEISURE IN THE PRIVACY OF YOUR OWN HOME OR OFFICE. (ALL YOU NEED IS A BETA OR VHS VIDEO PLAYER). WHEN THE FILM IS RETURNED, YOU'LL BE SENT A MINIATURE MR. AUTO BUTLER DOLL AS SHOWN IN THE PHOTO. A GREAT ATTENTION GETTER AND CONVERSATION PIECE FOR ANY OFFICE OR SHOWROOM FLOOR OR A GREAT GIFT FOR A SPECIAL DAUGHTER, SON OR GRANDCHILD. (COULD BE THE NEXT CABBAGE PATCH KID). A RETAIL VALUE OF OVER $50.00. BUT THE REAL KICKER COMES FROM DISCOVERING HOW YOUR DEALERSHIP CAN BENEFIT FROM THE AUTO BUTLER SERVICE BUILDER SYSTEM.

YOU HAVE NOTHING TO LOSE AND A WHOLE LOT TO GAIN BY SENDING THE COUPON BELOW. (THE FILM STARS SUPER CAR SALESMAN JACKIE COOPER).

__ Yes, I'm interested in viewing the Auto Butler film, to learn first hand how I can add big profits to my bottom line. I agree to return said film after I have used it.

PLEASE SEND BETA __ VHS __

And, Yes, send me the Auto Butler Doll as shown in the photo.

paign for its Olds dealer group clients in western Pennsylvania, eastern Ohio and the West Virginia panhandle area.

Dodge Open charity golf

The 22nd annual Dodge Open Chairty Golf Classic will be played at the Denville (N.J.) Rockaway River Country Club May 21-23.

The event is sponsored by Chrysler Corp. and the Dodge Dealers Assn. of New York, New Jersey and Connecticut.

This year's event will offer a record purse in excess of $75,000 with proceeds going to Denville's St. Clare's Hospital and the Shriners Hospitals for Crippled Children. The event already has raised more than $145,000 for those charities.

The Dodge Open traditionally opens the season for Tri-state PGA members.

On a similar note, Huntington (N.Y.) Sportique Motors, is sponsoring its eighth food drive in five years. The current event will be a May 19 footrace dubbed the third annual Sportique Peugeot Food for Friends Five Mile Classic.

Simply, the dealership asks for food contributions as part of the entry fee. The food, and a cash contribution, will be given to Frances Watkins and the Suffolk County Emergency Food Coordinator Program.

On the set with car show video

Co-hosts Bruce Penhall and Debra Sue Maffet share a chat about car prices while standing next to a 1953 Cadillac convertible on the set of The 1985 Home Auto Show. The production features video footage and voice-over descriptions of new domestic cars.

College grad incentives

GMAC is back with its college graduate purchase plan.

The 1985 version of the plan features a low 5 percent downpayment, no payments for 90 days and a "favorable" interest rate.

GMAC mailed a four-color brochure detailing the plan to 830,000 graduating seniors in the U.S.

The GMAC College Graduate Finance plan applies to purchase or lease of a new GM car or light-duty truck. Graduates can take advantage of the plan for a full year.

Ford of Canada has launched a similar plan, offering a $400 discount, no payments for up to four months and special financing terms to Canadian college graduates.

The Ford of Canada plan is effective from May 1 to July 31 and is modeled after a similar plan used by Ford in the U.S. last year.

Ford products covered in the program are Escort, Lynx, Mustang, Capri, Tempo, Topaz, Thunderbird, Cougar, Bronco II and Ranger pickup trucks.

Bateman Bryan picked

The Southern Ford Advertising Assn. has picked Bateman Bryan & Galles, Inc., to handle its $1.6 million account.

The agency said it is "preparing a heavy television blitz using four target-marketed spots" to accommodate the geographic differences of its 21-member client.

SFAA consists of all metropolitan Ford dealers in Louisiana, except New Orleans, with some members in neighboring Mississippi and Alabama.

System offered to track use of fleet vehicles

WEST HARTFORD, Conn.—The National Assn. of Fleet Administrators (NAFA) and Generated Solutions, Inc. (GENSOL), announced a joint development program to produce and market the Vehicle Use Analysis program.

This is personal computer software that will calculate, track and analyze personal and business use of fleet vehicles, GENSOL said.

The system will also calculate the personal use fringe benefit value of driver reimbursement plans, the company said.

According to Harry Dillman, GENSOL president, "This new program will be in full conformance with the IRS regulations on record-keeping requirements for personal use of vehicles and on taxation of fringe benefits which became effective on Jan. 1, 1985.

"The system is designed for monthly or quarterly reporting and will be able to maintain a four-year history of vehicle usage," Dillman said.

NAFA will make the software available to its members exclusively at a cost of $88, with discounts for bulk purchases of 10 or more copies, GENSOL said.

The program, which includes operating instructions, is designed to operate on an IBM or compatible personal computer. Versions for other personal computers will be available in a few months, Dillman said.

GENSOL plans to market the program to other than NAFA members, the company said.

A second program, Vehicle and Equipment Lease vs. Buy Analysis, will be available June 1, GENSOL said. Both programs will be demonstrated at the NAFA preconference seminar at the Boston Sheraton on June 1.

Safety suits listed in report to SEC

Chrysler unruffled by class actions

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—In a filing with the Securities and Exchange Commission, Chrysler Corp. said it is not concerned about a number of class actions pending against it in safety-related matters. Nevertheless, it said it reported them to protect itself against stockholder suits.

One class suit, not certified but filed in Cuyahoga, O., seeks not less than $20 million in compensatory damages and another $50 million in punitive damages.

The suit, filed in March, 1983, is on behalf of Ohio citizens who bought 1978 and 1979 Dodge Omnis and Plymouth Horizons with alleged defects involving oil leakage and oil burning in engine assemblies made and sold to Chrysler by Volkswagen.

In August, 1983, another class action, also not certified, was filed in Sacramento on behalf of some 300,000 persons who bought Dodge Omnis and Plymouth Horizons in 1978-80.This suit involved alleged defective valve seals in VW engines used by Chrysler.

(VW is involved in administrative hearings at the FTC over alleged excessive oil consumption on 1974-79 VW engines. The problem is attributed to deteriorated oil seals.)

Chrysler is equally upbeat about penalties for failure to meet light-truck fuel-economy standards "because of offsetting fuel-economy credits from prior years and projected credits from future years."

Chrysler's main litigation appears to be with the Equal Employment Opportunity Commission (EEOC), both in Federal District Courts in Michigan and Georgia, filed in July, 1981, and in August, 1983, respectively.

EEOC charged Chrysler with age discrimination in terminating certain salaried employes between the ages of 55 and 70 pursuant to a policy of special early retirement at corporate option. Relief sought includes reinstatement, back pay and liquidated damages and an injunction to stop such practices in the future.

In September, 1982, the court denied Chrysler's move for summary judgment and granted EEOC's request and ordered reinstatement of some 40 corporate option retirees and three other retirees who contested their "voluntary" retirement.

Chrysler appealed and in March, 1983, the appeals court denied and granted in part Chrysler's appeal. Meanwhile, the Federal District Court denied EEOC's motion for summary judgment and later denied Chrysler's similar move, which Chrysler appealed to the circuit court. The suit is now in discovery.

The August, 1983, EEOC, litigation in Georgia is similar but somewhat less complicated. Chrysler filed to dismiss on grounds that EEOC did not have authority to enforce the age discrimination law and to strike the jury demand.

In April, 1984, the federal court denied Chrysler's motion, and Chrysler appealed both rulings. In October, 1984, Chrysler withdrew its appeal concerning EEOC's authority. This suit is also in discovery.

Jaguar Cars names Duncan in engineering

LEONIA, N.J.—Jagar Cars, Inc., has named J. Keith Duncan U.S. manager of engineering, replacing David B. Scholes who has completed a two-year assignment in the U.S. and will return to Jaguar's headquarters in the U.K.

The position was established to provide a direct liaison with Jaguar engineering at the factory in England. On a rotating basis, a senior Jaguar engineer serves in the U.S. for at least nine months, after which he returns to the engineering group in England.

Chevrolet includes Sprint and Spectrum. Honda combines imports and domestics. Dodge includes Colt, Conquest, Vista. Plymouth includes Colt, Conquest,Vista. VWoA includes Audi, and Porsche through Aug. 31, 1984. Fiat includes Lancia. Porsche figures began Sept. 1, 1984. Nissan includes Sentras built in the U.S.

April auto sales show increase of 10 percent

Continued from Page 6

percent, Dodge was up 36.59 percent, Ford was up 18.75 percent, Mercury was up 14.60 percent and Lincoln was up 4.61 percent.

Chevrolet and Pontiac were the only GM makes to surpass year-ago sales, Chevrolet up 5.42 percent and Pontiac exploding 28.17 percent. Buick dropped 6.73 percent, Cadillac was down 16.14 percent and Oldsmobile was down 0.49 percent.

AMC Eagle sales were off 41.14 percent, Renault Alliance/Encore was down 18.67 percent, VW dropped 7.50 percent while Honda was up 15.67 percent. Nissan had no year-ago comparison figure.

The April import sales total included a 30.87-percent increase for Honda imports and a climb of 34.32 percent for Toyota. Nissan imports were down 5.59 percent, Mazda was off 9.99 percent and Subaru was up 19.97 percent.

BMW was up 1.05 percent for the month, Audi was down 5.16 percent, Jaguar was up 4.58 percent, Porsche dropped 13.28 percent, Saab was up 1.25 percent, VW tumbled 12.48 percent and Volvo missed its year-ago total by 8.89 percent.

Third-period domestic sales in April were up 1.48 percent, to 282,653 from 278,540. With eight selling days in the period both years, the daily rate likewise was up 1.48 percent, to 35,332 from 34,818. It was the second strongest selling rate of the calendar year, surpassed only by the 35,905 average racked up Feb. 21-28.

For the period, GM was down 0.64 percent and earned 57.71 percent of the market. Ford sales dropped 11.26 percent and claimed 20.03 percent of the total. Chrysler was up 28.81 percent for 15.52 percent of the market. AMC slipped 3.87 percent in numbers and held 1.91 percent of the market.

Colvin adds Olds

Jim R. Colvin signs an Oldsmobile dealer agreement for Jim Colvin Pontiac-Oldsmobile-GMC Truck, Inc., Sweetwater, Tex. Witnessing is Cleo E. Swartz, assistant manager of Oldsmobile's Dallas zone.

Auto workforce cut 46 pct. in Mexico since '81

MEXICO CITY.—The labor force in the Mexican auto industry has been cut by nearly half in the past four years, according to a study by Jose Othon Quiroz, researcher at Metropolitan University.

In 1981, the industry employed 66,080 workers at 11 assembly plants. In 1982 and 1983, the economic crisis and retooling in the industry resulted in the layoff of 17,405 workers or 26.34 percent of the peak employment level, Quiroz said.

In 1984, 13,000 more workers were layed off.

While all indicators point to an upswing in the industry this year and next, it will be difficult to restore the employment peak of four years ago, Quiroz said.

Nevertheless, productivity margins have improved, Quiroz reported.

In concentrating on increasing exports, the industry has the advantages of lower wages and proximity to the U.S., Quiroz said.

L.A. museum gets torch car

Craig Black, left, director of the Los Angeles Natural History Museum, receives the keys to one of the nine 1984 Buick Rivieras specially designed and engineered to accompany the 84-day cross-country Olympic Torch Run from Michael S. Hadden, assistant manager of Buick's Los Angeles zone. The car will be on permanent display at the museum.

Obituaries

William M. O'Brien, 67; retired Chrysler VP

William M. O'Brien, former Chrysler vice president for employe and industrial relations and top labor negotiator, died with his wife May 8 in an early-morning fire in their home in Grosse Pointe, Farms, Mich. He was 67.

Mr. O'Brien, who retired in 1980, joined Chrysler in 1958. He was elected a vice president in 1963 and sat across the bargaining table from the UAW in six national contract negotiations.

William M. O'Brien

UAW Vice President Marc Stepp, head of the union's Chrysler Department, said Mr. O'Brien was "very fair and honorable."

Mr. O'Brien, who went head-to-head with three former UAW presidents—the late Walter Reuther, Leonard Woodcock and Douglas Fraser—was well-liked and respected by company and union officials as well as by the reporters who covered the labor beat.

He received his A.B. and J.D. degrees from Loyola University. His professional career was varied. He played professional basketball for the old Chicago Bruins, was an FBI special agent and worked in Ford Motor Co.'s industrial relations department before joining Chrysler.

George H. Thatcher

SARASOTA, Fla.—George H. Thatcher, a retired auto dealer, died here April 22. Mr. Thatcher was a former partner in Jarvis Motor Sales (Ford) in Detroit as well as in Thatcher and McHugh (Packard). He retired in 1961.

EPA finds high failure rate for auto emission controls

Continued from Page 1

the cost can be substantial to a manufacturer.

Thus far, EPA has not decided whether to order a recall of the troublesome 1981-1982 models. "We're still trying to decide the cutoff point," said an EPA source. But when the order does come, the domestic makers will bear the brunt of it.

Deemer takes sales post with division of Bendix

BIRMINGHAM, Mich.—Jay C. Deemer, formerly with Rockwell International, has been appointed a general sales manager for the Bendix Chassis & Brake Components Division. He succeeds John J. D'haenens, who was promoted to director of product planning and program management for BCBCD in South Bend.

In his new position, Deemer will be responsible for passenger-car and light-truck foundation brakes and steering products for Volkswagen of America, American Motors, Chrysler Corp., General Motors and all North American Japanese automotive manufacturers.

EPA studies indicate, without naming names, that for the 1981 model year, the best HC compliance figure for a U.S. maker was 61 percent and the worst was 27 percent, while the Japanese and European makers ran from a low of 68 percent to a high of 95 percent.

When the compliance rate was 40 percent in the 1977-78 period, EPA ordered more than 8 million cars recalled. Recalls for the current HC problem will also run well into the millions.

Adding to EPA's woes in the emissions area are new findings by the agency that its efforts to control evaporative emissions from automobiles have largely proven to be a bust, with only about one-third of both the 1981 and 1982 models complying with its 2 grams per test requirement.

EPA researchers believe changes in the volatility of fuels may be partly at fault but that poor design is likely to be the main cause.

"We don't know what we're going to do about that one yet," EPA sources said.

Days' supply of cars lowest since November

Continued from Page 1

and Escort, 79 each; Pontiac 1000, 67; Golf, 61; Laser, 41; Daytona and Omni, 34 each; Charger, 33; Turismo, 29; Fiero and Horizon, 28 each; domestic Sentras, 25, and domestic Accords, 13.

There also were less than 3,000 Chevrolet Novas, the joint-venture car built by New United Motor Mfg., Inc., in stock but no sales yet, so there is no way to judge its days' supply.

The days' supplies of compacts: Eagle, 181; LeBaron, 85; Capri, 76; Camaro, 70; Aries, 50; Firebird, 50; Reliant, 44; Firenza, 34; Mustang, 34; Cimarron, 30; 2000 Sunbird, 28; Skyhawk, 24; Cavalier and Tempo, 21 each, and Topaz, 20.

Intermediates: Lancer, 114; E-Class and New Yorker, 106; LeBaron GTS, 81; Dodge 600, 80; Marquis, 76; Citation and Thunderbird, 73 each; Grand Prix, 72; Bonneville, 68; Calais, 66; Caravelle and LTD, 64 each; Regal, 63; Monte Carlo, 62; Cougar, 57; Celebrity, 42; Pontiac 6000, 40; Century, 38; Cutlass Supreme, 37; Skylark, 34; Cutlass Ciera, 31, and Grand Am, 17.

Standards: Grand Marquis, 79; Crown Victoria, 78; Chevrolet, 77; Diplomat and Parisienne, 63; Olds 88, 52; Plymouth, 51, and LeSabre, 43.

Luxury: Seville, 102; Fifth Avenue, 95; Mark VII, 93; Toronado, 91; Eldorado, 89; Continental, 83; Cadillac, 77; Olds 98, 72; Riviera, 71; Electra, 61; Lincoln, 53, and Corvette, 52.

NHTSA probes belt retractors on Escort, Lynx

WASHINGTON.—NHTSA has started an engineering analysis of rear seat belt retractors in 1982-84 Ford Escort/Lynx models.

The alleged problem could cause twisting and binding of the belts, but there is some evidence that instead of the potential of 1.1 million vehicles involved, the 1984 models may have a redesigned belt retractor and that would cut the number in half.

Ford has the matter under advisement. The Center for Auto Safety gave NHTSA an internal Ford document showing that Ford knew of the "twisting and binding" problem in November, 1983, and that it was a "consumer and warranty concern."

In a March 25 letter to Ford, the center said that the number of warranty claims dropped from 1,677 on the 1983 models to 129 on the 1984 models. The center said this was clearly a result of design change. CAS also cited consumer complaints of trouble in obtaining new belts.

CAFE issue splits industry; not all makers want cut

Continued from Page 4

bility suits, consumer action groups and FTC action, all involving complaints about the GM diesel engine, had more to do with its acceptance and continuation than "changed energy circumstances.")

It is true, however, that consumers did start to prefer gasoline engines over diesels even when they functioned well. Mercedes-Benz of North America, for example, had counted on higher sales of diesel models, and at one point 80 percent of its U.S. sales were diesels.

MBNA endorsed the rollback for 1986 and later models but said in its filing in the docket that if market projections for diesels had really occurred, it would not be having problems with CAFE compliance.

The other major impact described by MBNA concerned gray-market cars.

When NHTSA changed its rule to allow a flood of gray-market vehicles, MBNA, starting with 1984 models, began importing cars with larger, less-fuel-efficient engines. Those cars caused a further reduction in MBNA's CAFE by some two to three MPG.

MBNA argued that since NHTSA allowed this influx of gray-market Mercedes, NHTSA should recognize this and reduce CAFE to 26 MPG.

MBNA said its diesel-to-gasoline sales ratio has shifted from 79 percent diesel vehicles and 21 percent gasoline vehicles in 1982 to 41 percent diesel vehicles and 59 percent gasoline vehicles projected for 1985.

Volvo of America said it made engine and drivetrain improvements, introduced diesel-powered cars and reduced road loads to raise its CAFE from 21.0 MPG in the 1979 model year to its projected 1985 level of 26.4 MPG, which is 1.1 MPG short of the standard. Its best estimate for 1986 is 26.5 MPG.

Saab-Scania, also a limited-line maker, said its projections from the 1986 through 1990 model years show there is no year in which it can reasonably expect to meet 27.5 MPG.

The AIA filing on behalf of its member companies wants the rollback to 26 MPG because to do otherwise would restrict consumer choice and because there would be only a minimal effect on oil consumption.

The big players in the CAFE rollback petition at NHTSA—and, undoubtedly, the big ones at the Senate hearing tomorrow (May 14)—are GM and Ford, whose fines could run to hundreds of millions of dollars.

Both have filed numerous documents, much of which is confidential since future product plans are involved. Both have met with NHTSA officials. Both have been asked to explain why their earlier predictions of capability to meet 27.5 MPG were not met.

In addition, since both were formal petitioners, GM and Ford have been asked for specific data. This includes:

The impact, if any, of the Japanese VRA; the impact of a standard lower than 27.5 MPG but not as low as 26 MPG; description of any changes in product plans during the past three years to raise CAFE level and a quantified evaluation of the success or failure of those programs; full descriptions of marketing and pricing actions taken to tilt the market over the past three years to achieve CAFE compliance, and a quantitative analysis for the belief that a rollback is needed.

Month's total reaches 757,116

April car output highest since '78

By Louise Kertesz
Detroit Reporter

April's output of 757,116 cars by domestic auto makers was the highest total for the month since 1978 when 875,652 cars were assembled.

The April figure was 1.48 percent better than March's 746,090 and was up 12.63 percent from the year-ago month's 672,200.

The manufacturers planned to build 178,607 cars last week, 1.66 percent less than the previous week's 181,614 and 4.34 percent more than the year-ago week's 171,170.

Year-to-date, 3,228,572 cars have been assembled, 2.17 percent more than the 3,159,849 completed last year at this point.

Companies shared last week's scheduled production as follows: General Motors, 58.19 percent; Ford Motor Co., 21.27 percent; Chrysler Corp., 16.85 percent; Honda of America Mfg. Co., 1.76 percent; Volkswagen of America, 1.32 percent; Nissan Motor Mfg. Co., U.S.A., 0.36 percent, and New United Motor Mfg. Co., 0.25 percent.

Ford's Atlanta plant, which produced the Ford LTD and Mercury Marquis, closed Friday (May 10) for conversion to the new Taurus and Sable. The closing idles some 2,000 employes.

The AMC plant in Kenosha was idle last week for inventory adjustment.

General Motors scheduled two overtime shifts Saturday (May 11) at its plants in Detroit; Fairfax, Kans.; Lakewood, Ga.; Pontiac (G-Line); Wilmington, Del.; Janesville, Wis., and Lordstown, O.

Ford has scheduled daily overtime this week (May 13) at its plants in Chicago; Lorain, O.; Dearborn; Edison, N.J.; Wayne, Mich., and Kansas City.

Chrysler has slated two nine-hour daily shifts this week at its plants in Belvidere, Ill; Newark, Del., and St. Louis (Nos. 1 and 2).

Chrysler's Jefferson (Detroit) plant is scheduled to work two 8½-hour daily shifts this week.

Strikes in Sweden peril output at Volvo and Saab

STOCKHOLM.—With scattered strikes disturbing Swedish industry, this may be a critical week for maintaining production, both Volvo and Saab-Scania reported.

The strikes involve selected groups of state employes, such as certain air traffic controllers, customs officers and railway employes. Beginning May 2, this tended to paralyze airports, railroad freight and some harbors.

So far, Sweden's export industry managed to keep production and deliveries running by using outlets still open, but the week starting today (May 13) will be critical.

Saab and Volvo may run into trouble because the supply of imported German electronic equipment is running short. This includes fuel-injection equipment used for all cars destined for the U.S. market. Volvo also has a problem getting transmission parts from England.

Should the strike be prolonged, Volvo is prepared to build unfinished cars and stock them, as it did during the 1984 West German Metalworkers' strike.

Saab plans to increase production of carburetor-equipped cars.

In the long run, Volvo production could also be affected by railway transport problems. It could transport body panels from the Olofstrom press works in Southeast Sweden and assembled car bodies from Gothenburg to the Kalmar plant by road, but this would severely limit production.

Both Volvo and Saab have started shipping spare parts for the U.S. market via Oslo, Norway, by boat and air. Neither is having any shipping problem there, although speed and cost are hurt.

Export of cars also is still possible via shipping ports not blocked by the strike.

The strike involves a small extra wage compensation, more or less promised in a two-year, 1984 agreement but now frozen by the government as part of its inflation-fighting program.

Monthly estimates may contain error of one or two units due to rounding.

Truck production is highest since May week in '79

U.S. truck makers targeted production of 77,577 units last week, the best weekly output since the week ended May 19, 1979, when 81,851 trucks were assembled.

Last week's scheduled output was up 5.94 percent from the previous week's 73,229, which marked the fourth consecutive week of the highest production levels since June, 1979.

Last week's production was 19.84 percent better than the year-ago week's 64,732.

So far this year, 1,276,591 trucks have been built, 8.79 percent more than the 1,173,431 assembled last year at this point.

April production of 300,092 trucks was up 1.90 percent from March's 294,486, 14.91 percent better than the year-ago month's 261,162 and the highest April production since 1978, when 315,994 trucks were built.

General Motors scheduled two overtime shifts Saturday (May 11) at the following plants: Pontiac (No. 2, Line 5 and No. 5); Shreveport, La.; Flint (Nos. 1 and 2); Baltimore; Janesville, Wis., and Lordstown, O.

GM's Detroit plant worked one shift Saturday.

Ford Motor Co. scheduled daily overtime this week (May 13) at the following plants: Twin Cities; Wayne, Mich.; Kansas City; Norfolk; Lorain, O., and Louisville.

Chrysler Corp.'s Warren (Mich.) plant is scheduled to work two nine-hour daily shifts this week.

Week's output in Canada climbs to 26,417 cars

Targeting production of 26,417 cars last week, Canadian makers again planned their highest production since the week ended May 14, 1983, when 27,994 cars were built.

Last week's output was 10.[illegible]0 percent better than the previous week's 23,971, which fell some 2,000 units short of a targeted two-year high.

So far this year, 380,031 cars have been assembled, 10.43 percent less than the 424,304 built last year at this point.

April output of 95,563 cars was up 18.91 percent from March's 80,367 but was down a bit (1.50 percent) from last April's 97,020.

Scheduled production of 18,921 trucks last week was about the same (down 0.82 percent) as the previous week's 19,077 but was 15.39 percent better than the year-ago week's 16,398.

Year-to-date, 337,394 trucks have been assembled, 6.25 percent more than the 317,560 finished last year at this time.

April's build of 77,589 trucks—the best April production ever—was about even with (down 0.67 percent) March's 78,110 and was 10.24 percent better than last April's 70,381.

Chrysler's Windsor (Ont.) plant scheduled production of 2,586 Plymouth Voyagers, 2,916 Dodge Caravans and 606 Mini Ram Vans last week, bringing the T-115 total for the year to 108,391.

Inventory is 34 days; Japanese pinch eases

Imported-car supply highest in 2 years

By Kathleen Hamilton
Assistant Managing Editor

The shortage of Japanese cars abated a bit last month, and European car makers shipped more cars to the U.S. for the spring selling rush. The result: The May 1 stockpile of new imported cars hit a three-month high point and the 34-day supply was the highest in two years.

There were 262,444 new imported cars in port and dealer inventory on May 1, a considerable jump from the previous month's 221,179.

Import inventories had taken a nosedive in March, as Japanese makers cut shipments in order to stay within their quotas during the fiscal year that ended March 31. They began easing last month, but the Japanese makes were so riddled by shortages that their sales suffered, while the sales pace for European makes increased.

On May 1, 1984, there were 221,547 import cars in stock. One reason for the big year-to-year increase is the easing of quotas on Japanese cars this year.

May's 34-day supply isn't much to cheer about: Importers would prefer a 60- or 70-day supply to prevent shortages. But it's better than they have had since May 1, 1983, when there was a 40-day supply of cars. During the two years since then, import stocks have dipped as low as 23½ days (in September, 1984).

On April 1, there was a 29-day supply of imports. On May 1, 1984, the figure was 32. All of last month's figures have been revised to include only the estimated number of Honda imports. Figures published last month included both Honda's imports and its Ohio-built Accords. The company has since changed its accounting to break out the totals separately.

Another reason to hold off on the hurrahs over the 34-day supply is the fact that the daily selling rate for imported cars last month was the lowest since September. The selling rate no doubt will rise dramatically this month, as the Japanese continue to shore up their stocks. And as it goes up, the days-supply will plunge as it is hit by the mathematical double-whammy of reduced inventories divided by a larger sales-per-day figure.

Import-truck inventories stood at 90,286 units, a 32-day supply, as the month opened. One month earlier, there were 92,259 units, a 33-day supply. One year earlier, there were 82,378 units, a 44-day supply. The days-supply figures for trucks have hovered in the 30s since February. Nissan's Tennessee-built trucks are included in all totals.

This month's car-truck total for imports showed 352,730 units in stock, a 34-day supply, compared with 313,438 and 28 days a month earlier and 303,925, a 34-day supply, a year earlier.

Japanese makes had 49.22 percent of the import-car inventory

Chevy to get 'L' for 'X'

Barry Penlound

Due in 1987 model year

The 1987 L-body is slated to replace the Citation X-body in Chevrolet's lineup. Bumpers and aero headlights are as they will appear on the car; the grille may be changed. The L-body will share mechanical components with General Motors' N-cars: Buick Somerset Regal, Oldsmobile Calais and Pontiac Grand Am.

Kenosha may build new plant for AMC

Marjorie Sorge
Labor Editor

The City of Kenosha may be willing to build a new assembly plant for American Motors if the company guarantees future production in that city.

The city would lease the plant to AMC, a source said last week.

The current Kenosha plant is on lakefront property which the city would like to have for other uses. The facility is aging, with some portions built at the turn of the century. It currently builds the Renault Alliance and Encore.

If the City of Kenosha were to build a new plant for the company and a new, less-expensive contract can be reached between the UAW local there and the company, it is likely that some of AMC's major problems would be solved.

The company lost $29 million during the first three months of this year and must lower costs at Kenosha which AMC maintains is the most expensive auto plant in the world. It is currently trying to get a new labor agreement there and has said it will begin plant-closing procedures May 24 for the Kenosha assembly and Milwaukee stamping plants if the union does not commit to making concessions.

If the city builds that plant and then leases it back to the company, the cost would be substantially less than if AMC were to build a new plant on its own.

Such a move also would help the city, since if AMC closes the plant, there will be 5,800 people out of work.

However, continuation of AMC production in Kenosha hinges on a new labor agreement between the company and UAW Local 72.

Last week, the 5,800 members of Local 72 voted overwhelmingly to enter into negotiations rather than accept the company's demands for concessions outright.

The local sent a telegram to AMC last Friday asking for early talks, possibly beginning today (May 20), to "negotiate for a mutually satisfactory agreement" to replace the current contract which expires Sept. 16.

In the telegram, the local agreed to accept profit sharing for the payback for the complete payback of the Employe Investment Program (EIP); to negotiate a mutally satisfactory economic and work-rule agreement along the lines AMC outlined in a letter in early May, and to explore a letter of intent to guarantee new models for Kenosha.

That should be the commitment AMC is seeking.

Richard Calmes, AMC vice president, industrial relations, sent a letter to the union on May 3 asking for the concessions commitment. The local interpreted the letter as demanding the concessions without allowing the union

breaking news

Chrysler names P-car

ANAHEIM, Calif.—Chrysler Corp. will name its 1986 upscale subcompacts Plymouth Sundance and Dodge Shadow, shareholders at the annual meeting here were told. A turbocharged version will be available. Chrysler also showed a running prototype of its Liberty subcompact project.

Ford of Britain slips into red ink

LONDON.—Ford of Britain, for many years Ford Motor Co.'s cash cow, slipped into the red last year for the first time since 1971. The $17-million deficit followed four years of dwindling returns. Sales were a record $4.6 billion. The loss came despite interest payments of $90 million from loans to the parent company during Ford of Britain's boom years.

Administration witnesses have rough day

CAFE hearing lively, but indecisive

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—In a hearing before a Senate Energy subcommittee last week, the Reagan Administration got a black eye in the battle over whether to roll back the 1986 passenger-car CAFE standard.

Although the hearing was lively, no clear consensus emerged from the shots exchanged. No legislative proposals are on board in the Senate. No hearings have yet been scheduled in the House.

The next move is up to NHTSA. Administrator Diane Steed said she expects some response to the companies by early June.

Both Ford Motor Co. and General Motors—petitioning NHTSA for 26 MPG instead of 27.5 MPG for 1986 models and beyond—emerged with bruises. But so did Chrysler Corp., which is vigorously opposing any rollback as "unfair."

Strange bedfellows with Chrysler were Joan Claybrook, now head of Public Citizen and also the former NHTSA administrator who rolled back light-truck standards for Chrysler in 1982; the Center for Auto Safety and the Environmental Policy Institute. They came off relatively unscathed.

The Automobile Importers of America (AIA), also asking for a rollback on behalf of its European members, weathered the flack fairly well.

The AIA argued on behalf of limited-line European luxury makes. Ford and GM were protecting their flanks as full-line makers beset by customers wanting to buy full-sized vehicles, not as single-line or limited-line makers who had no cars to average.

But it was Administration witnesses that took direct hits.

GM facing shortage of V-6 engines

By Edward Lapham
Marketing Editor

The shift of consumer preference to mid-size cars with V-6 engines has caused a V-6 shortage at General Motors. The shortage threatens to undercut its marketing plans for at least another year.

The most crucial imbalance is in the "Buick" family of V-6s, currently offered in displacements of from 3.0 to 3.8 liters.

Those engines are used extensively in A-body and N-body models, currently among the best selling GM cars.

The four corporate sources are currently Tonawanda, N.Y.; Flint; Ramos Arizpe, Mexico. and St. Catharines, Ont.

"Current engine production was planned a few years ago, before the price of gasoline stabilized and the consumer expressed a preference for more performance," a GM spokesman told Automotive News last week.

"It is a temporary situation until more capacity becomes available."

The next major jump in V-6 output is not scheduled to come on stream for about 15 months, when the refitted V-8 diesel plant in Lansing begins building 2,400 units per day.

In a recent interview, Pontiac General Manager J. Michael Losh told Automotive News that "the majority of Grand Ams," Pontiac's N-body, are four-cylinder models, but "the A-car (6000) is 60-40 in favor" of the sixes.

"When you look at all our car lines, they're in relatively short supply," Losh said. "And, to a certain extent, that's true for everybody."

At the beginning of May, Pontiac Grand Am stocks were the lowest of the N-cars, with a 17-day supply. The Oldsmobile Calais and Buick Somerset Regal each had a 66-day supply.

The A-car stocks were tighter. The Oldsmobile Cutlass Ciera ha

NEWSPAPER

But McCurry says firm is ready; Chevy Nova a new problem

Import-leader Toyota faces major challenge

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Looking at a volume increase of only 11.9 percent under Japan's new Voluntary Restraint Agreement and the prospect of its two nearest competitors expanding U.S. production, Toyota's leadership position in the import market will face perhaps its biggest challenge in the firm's history over the next several years.

Robert B. McCurry, Toyota senior vice president, feels his company is ready to meet it head-on, although he is not happy with the limits placed on Toyota as the result of VRA.

"We're against VRA, period," he said. "We think it's wrong. I noticed the Chrysler numbers the day VRA was released, and they had a 75-day supply of Mitsubishis. I think they (Japan's Ministry of International Trade and Industry) should look at the people who turn around inventories and have one or two days' supply and should allocate accordingly.

The low percentage of increase "really doesn't do much for us," McCurry said. "What's 50,000 vehicles?"

As for the types of vehicles Toyota will chose to bring in, he said, "We'll do what the market demands. Obviously, if the market is more competitive, we would bring in more of our price-oriented vehicles."

That doesn't necessarily mean that Toyota will go head-to-head with Hyundai or Yugo.

"Our most popular cars are the Corolla and Camry," McCurry said. "Those two vehicles are in the heart of the market. Basic vehicles are the strongest, so we would try to increase those two vehicle lines."

As for the General Motors-Toyota joint-venture vehicle, which will be sold by Chevrolet as the Nova, McCurry said he views the product as just another competitor: "We're going to sell against them as a competitor, although I'm sure it's going to be a good competitor."

McCurry said he's not thrilled about the prospect of Chevrolet using the Toyota name in advertising and indicated that Chevrolet may be too low in its estimates of how many people the Toyota name will attract.

"I'm kind of surprised they're doing it," he said. "Looking at their side of it, Toyota is a fine name that has the best quality existing. Obviously, there's a lot of benefit to be written from that if the customer knows that the powertrain comes from Toyota. I would assume that's their reason for doing it.

"They say they get 10 percent more attention by using Toyota. I think they're very low with that 10 percent."

Although Toyota and GM are building cars for Chevrolet, Toyota has not announced plans for a U.S. plant of its own. McCurry would like to see an announcement, but he said it may not happen as soon as he would like it.

"I think you have to relate it to Toyota and their experience in the marketplace, their products and their engineering," he said. "Very seldom are they first, but when they come out, they ususallly come out with the best plan and the best product. They are doing a study (of U.S. assembly).

"Generally, when Toyota makes a decision, it's all wrapped up. There are no loose ends as to where and how and why."

McCurry said that if a plant is built in the U.S., he would like to see product that "would go to the heart of the market, which is Camry and Corolla."

A more immediate goal, however, is Toyota's drive to sell a million vehicles a year, including trucks.

"When we make our projections, we project cars and trucks combined," he said. "Our truck business has been very good. We did 260,000 trucks last year, and we're projecting that we'll go 280,000 this year. If we get 600,000 cars (under VRA), we'll sell 600,000 cars. We're approaching the magic figure, which we're shooting for—a million units. Once we get to a million, I'm sure we'll shoot for 1.2 million."

Toyota currently has 1,084 dealers in the U.S. and although a million units is within striking distance over the next several years, McCurry feels the comany can handle additional units without a major expansion of the dealer body.

"We have a vey strong dealer body," he said, adding that "the average dealer in Los Angeles sells around 2,000 vehicles (per year) right now. I think we can grow gradually and make a good impact on the market."

Whatever expansion is undertaken will be in new markets that have emerged because of population shifts. "In new areas, growth areas, we're doing a lot of examin-

New quota finds Nissan disappointed

By Matt DeLorenzo
Los Angeles Staff Writer

LOS ANGELES.—Although Nissan will be able to boost its car supply by an additional 55,000 due to Sentra production in Tennessee, the company is somewhat disappointed in its quota under Japan's Voluntary Restraint Agreement for the next year.

"We were disappointed to a degree because, based on the information we received, we and Toyota have received the lowest percentage increases of any of the major manufacturers and we have the largest dealer organization," said Chuck King, Nissan's senior vice preisdent, sales.

"We have an unofficial number and it's about a 12-percent increase, about 57,000 cars," King said, adding that Nissan also received 2,000 more units under Category II, which covers sport/utility vehicles. "Currently, we don't have anything that falls in that category, but perhaps by the end of the restraint we will, so we might be able to utilize that other 2,000."

Noting that captive imports distributed by Chrysler Corp. and General Motors were the big gainers under VRA, King said the balance of the importers received about a 15 percent increase overall, as opposed to the 24 percent increase in the total number.

"Maybe if that had been stated by MITI (Japan's Ministry of International Trade and Industry) in the first place, we wouldn't be seeing all this negative reaction, particularly out of Washington," King observed.

"President Reagan didn't call for any type of restraints, so the Japanese Government took it upon itself to limit the numbers for another year and got tremen-

Sprint for two sun lovers

Shown for the first time at the Los Angeles Auto Expo was a Chevrolet-sponsored design study of the Suzuki-built Sprint, but without its back seat and the usual hard top. Chevrolet dealers on the West Coast have been selling the coupe version of Sprint for a year. A Chevy spokesman said the conversion was made to test the convertible's viability and that no production plans exist.

Service Index notes increase of 7 pct.

Shop business rises for quarter

By Jack Walsh
Service Editor

First-quarter service and parts volume in the nation's new-car dealerships was up moderately over a year ago in spite of a decline in the rate of growth in the first three months of 1985.

Through March, according to the Automotive News Service Index, shop business was 7 percent higher than volume in the like period last year. In 1984, volume for the three months was up 19.8 percent from the previous year.

All indicators used in compiling the Service Index were higher than a year ago in the first three months, although the rate of growth was considerably slower in 1985.

Shop volume in March was up 4.7 percent over last year, compared with gains of 7.4 percent in February and 8.8 percent in January. A year ago, January service and parts business was 18.5 percent higher than the previous year, February was up 26.2 percent (the highest for any month in Index history) and March showed a boost of 15.3 percent.

Sales of All P&A	+3.2%	+4.8%

★—Survey by Automotive News shows that dealers' service and parts business in March, 1985, was 104.7 percent of business in March, 1984. Service business in the first three months of 1985 was 107 percent of business in the corresponding period in 1984.

Lower-priced Porsche due for U.S. in 1986

By John A. Russell
New York Staff Writer

NEW YORK.—In a move to offer an entry-level model in the U.S., Porsche Cars of North America will bring back the 924 in 1986 and it will be priced 10 percent lower than the 944.

The 944 now is priced at $21,440 with 5-speed transmission and $21,040 with automatic.

Porsche executives stressed that the 924 will be a true Porsche using the 944 running gear. When the 924 was last offered in this country several years ago, the complaint was that its mechanicals were basically Audi.

In an interview with Automotive News last week, PCNA President John A. Cook said the company needs an entry-level car and the 924, which will be designated the 924S, will fill this gap.

While Cook stated categorically the company will not market sedans but will "stick with what we know best," he revealed that the company intends to introduce a 911 Turbo Carerra for this market in November. Also slated for November introduction is the 944 Turbo which Cook promised will be competitively priced. Within a year, the company will be offering four models in the U.S. in several configurations.

There will be the 924S, followed by the 944 and 944 Turbo, then the 911 Turbo Carrera and finally the 928S. Cook said there was a strong possibility the company would also have a Carerra Cabriolet in the future.

The broadening of the model range is essential, Cook said, since the company is not selling to the old Porsche "buffs." Cook anticipates that as the model range broadens, so will the customer base.

In the model line today, Cook considers the 928S the "real sleeper." This 32-valve model with the improved five-speed transmission will "burn your socks off" Cook said and he termed it the "best-kept secret that exists." He is moving to change that with what he terms a reintroduction of the car.

In June, PCNA will implement a direct-mail campaign on the

Chrysler to import sunroof for C-cars

By Dan McCosh
Detroit Reporter

Chrysler Corp. is planning to install imported sunroofs on its 1987½ C-body cars, the replacements for the current rear-drive full-size M-bodies. An innovative process that takes about 50 seconds of assembly-line time will be used.

The sunroofs will be made in Holland by Inalfa-Hollandia, Inc., and shipped to the Chrysler assembly plant.

Inalfa-Hollandia is a Holland-based company that currently makes sunroofs for a variety of European cars. The Chrysler project is the first U.S. original-equipment contract for Inalfa-Hollandia and may be the first time sunroof kits have been imported from overseas for OE installation.

A subcontractor will modify and reinforce the actual roof panel from the unassembled car, supplied by Chrysler, and the pre-cut roof panels then will be shipped to the C-car assembly site, tentatively identified as Sterling Heights, Mich. At the plant the roof panels will be mated to the Inalfa-Hollandia sunroofs

On-line, the roof panel installation is expected to take about 50 seconds, with the prefabricated

Decline by GM is biggest factor

Sales drop 8 pct. for early May

By Jenny L. King
Detroit Reporter

Early-May new-car sales slipped some 20,000 units from their year-ago level, dampened by another soggy sales report from market leader General Motors.

Compared with the same period in recent years, though, the 217,732 total wasn't out of line. It was down 8.61 percent from 238,240 in 1984 while up 29.00 percent from 168,785 two years ago.

GM sales for the May 1-10 period were down 12.95 percent from a year earlier, dropping to 129,212 from 148,431. Ford Motor Co. slipped 2.97 percent, to sales of 52,919 from 54,537. Chrysler Corp. was the sole member of the Big Three to improve upon its year-ago standing, up 3.79 percent to 27,359 from 26,359.

Honda was up 2.43 percent, to 3,202 from 3,126. Volkswagen sales of 1,690 Golf passenger cars were down 2.71 percent from 1,737 Rabbits in 1984. American Motors reported estimated sales of 2,950, down 27.16 percent from 4,050. The Automotive News estimate for newcomer Nissan, based on its April sales, was 400 Sentras from Tennessee.

With the domestic market now divided into seven segments, the largest piece still belonged to GM, which had 59.34 percent, down from 62.30 percent a year earlier. Ford climbed to 24.30 percent from 22.89 percent, and Chrysler expanded to 12.57 percent from 11.07 percent.

AMC dropped to 1.35 percent from 1.70 percent; Honda had 1.47 percent compared with 1.31 percent; VW edged up to 0.78 percent from 0.73 percent, and Nissan had 0.19 percent of the most recent market.

There were more minuses than pluses in the domestic-make sales comparisons for the period. Plymouth was down 10.64 percent; Mercury slipped 13.22 percent, and Lincoln was down 10.22 percent.

Buick was down 13.19 percent; Cadillac slipped 9.96 percent, and Chevrolet was down 16.98 percent. Oldsmobile dropped 15.05 percent; AMC was down 20.00 percent; Renault slipped 28.17 percent, and VW was down 2.71 percent.

Gainers were Chrysler, up 19.30 percent; Dodge, up 3.09 percent; Ford, up 2.12 percent; Pontiac, up 0.06 percent, and Honda, up 2.43 percent.

With nine selling days both this year and last, the daily rates were 8.61 percent apart, down to 24,192 this year from 26,471 in 1984.

Buick test drive boosts California Somerset sales

LOS ANGELES.—A telemarketing program that invites prospects to test drive a Buick Somerset Regal for 24 hours was launched May 1 in Southern California and was responsible for 342 sales in 15 days.

Michael Hadden, assistant zone manager, said "the whole idea is to get them (prospects) into the car."

Radio, television and print ads invite people to take the car for 24 hours. By calling a special number, (800) 85-Buick, the prospect reaches an operator in Flint who determines the closest dealer and arranges for the test drive.

Hadden said Buick is supporting the program by making 700 additional identically equipped Somerset Regals available to 50 dealers in Los Angeles, Ventura and Orange counties. The cars, which list for $11,602, are equipped with automatic transmissions and appearance packages and are available in red, white or gray.

"Through May 15, we've had 583 calls, which have resulted in 379 test drives. There have been 342 sales," Hadden said.

The ads are scheduled to run through May 26 and the test drives through June 1. Following the test-drive program, tent sales at the dealerships will be held to sell the Somerset Regal demonstrators.

Volvo's score is best yet in 35-MPH crashes of '85s

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—In the latest NHTSA high-speed crashes of 1985 models, Volvo won the prize, and the Chevrolet Spectrum (made by Isuzu) showed the worst results of the five vehicles reported.

Using belted and instrumented dummies, the cars are crashed into a barrier at 35 MPH (5 MPH above the standard compliance test but equal to about one-third more in energy forces).

The head injury criteria (HIC) of 1000 means roughly that a person will survive and avoid the most serious injuries; a chest deceleration of 60 Gs is also roughly survivable. Only single crashes are used, and cars should be compared only by size classes.

Using those gauges, Volvo's performance with two models was the best for the driver of 1985 models tested so far, and its HIC figure of 262 for the passenger of one vehicle was the best recorded for any model.

Results for the Volvo DL four-door sedan were: 651 for driver HIC; 310 for passenger HIC. For Volvo's DL four-door wagon, driver HIC was 621 and passenger HIC was 262.

Results for chest Gs were equally spectacular: 36 for the driver and 25 for passenger for the sedan; 33 for the driver and 31 for the passenger for the wagon.

The Chevrolet Spectrum two-door hatchback recorded dummy HICs of 1559 and 960 for driver and passenger, respectively, and 51 and 56 Gs for driver and passenger chest deceleration.

Dummies in the Nissan Maxima recorded a driver HIC of 1041 and a passenger HIC of 1500. Chest deceleration was 63 Gs for the driver and 38 Gs for the passenger.

The Chevrolet S-10 Blazer two-door 4x4 recorded a driver HIC of 1036 and a passenger HIC of 1320. Chest deceleration was 62 Gs for the driver and 43 Gs for the passenger.

All vehicles met Standard 212 (windshield retention), Standard 219 (windshield intrusion) and Standard 301 (fuel system integrity)—comfortably assuring they would comply at the lower compliance speed of 30 MPH.

Chrysler Financial to team up with GE Credit

ANAHEIM, Calif.—A joint venture has been announced by Chrysler Financial Corp. and General Electric Credit Corp. to finance machinery, equipment and real estate used by third parties. It will be called CGE Associates.

CARB chairman resigns

SACRAMENTO.—Gordon Duffy, chairman of the California Air Resources Board and state secretary of environmental affairs, has resigned effective June 1. Jananne Sharpless, Duffy's chief deputy, has been named interim replacement. Duffy stepped down to take a lobbyist post with Paul Priolo, whose clients include American Honda.

Porsche to miss CAFE by 2 MPG

WASHINGTON.—In a late filing of its model CAFE estimates for the 1985 model year, Porsche said it expects 25.5 MPG. Since this is 2 MPG below the fuel-economy standard, Porsche could be subject to $2 million in penalties.

China plans auto extravaganza

SHANGHAI.—China, in line with a policy to expand foreign trade, plans a seven-day automotive exhibition and seminar July 3-9 in Shanghai. Exhibitors, in addition to displaying their products, will conduct seminars on products and technologies. The affair has been named Automotive China '85.

Alfa 75 to become 'Milano' for U.S.

Alfa Romeo will introduce its sedan, named simply 75, to Europe next month. The upmarket version, renamed Milano for the U.S., will go on sale stateside in April. The car is a derivative of the jointly developed Saab 9000 (to be sold in the U.S.) and Lancia Thema. Fiat also will have a version.

Alfa plans new products tailored for North America

By Richard Feast
European Editor

MILAN, Italy.—"Two years ago we were faced with a major decision about the U.S.—whether to stay in or get out," said Ernesto Vettore, president of U.S. importer Alfa Romeo, Inc.

Annual sales were down to little more than 2,000 and there were no new models in the offing to help turn around the outlook.

Alfa Romeo decided to stick with it, while pushing ahead with development of models tailored more specifically to North American demands.

The first of those new products, the Milano, will go on sale next April. It will be followed in 1987 by a larger sedan currently known as 164. After that there are prospects of new-generation sports cars styled by Pininfarina.

Joseph Cooley Jr., the U.S. sales and marketing director, said he foresees annual sales rising steadily to the region of 20,000 by the end of the decade. The major competitors are identified as Audi, BMW, Saab and Volvo.

The Milano takes its name from the Italian city where Alfa Romeo has its origins. It is based on the 75 sedan, which goes on sale Italy in June and in the rest of Europe in November.

While Europeans will be offered a wide variety of gasoline and diesel power units, North American customers will initially receive only the top model, powered by a 154-HP, 2.5-liter V-6 engine. A 3-liter version with 190 HP will be added a year later.

For North America, Milano will be more lavishly equipped and trimmed. One version will feature an interior treatment by a Milanese fashion designer, Trussardi. A ZF automatic will be an option, but standard equipment is likely to include items like anti-lock braking, limited-slip differential, air conditioning and electric window lifts.

Alfa Romeo officials hinted at a list price of below $20,000 for the Milano. For the 164—a front-drive car, unlike the rear-drive Milano—the expectation is a sticker price below $25,000.

The 164 is an Alfa Romeo derivative of the model jointly developed as the Saab 9000 and Lancia Thema. Fiat's version, known as Type 4, will be unveiled this fall.

While Alfa Romeo believes its future lies with refined and comfortable sporty cars, it will not abandon sports cars completely. It has some longer-range projects in this category, but they will be given priority only when the sedans are fully launched.

• Cooley said U.S. sales in the class of sedans like the Milano and 164 total about 600,000 units a year. The targets are the 76 million Americans born between 1946 and 1955. More specifically, they are the so-called yuppies: College-educated, upwardly mobile, high-income buyers.

The Milano is a four-door sedan weighing just under 2,560 pounds. It is a little more than 170 inches in length and sits on a wheelbase of almost 99 inches.

Alfa Romeo's U.S. sales target this year for its sport cars is 4,500, compared with 3,700 last year. For next year, it believes it can sell 10,000 units, split roughly 50/50 between sports cars and the Milano. If it does so, it will be an alltime high. Its previous best was in 1977, when it sold 6,700.

The Milano is powered by the V-6 developed for the unsuccessful large sedan known simply as 6, and subsequently used in the GTV. It is front mounted and drives the rear wheels via a transaxle. In usual Alfa Romeo fashion, it uses a DeDion rear axle.

Top speed is quoted at more than 130 MPH. Acceleration from rest to 60 MPH is accomplished in about 8.2 seconds.

Fuel consumption for the 75—from which Milano will be derived—on the European cycle is the equivalent of 34.6 MPG at 56 MPH; 26.1 MPG at 75 MPH, and 18.1 MPG on the urban section of the test. An average will be just under 25 MPG, according to official European standard statistics.

Makers, not dealers, liable for penalties

A paragraph in an article on the NHTSA fund-authorization bill on Page 71 of the May 13 issue of Automotive News indicated that dealers are liable for fines or jail terms for failure to disclose certain defects. They are not. The section should have read:

Under the proposal, dealers who have been informed of a safety recall for a vehicle or piece of equipment would have to remedy it—at manufacturer's expense—before selling or leasing the vehicle. Also under the proposal, manufacturers knowingly and wilfully failing to notify the government, purchasers or dealers of a safety-related defect are subject to criminal penalties including a fine of not more than $50,000 or a one-year jail term or both.

Automotive World News

Fiat hopes lightning strikes twice

Flying down to Rio for another Uno launch

By Richard Feast
European Editor

Fiat Auto likes what's happened with its little Uno hatchback. Soaring sales nearly thrust Fiat into new-car sales leadership in Europe last year.

The company is so pleased that it hopes a little of the magic will rub off on its new, sporty Uno Turbo model.

For starters, the company outdid itself in impressing the press. In introducing the original Uno, Fiat flew European auto journalists to sunny Florida in mid-winter.

Could Fiat top this? It not only could. It did.

Recently the Italian auto maker hauled a jumbo-jet load of European scribes to Rio de Janeiro. The timing just happened to coincide with the opening round of the Formula One auto racing world championship, the Brazilian Grand Prix.

Fiat's determination to return to grandiose car introductions of the pre-oil crisis era is at odds with the rest of Europe's auto industry. Fiat maintains these flamboyant affairs are cost effective, but very few others believe the idea will sweep the industry.

Europe's volume car-makers recognize their more straitened circumstances these days. When profit margins are tight, they fear a backlash from disgruntled shareholders.

But Uno has been such a runaway success that Fiat apparently fears nothing, including fear itself. The car accounts for about 45 percent of the company's European production, which belies the popular adage about no one making money on small cars. Fiat's 1984 financial report is due shortly, and the automobile division is expected to announce a profit nearly doubling 1983's $45 million.

The full-scale launch of Lancia Thema in June and debut of the Fiat Type 4 this fall — both of which will yield even bigger per-car profits — point toward further financial enrichment.

Vittorio Ghidella, managing director of Fiat Auto and architect of the turnaround, declares, "We are producing 2,450 Unos a day. We were going to produce 2,200, and we would have been happy with 2,000."

Ghidella refers to European output at Mirafiori and Rivalta. Now the Uno is being produced at Belo Horizonte, Brazil, as well. Launched there last September, it is being built at a rate of 5,000 a month, mainly for the domestic market.

Total Uno volume has reached one million units in little more than two years. It is the company's fastest first million.

This year Fiat will build 10,000 of the new Turbos, and plans to double that in 1986. The 125-mph speedster, just 144 inches long, is a worthy contender in what is referred to as the "hot hatch" car market.

The "hot hatch" was practically invented by Volkswagen with its Golf GTI. Every other self-respecting European company followed that path toward compact cars with good performance and superior handling and road holding.

Among the cognoscenti, the Peugeot 205 GTI now has been established as the benchmark "hot hatch." Its appeal is an example of how public perception of a company can be changed. Peugeot's image suddenly has switched from dowdy to devilish.

Fiat's Uno Turbo has a 1.3-liter four-cylinder engine. With turbo and intercooler, it produces 105 bhp. In a car weighing only 1,860 pounds, the result is good performance (zero to 62 mph in 8.3 seconds) and fuel economy (32 mpg average for three ECE measurements).

The Fiat Uno Turbo in Rio de Janeiro.

Happy days for Fiat Automoveis

First positive balance sheet in nine years

Fiat Automoveis will soon report its first positive financial report since the Brazilian company was established nine years ago.

Alberto Fava, executive vice president, predicts it will be a purely symbolic return on revenues of $850 million, but he maintains the breakthrough is significant.

When established, the enterprise was financed 57 percent by Fiat Auto in Italy and 43 percent by the state of Minas Gerais, Brazil, where the Belo Horizonte factory is located.

Two subsequent share issues have boosted Fiat's holding to 82 percent, and indications are Minas Gerais wants to sell its remaining holding. Fiat has first option, but so far has not confirmed it will buy the 18 percent.

Auto sales in Brazil for the year will amount to 700,000, of which Fiat will have 13 percent. Over the longer term, Brazil's auto makers are shooting for a million-unit national market — a point almost reached in 1980 with 945,000.

"This market deserves one million," maintains Fava, who hopes it will happen by year 2000.

Fiat is proud of its status as Brazil's No. 1 auto exporter. This year it will produce 80,000 cars (including kits) and 220,000 engines for export. This means Fiat is now producing more units than when Brazilian demand was at its peak in 1980.

Fava believes Brazil's export incentive scheme, known as Befiex, and good product quality at a low price are enough to offset the disadvantages of inflation running at 200 percent and more.

—Richard Feast

Advanced system for Fiat

Ferrari is completing advanced four-wheel-drive development systems for all Fiat group cars, according to the man who shares the roles of Ferrari chairman and Fiat Auto managing director.

Vittorio Ghidella says the projects are under direction of top Ferrari engineer Mauro Forghieri. But he will reveal no more details about techhnical aspects or introduction dates.

Speaking at the Uno Turbo launch in Brazil, Ghidella also confirmed that Fiat's 1.0-liter FIRE engine is the first of a line with standardized components. There will be a 700-cc three-cylinder, 750-cc three-cylinder, 1.0-liter four-cylinder (the one already shown) and 1.1-liter four-cylinder.

First application is in the new Lancia Y10. First Fiat Unos with FIRE power will appear this summer.

—Richard Feast

Uno is Europe's No. 1 seller

Volkswagen Golf is second to Italian marque

Fiat Auto's claim that its Uno was the top-selling car in Europe in 1984 is borne out by an Automotive News annual survey of national buying patterns.

Fiat estimates Uno attracted almost 484,000 new customers in 1984, about 1,500 more than the Volkwagen Golf. Fair enough.

But while Uno's power base was Italy, where nearly 70 percent were registered, Golf's appeal was more widespread. It was the best seller in three countries — West Germany, Switzerland and Austria — and second in five other national top 10 markets.

Yet the most consistent sellers, according to the survey of 14 national markets, were cars produced by American-owned companies. That exemplifies the effectiveness of a pan-European design and marketing approach that harbors fewer biases toward national considerations.

Three Ford models scored firsts: Escort in the UK, Sierra in Norway and Fiesta in Ireland. Moreover, Escort took second in all but two of the top 10 national rankings.

At rival Adam Opel, General Motors' European flag bearer, Kadett was No. 1 in the Netherlands and Belgium and recorded 10 places in the top 10 markets.

The biggest turnaround in 1984 occurred in France where the Peugeot 205 soared to the top past the country's perennial best seller, the Renault 5, which slumped to a distant second.

Another major change came in Belgium where Kadett deposed the 1983 winner, Escort.

The only first for a Japanese car was

Ford edges Fiat for European sales leadership

Only 13,000 sales separate top two makes as Renault slips out of contention

It was only tentative before. Now it is official. Ford was the No. 1 new-car retailer in Western Europe in 1984.

But the contest was even closer than in 1983 when Renault's nose-to-the-wire margin over Ford was about 17,000 units. In 1984 Ford's advantage over Fiat Auto was a scant 13,000 as Renault slipped out of contention.

As official statistics from national organizations filtered in, it became clear that they would confirm preliminary returns. The final figures show a market share of 12.8 percent for Ford and 12.7 percent for Fiat.

Rounding out Europe's top six sellers for 1984 are Volkswagen-Audi (12.1), Peugeot group (11.5), General Motors (11.3) and Renault (10.9).

Total demand in Western Europe last year fell nearly three percent to just below 10.12 million units. Four of the five largest markets recorded falls, leaving an overall decline in Europe of 309,000 units from 1983.

Early indications for first-quarter 1985 suggest the downward trend is continuing. Sales at the end of March were down 4.8 percent from a year earlier. The main difference this year is that Fiat Auto has moved into a comparatively healthy lead and GM is pressing Ford for second place.

Last year's achievement by Ford was noteworthy because it was the the first time the company has been the market leader. However, the intense competition did little for Ford financially, and the company has gone on record as saying it will not defend market share at the expense of profitability.

Nonetheless, in 1984 Ford made broad gains across Europe, most notably in West Germany, France and Spain, although it declined in the UK and Italy. Ford regained market leadership in the UK, Ireland and Norway, and was the leading importer in France. In sales volume, the UK was Ford's key last year, but its German, French, Spanish and Italian showings were very respectable.

Italy was Fiat's key market in 1984, even though it lost some share. Fiat made gains on a wide front across Europe, but relied on Italy for 70 percent of its European car business, making the company vulnerable should something unfortunate happen in its home market.

No other maker relies to such an extent on one market — not even VW-Audi in West Germany. VW-Audi lost some share there last year but still held onto

world news briefs

Leif Mellberg and his six-wheel station wagon.

Japanese thank West Germans

They gave Japan's European sales a boost in 1984

The share of Europe's new-car market captured by Japanese makes increased fractionally in 1984. Only happenings in West Germany kept the Japanese from showing a substantial decline.

A year ago, as German auto workers plunged their industry into a six-week strike, Japan was ready and waiting to supply German motorists with the new cars they could not obtain from their own manufacturers.

While the German market declined overall in 1984, sales of Japanese products increased, giving Japanese cars a combined market share for the year of more than 12 percent in Germany, up from 10.5 percent in 1983.

In contrast, Japanese market-penetration fell in practically every other European country, reflecting toughly competitive conditions as Europe's domestic companies scrapped aggressively for sales.

Besides Germany, there was a small gain for the Japanese in the UK and France; but both countries have unspoken quotas on Japanese makes. The Japanese lost penetration in Europe's free markets, including two to three percentage points in the Netherlands, Belgium, Finland, Ireland, Portugal and Greece. The drops were an even greater five points in Norway and eight in Greece.

By adding more than 31,000 units in Germany, Japanese makes ended 1984 with total Western European sales of more than 1.04 million and a market slice of 10.3 percent. The numbers were by no means evenly distributed, since there are restrictions on Japanese brands in Southern European countries including Italy, France, Spain and Portugal.

Finland, with nearly a 38 percent Japanese share, and Norway, almost 35 percent, were the main Japanese fanciers. Austria, Belgium, Denmark, Greece, the Netherlands, Ireland and Switzerland each gave 20 to 30 percent of 1984's business to Japanese companies.

West Germany was the top volume market for the Japanese in 1984 at 288,000 units. Next was the UK at nearly 198,000. Only other country to record six figures in Japanese registrations was the Netherlands with some 101,500. Belgium's 71,000 and Switzerland's 65,500 were next highest.

For all but one Japanese maker, West Germany was the single most important market. Mazda was the leading Japanese import there with nearly 65,500 registrations, as well as in Austria, Norway and Sweden. Mazda also was a close runnerup to Nissan in France.

The exception to West Germany top-market standing was Nissan's glittering showing in the UK, where it tallied more than 106,000 sales, further confirming the importance of Nissan and the UK to Japan's export machine. Nissan's UK importer accounted for every 10th Japanese car sold in all of Europe.

No other performance approached that. It represented nearly 40 percent of Nissan's European sales, even though Nissan was also the leading Japanese marque in Finland, France and the Netherlands. It indicates why Nissan is prepared to protect its European presence by building a factory in the UK.

Nissan's Western Europe sales total last year topped 278,000 compared to 222,000 for Toyota, whose most important national market was Germany (53,000), even though it was not the market leader there.

Toyota was the main Japanese make in Belgium, Denmark, Ireland, Portugal and Switzerland.

Mazda was third overall in Western Europe with just under 200,000.

— Richard Feast

Six-wheeler from Sweden

Saab customizing specialist Leif Mellberg, of Nykoping, has created this unusual six-wheeler from what had been a written-off Saab 900. The vehicle has a station wagon body nearly 24 inches longer than the standard car. Mellberg's previous creation was a Saab with gull wing doors known as Blue Spirit.

Kadett on course

Adam Opel has responded to rivals' carpings that the new Kadett got off to a slow start. The company reports first quarter sales up 15.5 percent. Opel and Vauxhall Motors in the UK sold 134,604 units in the first three months—a rate which, if continued, will put the Kadett/Astra firmly among Europe's bestsellers.

Who has most cars

France's CSCA estimates there were 539 cars for every 1,000 inhabitants in the U.S. at the beginning of 1984. Among other countries it lists 403 in West Germany, 388 in Switzerland, 380 in France, 360 in Sweden, 358 in Italy, 290 in the UK and 220 in Japan.

MAN says no

Suggestions that West German heavy vehicle producer MAN is to move into the orbit of GM's Truck and Bus Group have been scotched by MAN's head of vehicle sales, Dr Gunter Dietz.

Spen King retires

C. S. "Spen" King, most recently vice chairman of BL Technology, has retired. King joined Rover in 1945 and, following various changes of company ownership, was largely responsible for the development of all Rovers and Triumphs in the mid-'70s. Among them were the Spitfire, TR6, TR7, Dolomite Sprint, Rover 2000, Rover 3500 and Range Rover.

Hino engines for India

Reports from India suggest that Ashok Leyland, the country's No. 2 commercial vehicle maker, is to buy diesel engine technology from Hino.

Still slow in France

New car demand in France is still slow, despite last year's substantial sales drop. In the first quarter of this year registrations were down 1.8 percent at 438,709.

Fiat Uno

Continued from Page 35

Toyota Corolla in Denmark. Overall, Mazda models, particularly the 323, gained more places than any other Japanese marque. Nissan, which outsells other Japanese makers in Europe, had very few top 10 places, and Honda had none.

A reminder of Finland's close trade link with the Soviet Union was provided by Lada's first place there once again. Indeed, the Finns proved to be more consistent in their car-buying habits than other Europeans. Only one newcomer made it to Finland's chart last year, and the finishing order was similar to 1983.

Uno's 331,000 sales in home-country Italy accounted by far for the biggest single chunk of sales by any make in any European market. It was followed by Golf's 260,000 sales in West Germany, 172,000 each for Peugeot 205 in France and Kadett in Germany, and 155,000 each for Escort in the UK and Renault 5 in France.

In terms of market domination, nothing approached Uno's lock on Italy where it accounted for one of every five cars sold. Next best was 17 percent in Sweden by the Volvo 200 series, Golf's 11 percent in Germany and the 205's 10 percent in France.

— Richard Feast

Ford

Continued from Page 35

nearly 28 percent. Its other strengths were in France, UK, Italy and Belgium, where it is also a producer. It was market leader in Austria and Switzerland.

The Peugeot group (PSA) returned to French market leadership last year, and improved in its important markets of Spain, Belgium, Germany and Italy. But an overall sales decline in France and further erosion of its British share caused PSA to slip overall. But the feeling is PSA has bottomed out and, compared with its French rival Renault, appears to be in glowing health.

GM's main setback last year, after several years of rapid gain, was caused by the German metalworkers strike. Its Adam Opel operation was a direct strike target, and as a result of vehicle shortages went into reverse in its important domestic market.

But Adam Opel improved its UK share considerably and made important gains from fairly low bases in Italy and France. Much of this was attributable to the Spanish-built Corsa, a type car much in demand in Southern Europe.

Last year was the worst ever for Renault. It lost its leading position in Europe and suffered horrendous financial returns. It dropped from first place in France, its bedrock market, and saw its important representation in Spain and Italy dwindle. It also suffered share losses in the UK and Germany.

Overall, Renault had nearly 214,000 units wiped away in 1984 from the previous year. The general decline in France (by 260,000) was a big reason, although some Renault products began to look outdated.

Collapse of the French market was by far the most important national trend in Western Europe last year. Also declining, however, were the UK by 42,000 sales, Spain by 4,000 and Germany by 33,000.

The 56,000 sales gain in Italy, 40,000 in Austria and other national upswings were not enough to produce an overall improvement.

JAPAN'S NEW CAR SALES IN EUROPE — 1984

Clawing back

The Australian Tiger

Leyland Bus is fighting its way back into the Australian market with its Tiger bus and coach chassis. Since launch of Tiger in late 1983, sales in both the bus and coach sectors have topped 120 units in a market running at about 800 units a year.

In New Zealand, a much smaller market, Leyland registered 20 Tigers last year. It has a target of 100 units a year there — 80 percent of total annual sales.

Prior to the relaunch of Leyland Bus in both markets in late 1983, sales were running at virtually single figures. In both markets there has been a ready acceptance to the three-axle Tiger for long distance services and touring, especially in New Zealand.

Developed specifically for the Antipodes, the three-axle Tiger has the same high-power TL11H 245 engine and hydracylic gearbox as Tigers sold in the UK.

Air suspension is standard with the third axle using the same axles and hub assemblies as on the front. The axle does not steer and has its own wide-based air bellows, with the axle secured by long leading arms.

Air suspension is standard all around on the three-axle Tiger by Leyland Bus for the Australian market. Since its launch in late 1983, sales topped 120 units.

Joins air freight for growing volume

'Endless' sea bridge for Saab parts

ORANGE, Conn.—With parts sales jumping 31 percent in 1984 and another 35 to 40 percent increase expected this year, Saab Scania of America has been forced to implement new parts shipment methods to augment its "air bridge" system to keep up with the demand.

While 70 to 75 percent of its parts continue to be shipped by air, said William Murray, parts and accessories manager of Saab, an overlapping sea freight shipment system has been developed using "fix load" containers with the same 23 parts numbers transported every week.

But this is only the begining as the company is developing a new line of accessories including air dams and suspension kits to appeal to U.S. sport buyers.

Murray said the development of the sport/handling kits were a response to the market in Europe where the "aero" look is "sweeping" the continent and he believes the trend will move across the ocean.

There have been several other new wrinkles in the parts programs at Saab. For example, every Saab dealer now is also a Michelin and Pirelli tire dealer for the sizes of tires used on Saab. Murray said this arrangement was made to service customers who may not have these tire outlets in their locale. And business has been good for the dealers with 3,000 to 4,000 tires being moved per month between the two brands.

Along the same line, Saab made the move to get into pre-mounted snow tires. This has been a big seller, according to Murray. The company offered snow tires, premounted on steel wheels without hub caps, for $108 retail. Saab started out with 2,000 tires among its 300 plus dealers but within three months the dealers sold 9,000 tires.

With these new areas of business, expanding the lines of shipping parts became a necessity. The air carrier, Lufthansa, has only a certain number of aircraft which can be used on this air bridge system. So Saab decided to use sea freight for slower moving parts. Every week, the same 23 parts numbers are loaded in the same quantity in special boxes for ease in unloading the container. The container is delivered to the harbor just before the ship leaves.

The system also means the company can reduce what Murray referred to as the "safety net" of parts stocks since it now has an endless chain of parts in transit.

The system will be expanded, he said. The goal is to have around 300 parts numbers in this chain.

WILLIAMS MOTOR WORKS

A COMMITMENT TO EXCELLENCE

Williams Motor Works delivers quality and excellence in Cadillac & Lincoln limousines. Precision engineering, quality craftsmanship and special attention to detail are hallmarks of every Williams' coach manufactured. We are a Southern California builder and welcome your inspection of our fine product.

DELAWARE VALLEY'S PHILADELPHIA '86 AUTO SHOW™

January 4 — 12, 1986
Philadelphia Civic Center
Philadelphia, Pennsylvania

Be A Part of One of the Largest Auto Shows in the Country

The Auto Show returns to the Philadelphia Civic Center in 1986 for the 50th Anniversary Edition sponsored by the Automobile Trade Association of Greater Philadelphia. To accommodate the growing number of requests for exhibit space, the Show has been expanded to include a fourth exhibition hall. With this addition, total floor space is now over 250,000 square feet.

Entertainment has also been expanded to feature top stars and attractions every day of the 1986 Show. Limited space is available. Contact: 1986 Philadelphia Auto Show, c/o Liberty Productions, Inc., P.O. Box 4097, Harrisburg, PA 17111. Telephone (717) 657-1310.

American Warranty sued by ex-associate in Florida

By Richard Johnson
Detroit Reporter

A Florida marketer of auto warranty contracts has filed suit against an Illinois-based insurance company and affiliates, charging the firm with illegally attempting to take over its network of agents and sub-agent dealers in the state.

Southeast Gulf Atlantic Corp., Fort Lauderdale, has filed suit in both U.S. District and Florida state courts, naming American Warranty Corp. of Florida and California, and United Equitable Insurance Co. and United Equitable Corp., both of Lincolnwood, Ill., as defendants.

A spokesman for the plaintiff said the suits will be amended soon to seek $5 million in compensatory damages and $5 million in punitive damages.

Southeast Gulf Atlantic contracted with American Warranty Corp. of Florida in 1981, becoming the exclusive general agent in Florida to sell motor-vehicle warranty service programs offered by the defendants.

Southeast said it assembled its agency network over 10 years, and it claimed that American Warranty is "maliciously interfering" with that relationship.

The suits charge that American Warranty delivered termination notices to Southeast's seven agents and approximately 250 sub-agent dealers without notifying the plaintiff of termination, and that American Warranty also made personal contacts as part of an effort to "create a direct relationship between the plaintiff's agents and sub-agent dealers and defendants."

The defendants' attorney, David Wells, denied that his client illegally interfered in dealings between Southeast and its agents. He said the agreement with Southeast was properly terminated pursuant with the contract.

Wells, who noted that injunctions sought by the plaintiff in both cases have been denied, said his client sent notice of termination to Southeast on March 11, and that termination was effective 30 days later. He said the defendants are now in the process of submitting answers to the complaints and filing counterclaims.

U.S. quotas listed for Japanese auto makers

Following are the Japanese car-export-allocation figures published in the Japan Economic Journal. They are presumed to be the actual figures for the year beginning April 1, 1985.

	Year Beginning April 1, 1985	April 1, 1984
Toyota	617,000	551,792
Nissan	545,000	487,040
Honda	425,000	372,338
Mazda	226,000	173,468
Mitsubishi	208,000	122,612
Isuzu	120,000	49,500
Subaru	106,000	76,250
Suzuki	53,000	17,000
TOTALS	2,300,000	1,850,000

UNI-WHEEL COVERS

The ingenious aluminum look for less than the cost of one wheel. Will not rust or require hours of polishing. ABS plastic impact resistant. 13", 14", or 15" gold or silver finish, they look great.

NHTSA alters lighting rules for technology, style

WASHINGTON.—NHTSA is continuing to alter auto lighting standards to allow auto makers to use technological improvements and to provide greater styling freedom.

The first of two new NHTSA vehicle-lighting proposals came at the urging of General Motors and Volkswagen. The rule would allow three new types of standardized replaceable light sources to be used in replaceable-bulb headlamp systems.

The system would have one source providing the upper beam, a second source emitting the lower beam and a third source incorporating both upper and lower beam filaments.

The second proposal would allow the use of type F headlamp systems, which use four rectangular headlamps smaller than those currently used. The proposed Type F headlamp under NHTSA consideration features ease of aiming and can be tested more easily for compliance with federal rules.

May mean recall of early '84 cars

NHTSA refuses plea on Mark VII lights

WASHINGTON.—Ford Motor Co. w ll probably have to repair or replace 24,766 replaceable bulb headlamps on Continental Mark VIIs manufactured before Dec. 20, 1983, due to a NHTSA decision not to grant the auto maker's petition of inconsequential noncompliance.

Ford has not announced a recall and a company spokesperson said the auto maker may petition the safety agency for reconsideration of its decision.

If the recall occurs, however, Ford estimates it will involve many of the first 12,000 Mark VIIs built at the beginning of the model's production.

The headlamps, which have plastic lenses, failed to pass a NHTSA chemical resistence test when high-octane gasoline was wiped across the face of the lens. The government safety agency said all the lamps it tested failed, "manifesting cracks at the bottom of the lamps at the end of the 48-hour period."

Ford and Sylvannia GTE Products Corp. had earlier certified to NHTSA that the lamps met the chemical resistance test. The auto maker began using a lens coating in December, 1983, that apparently passes the government test.

Ford argued that noncompliance with the NHTSA rule was inconsequential since the weld joint in question is inaccessible to a wiping cloth and "as a practical matter, it is highly unlikely that headlamps in service will be wiped with rags so thoroughly soaked in gasoline." The number of headlamps that would come in contact with premium gasoline was also questioned by Ford.

NHTSA said it wished to insure performance of plastic-lensed lamps that were equal to lenses made of glass through the use of abrasion resistance, impact and chemical resistance tests.

The agency said that in formulating the original tests, NHTSA relied on a petition from Ford which stated the company had performed "corrosion testing with chemicals to which the headlamps may reasonably be expected to be exposed during service."

Although Ford and Sylvania objected to the use of gasoline as a test substance, the use of gasoline was finally adopted in exchange for the agency dropping a requirement that the lenses be immersed in gasoline for five minutes and that they also be exposed to motor oil.

Old promoted to VP of American Sunroof

SOUTHGATE, Mich.-Donald J. Old has been promoted to vice president and general manager of American Sunroof Co., a unit of ASC, Inc.

Old joined the ASC organization in 1983 as general manager of American Sunroof. Prior to joining ASC, Old was with Rockwell International as director of materials.

Administration witnesses have rough day

CAFE hearing lively, but indecisive

Continued from Page 1

NHTSA head Steed tried to explain that a decision on the GM and Ford petitions (and AIA's request) had not been yet made.

However, her statements about consumer demand which the auto makers could only "moderately control" and her stance for "free market factors, rather than CAFE standards" as the "most efficient means of achieving appropriate levels of fuel economy over the long run" got her in trouble.

Besides, in addition to saying that no decision has yet been made on the Center for Auto Safety petition for higher CAFE standards, also pending before NHTSA, she appeared to have prejudged that issue by opposing a bill calling for higher standards.

Regardless of the feasibility of higher CAFE standards, Steed noted, the effect of higher standards would be to deny consumers the "larger and more-powerful vehicles which are currently available" and thus "reduce the levels of sales, investment and employment in the domestic auto industry." Those statements, of course, are just as relevant for the rollback decision for GM, Ford and European luxury makers.

But it was William J. Silvey, the Energy Department's head of policy, planning and analysis, who became the target. Silvey's refusal to agree that CAFE standards caused the industry to downsize fleets and produce fuel-efficient cars outraged most senators.

He insisted that while the 1975 law may have "alerted" the auto industry, it was really the "free market" that was controlling. Disagreement also ensued over oil decontrol and current vulnerability to shortages, with several senators noting that a situation was now developing in which any supply disruption could cause another oil shock which the "free market" could not handle.

Finally, Senator Howard Metzenbaum, Ohio Democrat, got Silvey to agree that such a shortage could occur "overnight" while the auto companies would need several years to adjust models if they had abandoned the small-car market to Japan.

Senator John D. Rockefeller IV, West Virginia Democrat, said he had come to learn and make up his mind but not to listen to an "extraordinary commitment to ideology which seems to transcend facts at hand."

In fact, Rockefeller said, the testimony of Administration witnesses had made him sympathetic to the Chrysler viewpoint although the witnesses' statements about the "free market" apparently were meant to help Ford and GM.

Other senators implied that the Administration witnesses had turned them off, and Senator Daniel J. Evans, Washington Republican, who is strongly opposed to a rollback, said it might be a "free market" for Americans but not for the Japanese.

Metzenbaum, who also strongly opposes any rollback, vigorously disagreed about letting the marketplace take over automobile fuel efficiency.

Thus was the stage set for GM, Ford and Chrysler.

Speaking for GM, Dr. Marina v.N. Whitman, vice president in charge of the Public Affairs Staffs Group and chief economist, explained that GM was faced with consumer demand for family-size cars and cars capable of pulling trailers. GM's liability for missing the 1986 CAFE standard has been estimated at some $400 million.

Although GM was able to use in 1983 and 1984 more than $1 billion in credits it had accumulated because it exceeded standards earlier, it now does not have enough in the three-year period it could use. Technology, said Whitman, is not the issue; it's the marketplace. If standards are not rolled back, she added, consumers will retain older cars which are less efficient than today's largest cars.

Moreover, failure to change the standard could significantly affect competition and employment. GM, she said, will have no choice but to restrict production of large cars and cause unemployment. This would benefit foreign companies which have a large bank of unused credits and which could make and import large vehicles.

Any restriction of production would also raise prices, and in any case, Whitman said, the auto trade balance would be hurt. Paying fines, she concluded, was not possible because it would mean violating the law, although paying fines would be the cheapest solution. GM's estimated CAFE for 1985 models is 25.1 MPG.

In Detroit last week, GM Chairman Roger Smith said GM is not going to pay the fine. He said, "It is like saying, 'Here is the red light; go through it and it is only 10 bucks. So run the red light and pay the fine.'

"That is not how we look at it. It is not just a question of paying a penalty; it is a civil fine for breaking the law, and we are not goiong to break the law."

At the hearing, Helen O. Petrauskas, Ford environmental and safety engineering vice president, said Ford tried to avoid any threat of plant closing and instead stressed that if the standard was not rolled back, Ford could and would meet it by increasing production at small-car and small-engine plants.

Ford estimates its 1985 CAFE at 25.9 MPG.

But like GM, Ford does not consider paying the fines an alternative because it also will not consider breaking the law. Its fines for 1986 are estimated at $80 million.

Ford also might have to restrict production of large cars but feels it is "unrealistic" to assume it can significantly increase sales of small cars in the face of the 450,000-unit increase in Japanese imports.

Both Ford and GM contended that Chrysler is no longer a "full-line" company, but both noted that in 1982 Chrysler petitioned for lowering of the light-truck standard—arguing it would have to restrict production and cause unemployment—and won its rollback.

Chrysler's spokesman was Robert S. Miller Jr., executive vice president for finance and administration. He said the record does not support any reduction because the law states the standard should be at the "maximum feasible level."

And, said Miller, the 27.5-MPG standard is feasible because Chrysler has reached it; it is feasible because, as recently as late last year, Ford said it could meet 27.5 MPG by carryback credits, and it is feasible because the "market forces" argument runs counter to the findings of NHTSA's own officials.

Chrysler claimed GM and Ford failed to meet the standard because they "fell short in reducing weight and in introducing new technology."

A rollback is "unfair," said Miller, because it would put Chrysler at a competitive disadvantage since it would take at least five years to get back into the big-car business.

Miller said GM earns about $8 billion a year in "variable profits" on its larger cars and Ford makes about $3 billion. He said that paying CAFE fines ($400 million for GM and $80 million for Ford) would give GM a 2,000 percent return on its "investment" and would give Ford a 3,800 percent return.

Besides, said Miller, CAFE standards should stay in place to help keep the nation on the path toward energy independence. Those who waste gasoline should pay, and an auto maker can either charge more or take a smaller profit, he said.

Ford countered the "unfairness" charge by saying it has made an $800 million investment to make fuel-efficient cars, that it already has more small-engine investment than it can use and—in a snipe at Chrysler—that it took no investment to "walk away from a market and buy from Japan."

Whitman said that Chrysler had left the big-car business because its product was not selling and GM "makes no apology for providing cars the public wants to buy." What was "unfair," she added, was restricting products consumers wanted to buy.

Dr. Robert A. Leone, speaking for the AIA, argued that excessively stringent fuel-economy standards are unfair and counterproductive.

He said manufacturers either have to raise prices to stifle demand for some models or restrict production, and either way the consumer loses.

In addition, he said, too-stringent standards could penalize individual producers. The example here was buying a Saab 900 Turbo at 19.2 MPG at higher cost because the Saab is below the standard, but buying an Audi 5000-S Turbo (18.9 MPG) with no price premium because the Audi is counted with Volkswagen in its CAFE.

Leone called this example "distressing" since all decisions would mean an increase in compliance with standards but would mean a decrease or no change in on-the-road use of gasoline.

Center for Auto Safety Director Clarence Ditlow III said that the biggest single factor in Ford and GM being below standards was their retention of the old rear-wheel-drive vehicles.

Claybrook said the original purposes of the CAFE standards are still valid: To save billions of gallons of gasoline, reduce the nation's vulnerability to oil shocks and address the inadequacies of the free market as it affects fuel economy.

Now, however, Ford and GM are giving NHTSA conflicting signals, she said. They are asking for a rollback of current standard but requesting carryback credits because they expect to exceed standards in the future.

Norris McDonald, speaking for the Environmental Policy Institute, opposed any rollback of CAFE standards. EPI said rolling back the car CAFEs will give a competitive edge to GM and Ford

Plaza L-M signs with O'Gara

Plaza Lincoln-Mercury, Houston, has joined O'Gara Coachworks' dealer network. Rick Messinger, right, Southwest regional sales manager for O'Gara, presents the keys to a 1985 Lincoln Savoy to Erwin Machann, center right, general sales manager; Bill Cooper, center left, general manager, and Buster Madison, president and owner of the dealership.

Supply of imported cars hits 34 days, 2-year high

Continued from Page 1

on May 1, up from 48.41 percent on April 1. The 23-day supply of Japanese cars was the highest in three months.

The Chevrolet Spectrum, built by Isuzu, remained in oversupply, as it has since its introduction. Reduced sales helped push it to a 103-day supply. Chrysler Corp.'s best-selling captives, Colt by Mitsubishi, rose to nearly the ideal level. Isuzu's figures were estimated by Automotive News from its dealer-supply numbers.

German makes accounted for 36.77 percent of import-car inventories, up a bit from the April 1 share of 35.77 percent. German-car sales increased during the month, but shipments increased more. The two makes showing big jumps in their days-supply levels, Audi and Volkswagen, could attribute those jumps solely to increased shipments. Both increased their selling rates last month. The Merkur, Lincoln-Mercury's German captive, shows a high supply typical of a newly launched model.

The other European makes had a 14.01-percent share of May 1 inventory, down from 15.82 percent a month earlier. In this category, sales held nearly steady and inventories increased—just not as much as the increase for the Japanese and Germans.

The Japanese car makes and their days-supply figures on May 1: Isuzu, 71; Nissan, 37; Mitsubishi, 31; Subaru, 18; Mazda, 16; Toyota, 15, and Honda (imports only), 9. The Chevrolet captives averaged an 88-day supply: 103 for Spectrum and 41 for the Suzuki-built Sprint. The Chrysler captives averaged a 59-day supply: Dodge Conquest, 128; Plymouth Conquest, 123; Dodge Vista, 70; Plymouth Vista, 68; Dodge and Plymouth Colt, each 48 days.

The German makes: Merkur, 117; Audi, 95; VW (imports only), 78; BMW, 65; Porsche, 56, and Mercedes-Benz, 41.

Other European makes: Renault, 192; Peugeot, 71; Volvo, 53; Saab, 42; Alfa Romeo, 39, and Jaguar, 22 (estimated). Stocks are no longer reported by Maserati.

The days-supply figures for trucks: Isuzu, 58; Chrysler, 40; Toyota, 33; Nissan (including domestics), 27; Mazda, 20, and Mitsubishi, 17.

Automotive News names Carver to production post

Diane Carver has been appointed advertising production manager of Automotive News.

Carver most recently served as production manager of Monthly Detroit and has been employed by Crain Communications since 1982.

Diane Carver

"We are pleased to have Diane as part of our advertising production staff," said Robert C. Adams, production director of Crain Communications. "She has a strong production background and will make a significant contribution to our Automotive News advertising production department."

Carver has a bachelor's degree in business from Eastern Michigan University.

To save 5,800 jobs

Kenosha may build new plant for AMC

Continued from Page 1

to bargain. A company spokesman said the letter was misinterpreted and that the company is seeking only a commitment that the conditions it is asking are met.

The concessions included accepting a profit-sharing formula for payback of the entire $110 million to $150 million EIP, new working conditions and wage cuts to bring the plant in line with the 1983 General Motors-UAW agreement, and other commitments to the company to keep the Kenosha plant competitive in a world market in order to guarantee future production in Kenosha.

Changes in wages and work rules would include shorter vacations, fewer days off, a 37-cent-an-hour wage cut for assembly workers, a lower new-hire rate, a *no-strike clause, shorter relief* time, seniority changes, health-care cost-containment programs and a cut in the number of union representives.

In the letter, Calmes said if the local did not make the commitment, plans would be made to close the two operations.

Under Wisconsin law a company is required to give 60 days' notice if it is going to close a plant.

That would mean AMC could shut down those operations as early as July, but John Drew, a member of the Local 72 executive board, said the company has told the union it will close Milwaukee stamping on Sept. 16, 1985; Kenosha assembly on July 1, 1986, and that Kenosha engine will be phased out during the 1986-87 model year if concessions are not granted.

Kenosha engine provides some of the engines for AMC's Jeep operations and some for the Eagle which is built in Brampton, Ont.

Kenosha builds AMC's only offering in the subcompact market. AMC will be getting a compact from its French partner Renault sometime before the 1987 model year when it will introduce a new intermediate passenger car built at its new plant in Brampton.

If AMC can arrange to keep Kenosha open or have a new plant built, it will be able to offer a full line of vehicles, built in North America.

Calmes has said AMC has no intention of giving up the Alliance and Encore models and would consider moving that production to Canada or overseas if a satisfactory agreement cannot be reached with the union.

In 1982 negotiations, the union *agreed to invest between $110* million and $150 million to help the company create a new production program by banking some wages and benefits, worth about $10,000 for each employe. A similar agreeement was negotiated at AMC's Jeep plant in Toledo.

The contract gave the union the choice of two payback methods: Profit sharing, which will cost AMC about $3.8 million a year, and a wheel tax, which requires the company to pay about $100 per vehicle produced in North America, or about $40 million a year.

AMC officials have told the union they must accept the profit-sharing payback for the duration. All the money is to be paid back by 1988, but that will be very difficult using the profit-sharing formula alone.

The union has already agreed to accept profit sharing for the first year of the payback.

Shop business climbs 7 pct. for first quarter

Continued from Page 3

In the first quarter of 1985, the leading indicator was total customer-paid and warranty labor sales, which were 10.5 percent than the year-earlier volume.

Shop parts sales, customer-paid and warranty, were up 8.1 percent through March, while gross profit on all labor, parts and accessories sales—the No. 1 indicator from a dealer's viewpoint—was 7.3 percent percent higher than a year ago.

Three-month repair orders written showed a gain of 6.8 percent, sales of all parts and accessories were higher by 4.8 percent and sales of the same items to outside customers were up 2.5 percent.

Gross profit on all shop sales was the leading indicator in March, with a boost of 6.6 percent over the same month in 1984. Shop parts volume rose 5.6 percent and total labor sales were 5.4 percent higher than last year.

The number of repair orders written during the month showed a gain of 4.3 percent, sales of all parts and accessories were up 3.2 percent and P & A sales to outside customers were 1.5 percent higher than a year ago.

Service Index figures are compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

V-6 shortage threatens GM's marketing plans

Continued from Page 1

a 31-day supply, the Buick Century had a 38-day supply, the Pontiac 6000 had a 40-day supply and the Chevrolet Celebrity had a 42-day supply.

There was no indication how many of those cars were four-cylinder models.

"GM is tapped out in the fastest-growing market segment, the performance intermediates," said auto analyst Arthur G. Davis, of Prescott, Ball & Turben.

Davis said the situation is not desperate, however. "GM still leads the way in this market because it still offers more performance V-6 engines than anybody, including the imports," he said.

Davis said he expects the U.S. car market next year to remain essentially flat, with 11.0 million sales vs. 10.8 this year, with most of the small increase coming at the low end of the market.

"Consequently," Davis said, "GM has the potential for an upgraded product mix starting in 1986.

There are some who believe the V-6 shortage might be overstated.

"I believe the constraint is imagined, not real," said Bill Graham, vehicle procurement manager for Automotive Rentals, Inc.

"We've had a tough time getting the factory to build some of the V-6 models this year, but I've heard from some of the GM people that the contstraint is designed to help meet CAFE."

Graham said ARI has been taking the same 60-40 mix the factory has been building for dealers and that when GM made its 1986 model presentations two months ago, there were no indications it intended to allocate V-6s next year.

Business car changes go to White House

WASHINGTON.—The Senate last week approved by voice vote the conference version of a bill to repeal tax record-keeping rules for business autos.

The House approved the same measure a week earlier. The White House has indicated President Reagan will sign the bill into law.

And auto-marriage rumors fill the land

It's springtime in Rome

Continued from Page 2

would be the head of Fiat's automobile division, Vittorio Ghidella —on the recommendation of Ford's Robert A. Lutz, who would then return to the U.S. to spearhead sales of the company's products.

The rumors are that an amalgamation would be a step-by-step process, involving in the early stages plants producing common components. Joint cars would follow. At the same time, Fiat's production engineering division, Comau, would automate Ford factories in Europe and around the world.

If only half the suggestions are true, they will have some far-reaching consequences around the world.

Meanwhile, in Rome, the economics magazine, Il Mondo, claimed to have identified GM representatives visiting Alfa Romeo. The purpose of the visit was alleged to be distribution of Alfa Romeos in the U.S. by GM.

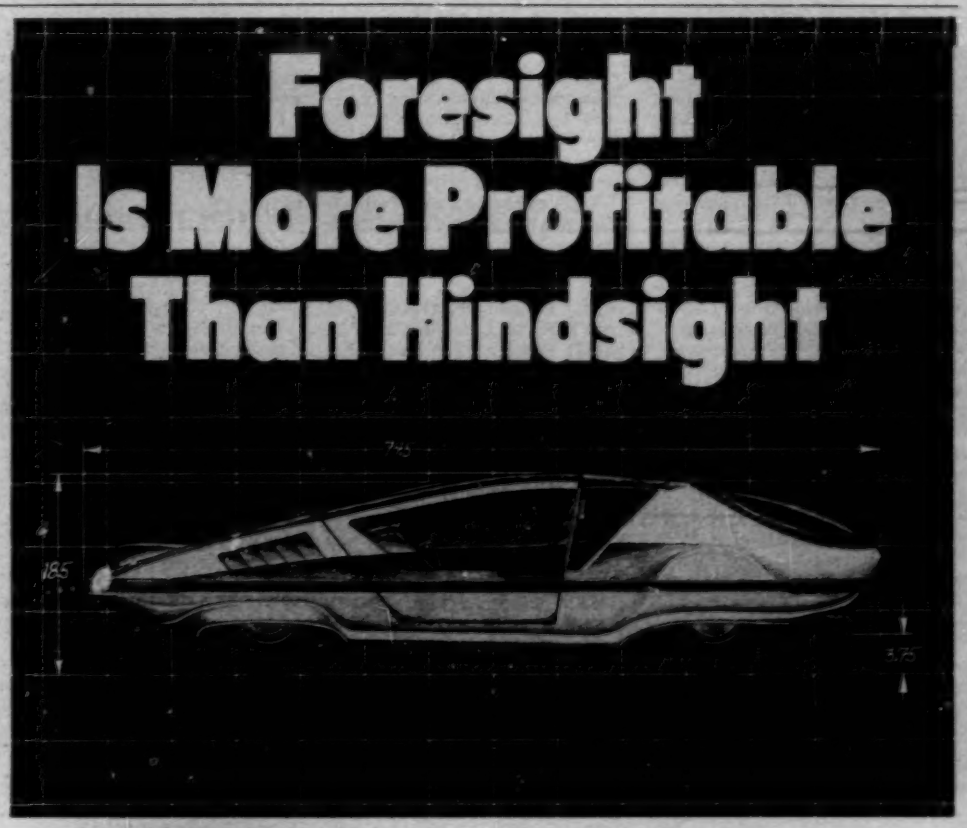
Given GM's current think-big philosophy, this seems unlikely. If GM is discussing anything with Alfa Romeo, it could be a joint sports-car after the fashion of the Chrysler-Maserati link. At its most ambitious, it would be a cash-rich company taking control of a company that has lost a great deal of money but has the medium-term potential of turning a profit.

And Alfa Romeo is still one of the great, emotive names in the automobile business.

Case builds Acura deal

PLANTATION, Fla.—Ground has been broken here for Rick Case Acura.

Foresight Is More Profitable Than Hindsight



Our used car projected values are a combination of historic information from our Data Bank and the actual results of Used Car Wholesale Auctions compiled by Black Book's own surveymen on location at Major Auctions across the country. That's why data we use in figuring residual lease values for the years ahead will give you a profitable foresight.

When a new model car is introduced, we project values based on the cost of the new model, modified by such factors as the manufacturer, style, size, weight class, mileage and corresponding makes and models from our Computer Bank.

Black Book keeps you posted from month to month on updated retail and invoice prices for new domestic and import cars and trucks, freight charts to major cities and high mileage charts for compact, standard and luxury-sized automobiles.

We began professional reporting in 1955 because we recognized the need for actual auction transactions in assuring accuracy. We've built a reputation for dependability on that accuracy...anything less is just a guess.

Anything Less Is A Guess!

Year-to-date car total tops 3.4 million

Week's output climbs to 184,260

By Louise Kertesz
Detroit Reporter

U.S. manufacturers planned to build 184,260 cars last week, 3.55 percent more than the previous week's 177,935 and 8.26 percent more than the year-ago week's 170,196.

Year-to-date, 3,412,160 cars have been completed, 2.52 percent more than the 3,328,411 assembled last year at this time.

Last week's scheduled production was shared as follows: General Motors, 57.53 percent; Ford Motor Co., 19.19 percent; Chrysler Corp., 17.48 percent; American Motors, 1.98 percent; Honda of America Mfg. Co., 1.70 percent; Volkswagen of America, 1.28 percent; New United Motor Mfg. Co., 0.49 percent, and Nissan Motor Mfg. Co., U.S.A., 0.35 percent.

Ford halted production of the Capri in Dearborn during the week ended May 11 due to a shortage of acceptable parts, a company spokesman said.

GM scheduled two overtime shifts Saturday (May 18) at its plants in Detroit; Pontiac (G-line); Janesville, Wis.; Leeds, Mo.; Arlington, Tex.; Fairfax, Kans.; Framingham, Mass., and Wilmington, Del.

One overtime shift is scheduled Saturday at GM's plants in Lansing (Nos. 1 and 2).

Ford planned Saturday overtime at its plants in Chicago, Dearborn and Lorain, O.

Daily overtime is slated this week (May 20) at Ford plants in Chicago; Lorain, O.; Dearborn; Edison, N.J.; Wayne, Mich., and Kansas City.

Chrysler scheduled two overtime shifts Saturday at its plants in Belvidere, Ill., and St. Louis (No. 1).

The same plants as well as St. Louis No. 2 are scheduled to work two nine-hour daily shifts this week.

Chrysler's Jefferson (Detroit) plant is slated to work two 8½-hour daily shifts this week.

Chase Econometrics, DRI are expected to merge

BALA CYNWYD, Pa.—Chase Manhattan Corp. has renewed negotiations with McGraw-Hill, Inc., for the sale of Chase Econometrics, its economic forecasting and consulting firm.

Chase Econometrics would be merged with McGraw-Hill's forecasting firm, Data Resources, Inc. (DRI).

The deal would make the two former competitors a dominant force in the economic forecasting business with Wharton Econometric Forecasting Associates as the only other leading independent firm in the field.

Chase Econometrics employes were told that DRI would buy its data bases and client lists and was particularly interested in its agricultural and metals groups. They also were told the sale was imminent, and an agreement could be signed as early as Tuesday (May 21).

They were told that only a portion of Chase Econometrics' 240 employes would be moved to DRI, based in Lexington, Mass.

George Brown, DRI executive vice president, confirmed that "active discussions" between the two companies were underway, but he said it was unlikely the sale would be closed this week.

Brown acknowledged that some companies, including many auto and auto supplier companies, subscribe to both Chase Econometrics and DRI services. He said the two, nevertheless, have different emphasis and different products so they would complement each other.

Chase Manhattan, the nation's third largest bank, has been trying to sell the forecasting firm, saying it doesn't fit into its strategic thrust.

The two companies had negotiated last December, but talks ended when Chase Manhattan rejected the New York publishing firm's initial offer.

Chase Manhattan also had negotiated with Mead Corp., which owns an electronic publishing service, but those talks also broke off.

Chase Econometrics, headquartered here, was founded by Michael K. Evans in 1969. Evans sold 80 percent of the company to Chase Manhattan in 1971 and the remainder in 1979. He now heads another economics consulting firm, Evans Economics, Inc., Washington.

Lawrence Chimerine, former U.S. economic research and forecasting manager for International Business Machines Corp., now heads Chase Econometrics.

DRI, founded by the late Otto Eckstein, was purchased by McGraw-Hill in 1979. DRI and Automotive News collaborate on a quarterly world outlook for the automotive industry.

Truck production slips but tops 75,000 again

Domestic truck makers scheduled production of 75,719 units last week, 1.16 percent less than the previous week's 76,609.

The prior week's build fell 968 units short of target but was still the best week's output since the week ended May 19, 1979, when 81,851 trucks were assembled.

Last week's production was 13.70 percent better than the year-ago week's 66,594.

So far this year, 1,351,342 trucks have been built, 8.91 percent more than the 1,240,812 completed last year at this point.

General Motors plants working two overtime shifts Saturday (May 18) were: Janesville, Wis.; Flint (Nos. 1 and 2), and St. Louis.

GM's Baltimore plant worked one overtime shift Saturday.

Ford Motor Co. scheduled Saturday overtime at its plants in Norfolk, Louisville and Kansas City.

Ford plants working daily overtime this week (May 20) are: Wayne, Mich.; Kansas City; Norfolk; Twin Cities; Lorain, O., and Louisville.

Chrysler Corp.'s Warren (Mich.) plant is scheduled to work two nine-hour daily shifts this week.

Holiday weekend cuts output in Canadian plants

With all plants except those in Quebec idle Friday (May 17) for the Victoria Day weekend, Canadian makers scheduled production of 23,133 cars last week, 6.58 percent less than the previous week's 24,763.

All assembly plants are closed for the holiday today (May 20).

The prior week's total—the best weekly output this year—fell 1,654 units short of a projected two-year high.

Last week's build was 5.94 percent better than the year-ago week's 21,836.

Year-to-date auto production has passed the 400,000 mark, with 401,510 cars assembled, 10.07 percent less than the 446,447 completed last year at this time.

American Motors' Brampton (Ont.) plant, which builds the Eagle, was closed last week for for inventory adjustment. Production is scheduled to resume May 27.

Truck manufacturers scheduled production of 16,350 units for the shortened build last week, 14.87 percent less than the previous week's 19,206 but 8.31 percent more than the year-ago week's 15,095.

So far this year, 354,029 trucks have been assembled, 6.99 percent more than the 330,892 completed last year at this time.

Looking at Liberty

Prototype displayed at Chrysler meeting

Chrysler's Liberty prototype was a center of attraction at the company's annual meeting of shareholders in Anaheim, Calif. The prototype was developed over the past 28 months by Chrysler's Advance Development Group in cooperation with the design, engineering, purchasing and manufacturing departments and 40 suppliers. Components and ideas from this project may be used in models scheduled for introduction as early as 1989, according to Chrysler.

U.S. study gives imports 36 pct. of 1988 market

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The U.S. Department of Commerce estimates that new-car sales in this country will total 11.2 million in 1988, up from 10.4 million last year and 10.7 million this year.

That is good news for the auto industry.

But the Commerce Department also estimates that 4,060,000 of those 11.2 million cars will be imports—a 36 percent market share, up from 2,440,000 or 23.5 percent last year.

That is *not* good news for the domestic auto industry.

And, according to Commerce, sales of cars built in North America by the Big Four manufacturers will plummet to 6,365,000 in 1988 from 7,818,000 in 1984.

That is even more-calamitous news for the U.S.-based makers.

The department's Office of Auto Industry Affairs released the figures to a Washington meeting of the Automotive Original Equipment Manufacturers, Inc.

The normally quiet, behind-the-scenes group reacted sharply to the numbers, asking Robert Watkins, deputy assistant secretary of automotive affairs, what level of import penetration the Reagan Admnistration would find unacceptable in the U.S. auto industry.

Watkins, who recently took the Commerce post after leaving MVMA, declined to give the parts manufacturers a specific number. He did say, however, that the projected slide in domestic-maker market share was not "irreversible" and that his department expected U.S. firms to compete and hopefully win back market share beyond 1988.

In 1988, the Commerce Department expects U.S. sales of 7.14 million new cars built in the U.S. and Canada, but that includes 775,000 assembled in the U.S. by Japanese makers. In 1984, the total was 7.818 million sales by domestic manufacturers plus 133,000 Ohio-built Hondas for a total of 7.951 million.

The 775,000 Japanese cars produced in the U.S. in 1988 will include a larger number of Hondas plus the General Motors-Toyota cars from California, the Nissan models from Tennessee and the Mazda units from Flat Rock, Mich. The Chrysler-Mitsubishi joint venture won't be producing cars in the U.S. by that time.

According to the Commerce Department projection, the balance of 11.2 million sales in 1988 will be sourced as follows: 3,075,000 from Japan (including 400,000 captive imports), 610,000 from Europe, 240,000 from Korea and 135,000 from other countries.

By comparison, 1984 sourcing of imports consisted of 1,906,000 from Japan (including 105,000 captives) and 534,000 from Europe.

Using the Commerce projections for 1988, the market shares would be 27 percent for Japan, 9 percent for other imports, 57 percent for domestic makers and 7 percent for Japanese cars built in the U.S.

In 1984, the numbers were 18 percent for Japan, 5 percent for other imports, 76 percent for domestic makers and one percent for Japanse cars built in the U.S.

The Commerce Department projection assumes U.S. sales declines for U.S.-Canadian-built cars in 1985, 1986, 1987 and 1988.

The department said that total will fall from 7,818,000 last year to 7,660,000 this year and to 6,940,000 in 1986. The estimate is 6,600,000 in 1987 and 6,365,000 in 1988.

Sales of U.S.-built Japanese cars are seen rising from 133,000 last year to 250,000 this year and 525,000 in 1986. The estimate is 675,000 in 1987 and 775,000 in 1988.

Overall sales, including imports, were 10.4 million in 1984 and are

Mid-May sales soar after early-month sag

By Jenny L. King
Detroit Reporter

Mid-May probably comes too late in the year for a selling boom at that time to be called a spring fling.

But U.S. auto makers and their dealers surely would agree that they enjoyed a good old-fashioned sales romp May 11-20, with the daily selling rate well above 30,000 units—the fourth highest so far this calendar year.

If it wasn't spring fever causing customers to get out their check books, it must have been the myriad 8.5 and 8.8 percent interest loans offered at domestic dealerships. The incentives were available on selected models at General Motors, Ford Motor Co., Chrysler Corp. and American Motors outlets.

There were healthy improvements in the May 11-20 period for all but AMC, and the total was best for the period since the spectacular sales year of 1973.

The total of 267,809 new domestic cars was up 18.08 percent from 226,797 in 1984. Early-May sales this year were 217,732. Back in 1973, the mid-month number was 329,482.

All this with only eight selling days. The mid-May daily rate averaged 33,476, up 18.08 percent

breaking news

GM capital spending second highest ever

DETROIT.—General Motors' worldwide capital expenditures for the 1985 calendar year will be $9 billion. At last Friday's annual meeting, GM Chairman Roger Smith told shareholders this would be the second highest annual spending in GM's history and "one of the best investments we can make in the future." In 1981, GM's capital expenditures were $9.74 billion. Spending totaled $6 billion in 1984.

Foes of CAFE cut mobilize in Senate

WASHINGTON.—A "sense of the Senate" resolution urging NHTSA to retain the current CAFE standards is being circulated jointly by Senators Daniel J. Evans, Washington Republican, and Howard M. Metzenbaum, Ohio Democrat. Both are members of the Senate Energy Committee. At presstime, the Senate resolution, which has so far collected nine additional signatures, had not been introduced. The bipartisan effort—with six Republican and five Democratic signers—is intended to send a signal to NHTSA head Diane Steed, who has said she plans a decision by early June.

Dealers adapting to FTC regulation

U.C. stickers bring few problems

By Edward Lapham
Marketing Editor

U.S. new-car dealers seem to be adapting quickly to the FTC used-car sticker rule, according to a nationwide spot check by Automotive News.

That rule, which became effective May 9, requires a window sticker that lists certain facts about the car and conditions of sale, including what, if anything, is warranted, length of the warranty, what percentage of repair costs the dealer will pay and if the car is being sold "as-is."

Despite printing problems and an early fear that sticker forms might not be available by May 9, most dealers reported they received stickers in time to be in compliance on the effective date.

Some said they received the stickers a few days late and needed the grace period, but all dealers surveyed last week were in compliance.

One dealer said other dealers in his city called him the day after the effective date to warn him that FTC enforcement people were already making the rounds. The fines are set at $10,000 per car per day of non-compliance, and the dealers all seemed to take that seriously.

While most dealers questioned

Wisconsin plants can be saved if company and union work together—and soon

AMC labor situation serious, but not hopeless

By Marjorie Sorge
Labor Editor

There is no need to blow taps for American Motors' Kenosha assembly plant yet. The battle has just begun.

So far, the company and UAW Locals in Kenosha and Milwaukee have failed to reach an agreement on concessions required to keep the operations open. At presstime they had not even been able to agree to sit down at the bargaining table.

The company has said it needs a commitment from the locals for 17 specific concessions and hasn't received it.

Kenosha Local 72 said it has made that commitment to negotiate those demands, asking the company to sit down and bargain, and the company was guilty of "an act of unprecedented corporate irresponsibility" by issuing the termination notices last week.

News Analysis

Solidarity House, the UAW headquarters, is trying to work with both sides to get them to the table at a mutually beneficical time. The contracts are with the locals and are not national agreements.

AMC says Kenosha is the most expensive plant in the world. Labor costs there are $4 an hour higher than at any other auto plant in the U.S., sources said.

While Kenosha has not agreed to accept the 17 points without talking, Local 75 in Milwaukee sent a letter to AMC last Thursday (May 23) committing to reaching an agreement that would include —but would not be limited to— those 17 points.

Last week, both Kenosha and Milwaukee voted to negotiate on the points, but AMC maintained that was not good enough and wanted blanket appoval.

Workers at the Milwaukee stamping operation have very high seniority, the lowest is 27 years. And while they are very concerned about keeping the operation open for many more years, they are also deeply concerned about their pensions.

At presstime AMC had not received the letter, but it is unlikely that blanket approval from one local will make much difference,

But 'we're not on an acquisition binge,' Iacocca says

Chrysler prepared to branch out

By Michelle Krebs
Financial Editor

ANAHEIM, Calif.—Chrysler Corp. is poised to make an acquisition or form an affiliation with companies in the aerospace, defense, financial services or materials fields, Chrysler Chairman Lee Iacocca told shareholders at the company's annual meeting here.

Chrysler reportedly considered bidding for Hughes Aircraft Co. with Boeing Co. Boeing is believed to have bid on the privately held Hughes, which is on the auction block, as did General Motors and Ford Motor Co. Hughes is expected to sell for up to $6 billion.

The Big Three are sitting on healthy cash reserves and have indicated intentions to diversify into high-tech areas through acquisitions, joint ventures or equity positions in companies. Chrysler has nearly $3 billion in cash reserves and marketable securities, which compares with GM's $8.4 billion and Ford's $5.3 billion.

"We're not going out on an acquisition binge, but Chrysler and its management represent attractive partners today to a lot of companies in a lot of businesses around the world," Iacocca said.

"If there's an affiliation somewhere that we think would be beneficial to our shareholders or augment our core business, we'll take a good hard look at it," he added.

At the annual meeting, Iacocca announced a joint venture between the auto company's financial subsidiary, Chrysler Financial Corp., and General Electric Credit Corp. The venture, called CGE Associates, will finance machinery, equipment and real estate for third parties. Terms of the deal were not disclosed.

"We're beginning to move into some new directions," Iacocca said. "The bits and pieces of a high-tech, world-based company are beginning to emerge."

Iacocca cited to shareholders Chrysler's other moves in recent months. Chrysler has:

1. Contracted with Lotus for engineering development work.

2. Signed an agreement with its Japanese partner, Mitsubishi Motors Corp., to jointly produce a small car in the U.S. Chrysler, which upped its equity in Mitsubishi to 24 percent from 15 percent, also renewed its contract with Mitsubishi to import V-6 engines.

3. Contracted with the Italian auto maker, Maserati S.p.A., to develop and build a two-seater sports car for the U.S. market. Production will amount to 5,000 to 10,000 cars annually. The car will sell for at least $25,000 and will be introduced in the spring of 1987.

Chrysler, in turn, paid $2.3 million for a 5-percent stake in Maserati.

4. Signed a deal with the Korean electronics firm, Samsung Group, for parts and components.

"All this means access to some of the best technology, design,

MIE restyles the Maserati Biturbo

MIE (Maserati Information Exchange), Bellevue, Wash., is responsible for the MIE Biturbo, a restyled Maserati Biturbo. It has new front and rear bumpers, a spoiler on the rear edge and side skirts, all painted body color. Other refinements include body-colored front grille and door handles and black window trim.

They don't do this at Ford/GM meetings

ANAHEIM, Calif.—Chrysler Corp. shareholders proved to be speedier than the automotive press corps in descending upon Chrysler Chairman Lee Iacocca after the company's annual meeting here.

Shareholders, with Iacocca's autobiography in hand, swarmed around him for autographs, leaving reporters to yell their questions from far behind the crowd. Iacocca fielded the usual questions and requests from shareholders, such as "please run for president" to which he replied "absolutely not."

Transfer of property to attorney challenged

DeLorean ranch splits 'allies'

By Edward Lapham
Marketing Editor

The saga of bankrupt DeLorean Motor Co. took yet another new twist last week as traditional allies prepared for their first public spat.

So serious was the rift that it seemed likely to spill out from behind closed doors into open court.

The disagreement, between DMC's court-appointed trustee and the company's largest creditors, involves the proposed settlement of a fraud lawsuit against John DeLorean, his former wife Cristina Ferrare and one of his attorneys.

In early 1984, DMC trustee David W. Allard Jr. filed suit in federal court in San Diego, charging that John DeLorean's transfer of his Pauma Valley ranch to attorney Howard L. Weitzman was a fraudulent conveyance.

DeLorean and Weitzman said the transfer was payment for legal fees for the lawyer's defense of DeLorean on federal drug-trafficking charges. DeLorean was acquitted of all charges.

Allard maintained that the property, valued in excess of $2.5 million, represented an excessive fee and that the transfer was made to hide a DeLorean asset which could later be awarded to the DMC estate and used to repay creditors.

On May 6, Allard's attorneys, Sheldon S. Toll and Robert S. Weiss, filed a proposed settlement under which Weitzman would pay the estate $325,000 in exchange for Allard's dropping the suit.

An Automotive News poll of leading creditors on the creditors committee, found overwhelming disapproval of the settlement, which must be approved both in federal court in San Diego and by federal bankruptcy Judge Ray Reynolds Graves in Detroit.

It appeared last week that one or more of the largest creditors, either individually or collectively, might file formal objections with the court later this week. The hearing before Judge Graves is scheduled for Monday, June 3.

Zachary Shimer, one of the attorneys representing Renault, called the proposed settlement "disappointing and disturbing."

"We don't like it and we are seriously considering filing an objection," Shimer said last week.

S. Pitkin Marshall, who represents Audio Systems, Inc., said he was not consulted by the trustee about the proposed settlement terms.

"There is nothing about it that we like," Marshall said.

The consensus among the largest creditors was that the cash settlement was too small and that the covenant not to sue Weitzman for any claim the trustee "has or could have asserted" against him was inappropriate.

"This is basically a difference of opinion," said the trustee's attorney Weiss. "I respect their right to disagree."

Weiss played down the differences and said he had "no hurt feelings" about the objections. He also said that he and client Allard work closely with creditors committee chairman Malcolm R. Schade, who represents the British Government.

"We have identical interests, but different judgments," Weiss said.

Weiss and Toll, of the Detroit law firm Honigman Miller Schwartz and Cohn, have been involved in the bankruptcy case since DMC filed for bankruptcy in October, 1982.

Initially, they represented the unsecured creditors' commitee.

When DMC decided it no longer wanted to try to reorganize under Chapter 11 of the Bankruptcy Code and converted to liquidation

U.S. sales in Japan: 600 for four months

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Although sales of imported cars in Japan continued to escalate in the first four months of 1985, sales of American-made cars have now dipped to their lowest level, according to figures released by the Japan Automobile Importers Assn.

While sales of all imported cars in the first four months totaled 15,681 units, up 26.1 percent over the year-earlier period, American-built automobiles accounted for 600 of the total sales, down 18.4 percent from the corresponding 1984 figure.

Outperforming American cars were those imported from West Germany, Italy and Great Britain.

The biggest gain was recorded by West Germany, whose car sales jumped 34.6 percent to 12,569 units during the period. Sales of Italian and British cars totaled 764 and 706 units, respectively.

Sales of imported cars in Japan during 1984 increased 19 percent to 41,982 units to mark the first increase in five years.

However, American-car sales remained depressed in 1984, slumping 10 percent to 2,382 units, with the resulting share of the import market dipping to 5.7 percent, or one-fifth of what it was in the peak of the 1970s.

Analyzing the slump in U.S. car sales, industry sources said American cars have a bad reputation despite recent improvements in fuel economy and quality.

It also was noted that, in spite of lower prices for used American cars, sales continue to be sluggish because of the used U.S. cars' unpopularity among Japanese buyers.

The current situation is said to be in contrast to the popularity the spacious American cars enjoyed in Japan in the 1970s, when they accounted for 28 percent, or 16,739, of the 60,161 imported units sold in 1979, the peak import-car year.

With the price of gasoline in the 1980s soaring, Japanese motorists turned to cars that were economical to operate, and avoided buying U.S. cars because of the larger engines, industry sources said.

More reasons contributing to the unpopularity of American-made cars, according to sources, were their mechanical defects and poorer efficiency when compared with Japanese and West German vehicles.

Meanwhile, Japan's three lead-

5-millionth car built at GM's Arlington plant

A Chevrolet Monte Carlo Super Sport was the 5-millionth car to be produced at the Chevrolet-Pontiac-Canada assembly plant in Arlington, Tex., since operations began there in 1954. Standing with the milestone car are, from left: Bill Simon, longest credited service—salary; Elmer Waits, longest credited service—hourly; Billy Joe Armstrong, general manager, Graff Chevrolet, Grand Prairie, Tex. (which will take delivery of the car); John Childers, president, UAW Local 276; R.E. Peterson, chairman, shop committee, Local 276, and Paul Townley, plant manager.

GM expands new program of ad buying

By Edward Lapham
Marketing Editor

A few more details of General Motors' revamped media-buying program came into focus last week.

Just as GM earlier decided to consolidate its negotiating efforts with TV networks, it has now changed the way it will buy print ad space in an effort to maximize dollar volume and frequency discounts throughout the corporation.

The first new assignments came in the largest consumer publications, with divisions generally following individual publication or company lines, rather than by category, Automotive News sources said.

For example, Campbell-Ewald will be negotiating with all of the Time, Inc., publications plus U.S. News & World Report on behalf of all GM divisions, according to sources, while Leo Burnett will negotiate with Newsweek, all Hearst books and all of the Times Mirror books.

As another example, McCann-Erickson will likely negotiate with all of the Conde Nast publications.

As with the TV shuffle, this does not affect agency-of-record status or billing procedures.

"There is definitely a pattern developing," said one Detroit magazine source.

"They've picked the agency they think can exert the most pressure

Month's total is 926,902

March registrations best since '73

By Jenny L. King
Detroit Reporter

March U.S. new-car registrations reached their best total for that month in 12 years, were up 10.96 percent from a year ago and soared 17.32 percent from a month earlier.

Figures prepared by R.L. Polk

Table on Page 46

& Co. show combined domestic and import registrations of 926,902, highest for March since 1973 when 998,369 were recorded. March, 1984, registrations numbered 835,311, making this year's figure 10.96 percent ahead in comparison. In February of the current year, 790,072 new cars were officially added to the rolls.

March domestic registrations were up 10.79 percent from the corresponding 1984 month, to 705,203 from 636,509. Imports were up 11.15 percent, to 221,699 from 198,802. Their share of the month's market increased 0.12 percentage points, to 23.92 percent from 23.80 percent.

Along with the imports, but in substantially greater amounts, Chrysler Corp. and Ford Motor Co. increased their segments of the total market. Chrysler gained 2.97 percentage points and Ford was up 2.77 percentage points. Chrysler domestic-car registrations numbered 112,409 for 12.13 percent of the market. This compared with 76,549 registrations a year earlier, representing 9.16 percent.

Ford climbed to 21.45 percent from 18.68 percent of the market. Ford Motor Co.'s Ford make also managed to surpass Chevrolet to become the top make for the month (133,574 Fords vs. 130,237 Chevrolets).

American Motors dropped 0.52 percentage points March to March, and General Motors gave back 5.34 percentage points, finishing the month with 41.12 percent this year, compared with 46.46 percent in 1984.

Miscellaneous domestics' small numbers failed to earn them even 0.01 percent of the total either year.

Excluding imports, the March registrations market was divided thus: GM had 54.05 percent; Ford, 28.19 percent; Chrysler, 15.94 percent, and AMC, 1.82 percent. A year ago, GM held 60.97 percent; Ford, 24.52 percent; Chrysler, 12.03 percent, and AMC, 2.48 percent.

Imports, with 23.92 percent of the total, were second in size to domestic intermediates in the total market-class breakout. U.S. intermediates claimed 26.45 percent; imports, 23.92 percent; compacts, 19.83 percent; subcompacts, 12.64 percent; standard-size cars, 9.59 percent, and luxury models, 7.57 percent.

Minus imports, the March market class spectrum included: Intermediates, 34.77 percent; compacts, 26.06 percent; subcompacts, 16.60 percent; standards, 12.60 percent, and luxury cars, 9.95 percent.

First-quarter registrations were up 5.23 percent from the same period a year earlier. Domestics climbed 4.77 percent and imports were up 6.63 percent. January-March grand totals were 2,488,617 this year, vs. 2,364,869 in 1984. Of those numbers, 1,861,480 were domestics and 627,137 were imports this year compared with 1,776,739 domestics and 588,130 imports in the first quarter of 1984.

Chrysler again was the big winner in the first quarter, picking up 2.49 percentage points in penetration of the total market. Ford's gain was 1.34 percentage points, and imports were up 0.33 points. GM tumbled 3.60 percentage points and AMC dropped 0.56 points.

Shares for the quarter included: GM, 41.37 percent; Ford, 20.32 percent; Chrysler, 11.68 percent; AMC, 1.43 percent, and imports, nnm25.20 percent. A year earlier they were: GM, 44.97 percent; Ford, 18.98 percent; Chrysler, 9.19 percent; AMC, 1.99 percent, and imports, 24.87 percent.

The domestics-only first-quarter, 1985, breakdown featured GM, 55.31 percent; Ford, 27.16 percent; Chrysler, 15.62 percent, and AMC, 1.91 percent. The preceding year it was GM, 59.86 percent; Ford,25.27 percent; Chrysler, 12.23 percent, and AMC, 2.64 percent.

Protecting imported cars still a major AIADA aim

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Protecting imported-car sales from congressional action remains much on the mind of import dealers, judging from discussions at the eighth annual meeting of the American International Automobile Dealers Assn. here last week.

Although this year's meeting was not faced with a looming domestic-content bill or with U.S.-urged restraints on Japanese imports, recent congressional anger over Japanese trading practices was clearly a concern of AIADA members and leaders.

As in the past, members were urged to lobby their senators and representatives against protectionist measures that could hurt imported-car sales.

Dealers said they had met with lawmakers to caution against reciprocal trade measures that could effect imported-car sales and against the import surcharge idea which has found some support on Capitol Hill.

The "American International Automotive Congress," as AIADA calls its Washington meeting, featured for the first time an educational display manned by representatives of foreign car makers.

The exhibit was also aimed at lawmakers and government officials who dropped by for AIADA's Congressional Dinner.

Although the display was designed to "highlight the economic importance of the imported automobile industry in the areas of employment, taxes and technology," most exhibitors seemed to stress product rather than their contribution to U.S. employment and economic health.

Speakers at the three-daymeeting included Senator Frank Murkowski, Alaska Republican, who is sponsoring an import surcharge bill; Frank Morsani, former AIADA director and current chairman of the U.S. Chamber of Commerce; Rep. Matthew Rinaldo, New Jersey Republican, who is sponsoring a bill to eliminate the importation of gray-market cars, and Rep. Sam Gibbons, Florida Democrat, a strong free-trader who is chairman of the House Ways and Means Trade Subcommittee.

Toyota scholarships send students to Japan

TORRANCE, Calif.—A group of 15 high school students from across the country will have the opportunity to live and learn in Japan this summer through the Toyota Scholarship Program.

Youth for Understanding, a nonprofit student exchange organization, and Totota Motor Sales, U.S.A., Inc., joined forces in 1975 to start the cultural exchange program. The program is open to the children of the more than 47,000 employes of the nearly 1,100 Toyota dealers in the U.S., TMS/USA, its subsidiaries and distributors.

New Phoenix Motor Co. opens $6 million building

New Phoenix Motor Co.'s new $6 million building, along with additions to the original building next door, bring the Mercedes-Benz outlet's square footage to 80,000. The three-story contemporary-styled structure will bring the dealership's service bay total to 69 when all work is completed.

$50,000 celebration opens new building at Mercedes deal

PHOENIX.—At the official opening of New Phoenix Motor Co.'s new $6-million dealership building, 3,500 formally invited guests (including legislators and celebrities) dined and listened to a string portion of the Phoenix Symphony.

The evening's tab ran about $50,000 for Proprietor Chuck Theisen.

A rare 1956 300-S Mercedes convertible was displayed in the showroom during the gala and for the next few days.

The new building, along with additions to the original dealership building next door, bring the 40-year-old Mercedes-Benz outlet's total square footage to 80,000. Work on the additions is scheduled to be completed in June.

The dealership employs 150 people.

Thiesen, a trial attorney with the government, inherited the dealership and chose to expand in his present location rather than move to dealers' row in another section of town.

He visited dealerships in the U.S. and Europe looking for the right layout, then hired architects Ragnar C. Quale & Associates of Los Angeles, a firm that has designed 250 auto dealerships.

The new contemporary-styled building is three times the size of the old one. Hal Hammon, named service manager of the year for Mercedes-Benz of North America, said that with the 69 completed service bays, "we will have perhaps the largest set of service bays in the nation" and a 50,000-square-foot service department."

Customers bringing cars in for service are greeted by a hostess who serves coffee and doughnuts from 7 to 8:30 a.m. Four porters can run about 188 cars onto the roof area to await repairs.

Customers who wish to wait for their cars can relax by a fountain in a waiting area where reading material is available and where they may buy apparel and auto supplies.

After the cars are repaired, two quality controllers check the work. Cars leaving the service department are then washed and their interiors are cleaned, Hammon said.

Three days after a car has been repaired, Hammon makes certain that a clerk checks with the customer to see whether the repair job is holding up. This checking has produced only a 4-percent return for needed repairs, Hammon said.

Inmont building robotized lab for paint testing

SOUTHFIELD, Mich.—Inmont Corp. broke ground here last week for a $15 million robotized auto paint application laboratory.

J. Larry Jameson, senior vice president, Inmont worldwide automotive coatings, said that when it is completed early in 1986, the facility will become "the world's only robotized auto paint applications laboratory that's fully associated with an automotive finishes research center."

Known as the Inmont Applications Research Center, it will test the latest technology in coatings chemistry and paint applications. It will house two full-sized paint lines, one for spray and the other for electrodeposition of paints and coatings.

The plant will be dedicated solely to OEM coatings research. While most efforts will focus on the domestic auto industry, Jameson said work also will be done for foreign auto makers. He said Rolls-Royce and Jaguar are among Inmont's overseas customers. General Motors is Inmont's largest automotive customer.

According to A.W. Opipari, Inmont vice president—technology, the facility will duplicate what goes on inside an auto plant and will be able to handle full-size car and truck bodies.

"The facility was planned to simulate any assembly plant painting configuration now used or planned, including recent modular concepts," Opipari said. "This will enable us to evaluate any type of application system before the auto maker goes into design stages."

GM to use colleges to help train suppliers

DETROIT.—General Motors will set up training programs through universities to help its suppliers learn statistical process control (SPC) and other quality-producing techniques.

Last year, GM told suppliers they must have SPC in place on all new product programs at the start of the 1987 model year. The company previously has used the same college training procedure in Canada. Ford Motor Co. and Chrysler Corp. already have supplier SPC requirements in place.

C-P dealers donate

The Detroit Metro Chrysler-Plymouth Dealers Assn. has donated 241 infant safety seats to the Out Wayne County Head Start organization and Detroit Children's Hospital. Barbara Yageman, of Head Start, receives representative seats from Jim Riehl, left, C-P Dealer Council chairman, and Gus Russo, of the Metro C-P Dealer Assn.

Could be $3,000 per car in 1990, PH&H official says

Fleet penalty for sixes stressed

By Arthur Fiax
Automotive News Staff

CLEVELAND.—There are terrific cost savings opportunities for companies that choose to lease four-cylinder automobiles, W. James Noonan, executive vice president, client services, for Peterson, Howell & Heather, told a PH&H fleet management seminar here.

PH&H is a major fleet management and equipment leasing firm.

Noonan said, "Over a little more than two years, each six-cylinder engine will cost your company $541.80 more than a comparable four-cylinder car, and it will commit you increasingly to costs which are likely to grow at a rate much higher than both general inflation and the cost of the car itself."

A company that is committed to six-cylinder engines, he said, could be signing up for $3,000 in additional costs per car by 1990. In addition to the decreased fuel economy delivered by sixes, there is an increasing cost differential between four and six-cylinder engines.

In 1982, he said, a six-cylinder engine option on a Chevrolet Celebrity equipped as PH&H recommends cost $106. In 1985, that same option costs $285, and PH&H projects it will cost $350 in 1986.

"If you project those rates of increase out to 1990, you get some truly terrifying results," Noonan said. "The compound growth rate of six-cylinder prices between 1982 and 1986 was 34.8 percent. If we use that rate for the next four years, the price of a six in 1990 will be $1,155.65."

To emphasize his point, Noonan compared the prices of the BMW 318i, a four-cylinder car which costs $16,430, and the BMW 325e, which he claimed is essentially the same car with a six-cylinder engine and a $20,970 price tag. He also said there is a difference of some $4,000 between the Volvo 740-GLE (four-cylinder) and Volvo 760-GLE (six-cylinder).

"In light of this European example, a $1,000 spread doesn't seem unreasonable. We should expect it and plan for it," he said.

He added, "One has only to look at our own purchase orders to see that many companies have chosen to provide their drivers with six-cylinder cars—in most cases, because of pressure from the field for performance. We hope . . . it is clear that the continuation of an all-six-cylinder car selector will bring growing problems to the manager of that fleet: Long production cycles, early buildouts, and ever-escalating costs.

As an alternative for company drivers, Noonan suggested that companies offer options that equal the incremental cost of a six-cylinder engine in order to let the driver decide "whether power, image or comfort are most important in his lifestyle."

PH&H also presented its "Best Value Group Recommendations" for 1986 cars. Included were the Chevrolet Celebrity, Dodge Lancer, Oldsmobile Calais, Plymouth Caravelle and Pontiac 6000, all specified as models with four-cylinder engines. PH&H said the cars cost an average of $9,540 and get and average of 24.7 MPG.

A Runzheimer International fleet composition survey shows there is indeed a trend that indicates four-cylinder engines will become the most common U.S. fleet engine, although six-cylinder engines currently predominate.

In Canada, however, there is a trend toward the use of six-cylinder engines, according to the Rochester (Wis.) management consulting firm. The survey, conducted by the Runzheimer Reports on Transportation newsletter, showed that although downsizing from eight-cylinder engines has been slight in both U.S. and Canadian fleets over the last two years, when U.S. fleets downsize, they prefer four-cylinder engines, Canadian fleets prefer sixes. (Many fleets downsized from V-8s before 1983.)

According to the survey, use of four-cylinder engines in U.S. fleets from 1983 through 1984 increased from 33 to 36 percent. In Canada, four-cylinder fleet use has remained at 26 percent over the past two years, while the number of six-cylinder cars increased from 51 to 53 percent.

Both U.S. and Canadian fleets are shifting to front-wheel drive. From 1983 to 1984, front-wheel drive use in U.S. fleets increased from 41 to 46 percent and in Canada from 44 to 47 percent.

Fleet composition surveys from 1982 to 1984 also indicate that the number of imported cars in the average North American fleet is on the rise. Although the percentage of fleets with imports has dropped slightly—from 28 percent in 1982 to 27 percent in 1984—fleets with imported cars have markedly increased the number of cars from an average of 56 in 1982 to an average of 72 in 1984—a 29 percent jump.

Fleet composition data was gathered from more than 500 North American respondents in 1983 and 1984 representing some 250,000 fleet cars each year. In 1982, 95 fleets representing almost 80,000 cars responded.

Runzheimer also predicted that unleaded gasoline prices would rise this fall as a result of new EPA regulations, instead of remaining the same or dropping as they usually do. Because EPA regulations require refineries to reduce the lead in gasoline, there will be a period of gasoline marketing experimentation and a variety of gasoline blends on the market, Runzheimer predicted.

The use of ethanol and methanol as octane enhancers will become popular and refineries will also have to increase imports of blending compounds and crude oil from which octane enhancers can be made, Runzheimer said.

Canada will begin a lead-reduction program in 1987 and Runzheimer said that in both countries, the demand for high-octane unleaded gasoline and the changes gasoline producers will have to make will ultimately drive prices up several cents per gallon.

In a Runzheimer survey of 1,422 fleet managers, the cost of maintenance and repairs was the first concern of the group, ranking ahead of driver morale and vehicle disposal.

Of the executives surveyed, 29 percent named maintenance and repairs as the number one business car problem facing fleets in 1985, 19 percent named driver morale and 14 percent chose vehicle disposal.

Cost efficiency remains the number one fleet objective, as in years past. In 1985 it was ranked first by 49 percent of respondents. "Administrative ease" and "providing a fringe benefit value" tied as number two objectives.

Senate product-liability bill fails to win committee OK

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Senate efforts to pass a uniform product-liability bill stalled again as the Senate Commerce Committee voted not to send the measure to the Senate floor. The bill will now be tied up in a new round of committee hearings before another vote is taken.

Auto manufacturers have supported passage of the bill since they—like all other businesses that engage in interstate commerce—currently face differing product-liability standards in each state.

The committee split its vote with eight members for the measure and eight against. Senator Wendell Ford, Kentucky Democrat, followed his usual practice of not voting on measures impacting insurers.

The defeated bill is essentially the same as a measure that cleared the Commerce Committee in the last Congress. The only major differences are that a provision limiting punitive damages has been dropped and language has been added to keep the bill from preempting state environmental laws.

Both changes were intended to make the bill more acceptable to federal product-liability opponents.

In recent weeks, however, Senators Slade Gorton, Washington Republican, and Christopher Dodd, Connecticut Democrat, have begun a push for establishing a separate federal mechanism for awarding compensation to victims of hazardous products.

Those so-called "no-fault" compensation programs have generated interest among lawmakers who are currently reluctant to support uniform product liability.

Business groups that support the product-liability bill have expressed opposition to such a plan, however, and the Reagan Administration has tended to view the proposals as creating new and unwanted federal responsibilities.

Before the committee voted not to report the product-liability bill, Commerce Committee Chairman John Danforth, Missouri Republican, and Senator Robert Kasten, Wisconsin Republican, the bill's sponsor, agreed to hold hearings on the question of a "no-fault" compensation plan. But both senators argued for committee passage of the product-liability measure with the proviso that a full Senate vote would not be held until the compensation issue had been dispensed with in committee.

Aside from White House and business reluctance to support the compensation idea, a principal reason for the Danforth-Kasten maneuver was that inclusion of a compensation package could necessitate referal of the entire liability package to the Senate Judiciary Committee, where its future would be even more uncertain than in the Commerce Committee.

For that reason, the failure to win Commerce Committee approval for the original proposal could be described as a major defeat for the product-liability reformers.

Gray-market importer faces 35 counts

U.S. grand jury indicts Mardikian

By Jake Kelderman
Washington Reporter

WASHINGTON.—Albert Mardikian, owner of Trend Import Sales and Albert Mardikian Engineering, Orange County, Calif., has been indicted by a grand jury on 35 counts of mail fraud and providing false information to the government.

The charges were brought against Mardikian by the U.S. Attorney's office in Los Angeles on behalf of the EPA and the Justice Department.

If convicted, Mardikian could receive a maximum fine of $190,000 and face up to five years imprisonment on each count.

For several years, Mardikian has specialized in bringing into the U.S. and modifying for use cars from Europe not otherwise available here. According to the EPA, Mardikian has modified and tested more than 2,000 gray-market vehicles, primarily Ferrari, Mercedes-Benz and BMW models. According to the indictment, not all those cars complied with EPA regulations.

EPA had been investigating Mardikian for a number of years. In 1983, it removed his laboratory from its list of labs permitted to conduct federal test procedures for exhaust emissions compliance after independent analysis showed that test results from his facilities were "unreliable and lacked integrity."

At the same time, the agency rejected Mardikian's test documentation for approximately 500 imported vehicles. EPA sources said the indictments were an outgrowth of those earlier investigations.

"This is the first indictment against a major automobile modifier and testing facilities for submitting false emissions test results," said EPA Administrator Lee Thomas. "We also are investigating the activities of other gray-market importers, modifiers and dealers in California and elsewhere in the country."

The indictment against Mardikian alleges that he and his nephew, Garo Mardikian, joined in a scheme to submit dummy emissions test results without conducting the tests and that they then submitted the results to the U.S. Customs Service so the cars might be released for use in the U.S.

The indictment charges them with 10 counts of mail fraud and Albert Mardikian himself with seven other counts of mail fraud and 18 counts of knowingly making false statements to the Federal Government between June, 1981, and April, 1984.

Thomas said the action against Mardikian was part of the agency's expanded program to investigate the gray-market importers.

Last year, in response to the strong dollar and continued high U.S. prices for high-performance and luxury European cars, the gray market in such vehicles grew to more than 30,000 units here, federal records show.

A watch for a test drive

Tel Gill, left, sales manager at Century Ford, Inc., Delran, N.J., gives a watch to a prospective customer who took a trial drive in a car during an inventory reduction sale. The dealership sent out letters about the sale and holders of letters who took a test drive had a choice of a free 35-mm camera or a watch.

U.S. study gives imports 36 pct. of market in 1988

Continued from Page 1

estimated at 10.7 million in 1985, 10.7 million in 1986, 10.9 million in 1987 and 11.2 million in 1988.

When asked what the lost market share of U.S. producers would mean in terms of American jobs, Watkins estimated that 100,000 jobs would be lost at the manufacturer level and he conceded that changes in production technology would add to that figure.

The OEM group, which included such firms as Borg-Warner, TRW, Rockwell International, Kelsey-Hayes and United Technologies, asked whether the department had figures on the impact this would have on the supplier industry. They were told that no precise figure was available, but that estimates ran as high as an additional 400,000 dislocated workers.

Watkins was also queried on what basis the Administration predicted an 11-million-plus car year in 1988. He said the White House does not foresee a recession during the remaining years of the Reagan presidency, but that if one were to occur the figures would have to be revised.

If car sales do rise in the manner predicted by the Commerce Department through 1988, it will be the longest sustained sales increase (six years) since the infant days of the U.S. auto industry.

A breakdown of the Commerce Department numbers shows Japanese vehicles leading the import pack with a market share of 20.5 percent or 2.2 million cars in 1985, 24.3 percent or 2.6 million cars in 1986, 25.9 percent or 2.825 million cars in 1987 and 27.5 percent or 3.075 million cars in 1988.

A portion of this growth is expected to come from captive imports brought in from Japan for sale through GM and Chrysler showrooms. The Commerce Department estimates sales of 175,000 captive imports in 1985 (up from 105,000 last year), 250,000 in 1986, 325,000 in 1987 and 400,000 in 1988.

The 400,000 units projected for 1988 do not meet the announced needs of GM and Chrysler. In 1988, captive imports from Japan will hold an estimated 3.6 percent of the U.S. market, the department said.

While U.S.-built Japanese cars are expected to account for an ever-larger portion of U.S. sales, Korean-built autos will also begin carving a slice from the U.S. market, Commerce figures show.

Sales of Korean-manufactured cars are projected at 15,000 this year as Hyundai enters the market. The number is seen rising to 75,000 in 1986, to 190,000 in 1987 and to 240,000 in 1988. Along the way, Daewoo, the GM affiliate, will join Hyundai in the U.S., and Ford will begin importing cars from Kia.

Smaller increases are projected for European imports. From 534,000 in 1984, they are seen growing to 575,000 in 1985 but slipping to 560,000 in 1986. They are expected to climb back to 575,000 in 1987 and to 610,000 in 1988.

obituaries

Albert M. Weiss Sr.

GM expands new program of ad buying

Continued from Page 3

on any given publication."

Each division will still be billed through its own agency.

The emerging new system is the result of a study by consulting firm McKinsey & Co. for the GM Media Council.

The thrust of the new media-buying system is to save money by maximizing combined buying clout.

There is some skepticism about the new system within both the print and TV media.

"It really is too soon to tell how it is all going to shake out," one media source said last week.

"It very well could be that they (GM) have jumped into the pool and now they have to learn how to swim."

GM declined to discuss the matter further last week, reiterating that the work of the Media Council is ongoing.

The preliminary TV shuffling gave Campbell-Ewald buying responsibilty for sports in addition to its creative work for Chevrolet. D'Arcy MacManus Masius became negotiating agency for news in addition to its creative work on the Pontiac and Cadillac accounts, while Leo Burnett Co., Oldsmobile's ad agency, received responsiblity for prime-time buying.

Mid-May sales explode after early-month droop

Continued from Page 1

from 28,350 a year earlier. Highest rate so far this year was 35,905 for Feb. 21-28.

The 18.08-percent increase over last year in mid-May followed a disappointing 8.61-percent year-to-year decline in the first 10 days of the month. Actual sales for May 11-20 were some 50,000 units above the May 1-10 period when, in fact, incentives already were in place.

Ford enjoyed the largest year-to-year increase, up 24.39 percent, to 62,803 from 50,489. Chrysler was only slightly less spectacular, up 22.07 percent, to 33,503 from 27,445. General Motors, with lower interest rates on at least one car line in each of its five divisions, reported sales of 163,425, up 16.79 percent from 139,925.

AMC released a sales estimate for the period of 3,000 cars, down 32.58 percent from 4,450. Volkswagen was up 6.17 percent, to 2,066 from 1,946, and Honda edged past its year-ago number by only plus 2.75 percent, up to 2,612 from 2,542. The Automotive News estimate for U.S.-built Nissan Sentras was 400 cars this year. There were none built here a year ago.

GM, of course, had the largest piece of the market. Its 61.02 percent, while better than other periods this year, was down from 61.70 percent last year. Ford climbed to 23.45 percent from 22.26 percent. Chrysler was up to 12.51 percent from 12.10 percent.

AMC lost considerable ground, falling to 1.12 percent from 1.96 percent; VW was down to 0.77 percent from 0.86 percent; Honda dropped to 0.98 percent from 1.12 percent, and Nissan captured 0.15 percent of the mid-May market.

Domestic makes with sales increases included Chrysler, up 41.66 percent; Plymouth, up 4.93 percent; Dodge, up 19.24 percent; Ford, up 38.62 percent, and Mercury, up 1.26 percent.

GM's Chevrolet was up 36.79 percent, Cadillac was up 20.01 percent, Oldsmobile was up 13.99 percent and Pontiac was up 15.65 percent.

Buick failed to match its year-ago number, falling 11.25 percent. Lincoln was down 4.70 percent, AMC dropped an estimated 20.00 percent and Renault slipped 34.18 percent.

VW was up 6.17 percent and Honda was up 2.75 percent.

Strike settled in Sweden; Saab, Volvo unhurt

STOCKHOLM.—Volvo and Saab managed to go through Sweden's worst civil service strike without any serious disruptions of production.

The conflict ended May 20 after nearly three weeks of import and export blocking through strikes and lockout actions that affected most harbors and all regular international air traffic.

Both auto makers were on the verge of having to lay off personnel and cut production because of a shortage of vital components. Exports had been kept up by shipping cars and spare parts through any outlets not closed, including Norwegian harbors and airports.

Volvo and Saab agreed that improvisations to keep the wheels running in spite of an increasing shortage of fuel-injection equipment had made production extra costly during the strike, although the makers were not prepared to mention any figures.

As for production figures, Volvo reported no losses while a Saab spokesman admitted that some cars may have been lost through production running a little on the slow side on certain occasions. Making up such losses will be difficult since Saab already is using all its production capacity.

The strike and the resulting lockout action involved vital personnel in administration and among Customs officers and air traffic controllers, paralyzing Swedish society in general and industry in particular.

The settlement came after intervention of Olof Palme, Sweden's prime minister, who no doubt realized that continued trouble would seriously hurt his government's chances of being reelected in September.

Timetable for diesel particulates speeded

Toxic chemicals bill includes autos

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A bill to control the release of toxic chemicals into the air deals specifically with gasoline and diesel emissions through their use in motor vehicles.

The House effort, mounted primarily as a son-of-Bhopal bill to deal with chemical plant toxic emissions, repeals the section of the Clean Air Act that concerns fuel and fuel additives on grounds that EPA was not doing the job ordered. It takes another approach and deals specifically with diesel particulate standards.

The chief House sponsor is Rep. Tim Wirth, Colorado Democrat, whose home town has the "brown smog" problem.

Joining him are Rep. Henry Waxman, California Democrat who is known as House's Mr. Clean, and Rep. James Florio, New Jersey Democrat and author of the Superfund legislation which mandates cleanup of toxic waste dumps.

The bill will undoubtedly pick up steam but it may run into trouble with House Energy and Commerce Committee Chairman John Dingell, Michigan Democrat, who once before opposed tightening emission standards for heavy-duty trucks. So far, there is no Senate equivalent.

House hearings start June 3, probably with chemical companies or manufacturers using toxic chemicals. The auto industry's turn to discuss toxic emissions from tailpipes of gasoline-powered or diesel-powered vehicles will come soon thereafter.

The section on diesel particulates takes EPA or, in some cases, California standards and would put them into effect earlier. For example, the bill would make diesel particulate standards of 0.2 grams per mile effective for 1986 and 1987 cars, and the standard of 0.26 gpm would apply to 1986 and 1987 light-duty trucks.

Despite this language, Congress is unlikely to make it in time for the 1986 models. EPA would make those same standards effective for 1987 models.

The bill would mandate 0.08 gpm for cars and light trucks for 1988 and later models. This is the California standard for 1989 models.

Under the bill, the 1990 and later heavy-duty-engine or vehicle diesel particulate standard would be 0.10 grams per brake horsepower-hour. The EPA heavy-duty standard is 0.25 for 1991 models and 0.10 for 1994 models.

The final diesel particulate requirement in the bill would require all light- and heavy-duty vehicles and engines made during or after the 1995 model year emit no more than gasoline-powered light- and heavy-duty vehicles and engines.

The bill would also mandate proposed regulations for fuel or fuel additives on a speeded-up schedule, and it would ban lead or lead additives in gasoline after Dec. 31, 1986. The EPA schedule is a phase-down to 0.5 grams per gallon by July 1, 1985; then to 0.1 by Jan. 1, 1986, and a proposed ban by Jan. 1, 1988.

The bill lists several hazardous substances in vehicles: Asbestos (used primarily in aftermarket brake linings which EPA proposes to regulate); lead (already being phased out); ethylene dibromide (occurring only in leaded gasoline), and benzene (which is contained in small amounts in gasoline).

In addition, the bill contains a list of 83 substances considered hazardous, including many that appear in gasoline. The preferred method, according to the bill, is to deal with them at the source. This means handling them as fuel and only secondarily as coming from the tailpipe of vehicles either into the car's interior or into the air.

The auto makers could also be affected to some extent by toxic emissions in the manufacturing process, but they would be far less affected than the chemical companies that process such substances as cadmium or beryllium.

In a separate action, Waxman expressed some optimism about starting to move on reauthorizing the Clean Air Act, which has not been reauthorized for some three years. Doing this would get into the sticky wicket of acid rain—and, inevitably, the contribution of nitrogen oxides from cars and trucks.

While the outlook in the House is cloudy, the scene is brighter on the Senate side where hearings on reauthorizing the Clean Air Act are to be set in June or July.

AMC situation is serious, but solvable

Continued from Page 45

quest to begin bargaining, demanding blanket approval of the concessions.

It is very difficult for the union to do that and save face. The question, then, is why wouldn't the company at least agree to go through the motions of negotiating?

The answer seems to be that AMC will not talk unless it has a firm commitment that the new agreement will include those points. The company maintains that there is nothing to negotiate on those demands. That may be some of the French influence.

Since Milwaukee has now agreed to the commitment, it may be able to begin talks soon.

"It is a difficult and trying situation," Majerus said. "In the past, we have been able to work out other trying relationships with American Motors which threatened continuing operations in Wisconsin.

"We are working and will continue to work at trying to find answers to difficult questions. There are no easy answers. The situation is very complex and requires the cooperation of everyone concerned—the company, the local unions, the international unions and the community.

"We are sure that all participants involved will make every effort to continue operations in Wisconsin despite the fact that the plant-termination notices have been served."

Peugeot cuts its loss in half

PARIS.—Peugeot S.A. reported that it cut its losses in 1984 by more than half despite a "very brutal drop" in domestic sales and a slight decline in other European markets.

In 1984, the auto group, which builds Peugeot, Talbot and Citroen models, posted a loss of $257.1 million. The company said Peugeot and Talbot were in the black for 1984, while Citroen remained in the red.

Peugeot said it hopes to show a profit this year, although "1985 is far from being without uncertainties," particularly in the European market.

Memorial Day weekend is the reason

No Saturday overtime; output dips

By Louise Kertesz
Detroit Reporter

Estimated domestic auto production was off last week because plants did not work on the Saturday before Memorial Day. The 168,978-unit build was 7.15 percent less than the previous week's 181,995.

All assembly plants are closed for Memorial Day today (May 27).

Last week's output was 9.38 percent better than the year-ago week's 154,490 (also a holiday period).

So far this year, 3,578,873 cars have been assembled, 2.68 percent more than the 3,485,368 completed last year at this time.

Companies accounted for last week's scheduled production as follows: General Motors, 57.77 percent; Ford Motor Co., 19.64 percent; Chrysler Corp., 16.22 percent; American Motors, 2.16 percent; Honda of America Mfg. Co., 1.85 percent; Volkswagen of America, 1.39 percent; New United Motor Mfg. Co., 0.59 percent, and Nissan Motor Mfg. Co., U.S.A., 0.38 percent.

During the week ended May 18, a shortage of acceptable parts halted Capri production at Ford's Dearborn plant for the second consecutive week.

AMC will cut production of the Alliance and Encore at Kenosha from 730 units a day to 550 beginning in July.

All Ford plants are scheduled to work daily overtime this week.

Ford's Chicago and Lorain (O.) plants are slated to work overtime Saturday, June 1.

Chrysler's Belvidere (Ill.) and St. Louis (Nos. 1 and 2) plants are scheduled to work two nine-hour daily shifts this week.

Chrysler's Jefferson (Detroit) plant will operate two 8½-hour daily shifts this week.

Chrysler Dayton agreement pays less to new workers

By Marjorie Sorge
Labor Editor

DETROIT.—Chrysler Corp. and the International Union of Electrical Workers (IUE) have negotiated a five-year labor agreement at the Dayton plant which pays new hires 57 percent of the full rate.

The new pact covers 1,750 hourly workers at the Dayton plant, which makes air conditioners, heaters, oil coolers, condensers, heater assemblies, compressors and plastic injection moldings. It supplements the IUE-Chrysler master agreement.

Those components are very competitive on a world basis.

The new-hire rate will affect only production workers. Skilled trades rates will be the same for new hires as they are for current workers, said Thomas W. Miner, Chrysler vice president, industrial relations.

New-hire rates for production workers will increase to 73 percent of the curent full rate after five years. After the fifth year, wage increases will be paid as semi-annual bonuses. New hires reach full wage rate after 10 years.

Chrysler has no projections on how many new hires there will be in the next five years, said Frank Valle, director, industrial relations. He said it will depend on how many people leave or retire and how much new work can be attracted.

There are no provisions for wage or cost-of-living-allowance (COLA) increases during the 10-year period, other than the established wage progression and bonuses, Miner said.

"We expect the reduced labor costs to put the plant in a better competitive position in the future to retain its products and to acquire new business," he said.

New hires will also have phased-in benefit plans.

In an effort to create some of those new jobs, the agreement also provides incentives for employes to quit their jobs voluntarily or to retire if eligible. Employes on roll prior to the agreement can leave their jobs and receive cash incentives ranging from $10,000 to $35,000, depending on length of service.

There is also a $6,250 cash incentive for retirement at the company's option or $12,500 at the employe's option.

The contract expires March 29, 1990.

Chrysler and the UAW will begin negotiations on a new contract this summer. That agreement expires Oct. 15.

The IUE and General Motors have negotiated similar but not identical contracts at several locations.

Truck production running 9 pct. ahead of 1984

With no Saturday overtime scheduled because of the holiday, domestic truck makers planned assembly of 70,686 units last week, 6.70 percent less than the previous week's 75,760 but 10.54 percent more than the year-ago week's 63,948 (also a holiday period).

Assembly plants are closed today (May 27) for Memorial Day.

So far this year, 1,422,069 trucks have been assembled, 9.18 percent more than the 1,302,465 built last year at this time.

American Motors' Jeep plant in Toledo lost part of a day's production the week ended May 18 because an outside contractor cut through a power line.

All Ford plants are scheduled to work daily overtime this week.

Ford's Kansas City, Norfolk, Twin Cities and Louisville plants are slated to work overtime Saturday (June 1).

Chrysler Corp.'s Warren (Mich.) plant is scheduled to work two 9-hour daily shifts this week.

Victoria Day brings drop in Canadian output

With assembly plants closed last Monday (May 20) for Victoria Day, last week's Canadian car production of 21,035 units was down 3.55 percent from the previous week's 21,809.

Canadian production was also slowed during the prior week, since all plants except those in Quebec were idle Friday (May 17).

The past two weeks' auto production fell below 22,000 a week for the first time since the mid-April holiday period.

Last week's output was 2.40 percent below the year-ago week's 21,553 (also a holiday period).

So far this year, 421,221 cars have been assembled, 9.82 percent fewer than the 467,074 completed last year at this point.

This year's car production has been running 10-15 percent behind 1984's since mid-March. The production lag has been more than 10 percent during every week but five this year.

Truck makers scheduled a build of 15,494 units last week, down 2.68 percent from the previous week's 15,921 and also down 5.03 percent from the year-ago week's 16,314.

Year-to-date, 369,094 trucks have been assembled, 6.71 percent more than the 345,871 completed last year at this time.

State vehicle purchases rise

SACRAMENTO.—Car buyers in California purchased $19.3 billion worth of new vehicles during 1984, a 21-percent increase over the 1983 purchases, according to the State Board of Tax Equalization.

Chevy looks ahead

Jim Dunne

C-10 pickup for 1987

Chevrolet's C-10 full-sized pickup truck will have a new cab and an advanced braking system for 1987. The front end is more rounded; the hood slants downward, and the doors open a few inches into the roof. The C-10 will have a non-locking braking system for the rear wheels. In emergency stops, the rear wheels will continue to roll while the brakes are applied so the vehicle tracks in a predictable path.

But loss of investment credit would hurt industry

Tax plan may hike sales

By Edward Lapham
Marketing Editor

The Reagan Administration's "revolutionary" proposal to reform the U.S. tax code could well be just that for the U.S. auto industry, according to industry analysts.

Although there is a consensus that "it's too soon to tell" exactly what will come of the Congress-altered proposal, there are some likely ramifications:

1. The elimination of investment tax credits could curtail the domestic industry's five-year, $80 billion spending plans.

That would seriously undermine efforts to improve productivity and competitiveness with Japanese car makers.

2. The high-profit, big-ticket upper end of the car market could soften as high-end buyers, faced with restricted depreciation and interest-payment deductions, "shop down" to shift personal and business expenditures.

That would alter marketing game plans at General Motors, Ford Motor Co. and Chrysler Corp., as well as among European importers, all of which have aimed marketing campaigns squarely at the "yuppie" buyer most likely to be adversely effected by the new proposals.

3. At least in the short term, the additional pop in disposal income at the low end of the market could increase sales. Sustained growth in this under-$10,000-sticker-price segement could bring the car sales trendline back to a pre-1978 trajectory.

• However, this is the end of the market where U.S. producers have been least competitive. Combined with more imports of Japanese cars, the new investment disincentives and pass-through of tax-burden cost increases, this could mean a further erosion of domestic penetration.

"The current price structure has forced maybe one-third of the U.S. population out of the new-car market," said Arthur G. Davis, auto analyst for Prescott Ball & Turben.

"The proposal may allow many low-end buyers to come back into the market."

Davis said the poor fuel economy of the extant older models also provides a low-end purchase incentive.

"In addition, the average vehicle age is the highest, and the scrappage rate the lowest, in 20 years," he said.

"This all creates a backlog of demand and could add a million units over the 1986-1987 period, adding up to a 12-million-unit

Tax change may reduce dealer costs

By Edward Lapham and Jake Kelderman
Automotive News Staff

The complete impact of President Reagan's new tax plan on auto dealers is still unclear, but "on average," it looks like new-car dealers will be able to reduce their tax bills.

"We don't know exactly what will be enacted, but it looks like dealers will benefit," said Larry Hahn, of Midwest regional CPA firm Plante & Moran.

Hahn, a tax department manager who specializes in dealership tax returns, said that it looks like "the larger the dealership, the less the benefits will be."

He said larger dealerships, with more complex operations like leasing companies, will not benefit from reduced surcharge rates.

Officially, NADA had no response to the proposed tax-code changes. The group is preparing sample income tax returns for different size dealerships in preparation for House Ways & Means Committee hearings.

"We're still analyzing the potential impact," a spokesman said.

However, according to some internal NADA sources, the graduated corporate tax rate sched-

Search for designers raises immigration problems

Engineering has own 'boat people'

By Dan McCosh
Detroit Reporter

The fast-growing internationalization of Detroit's once-insular engineering community has reached the point that engineering recruiters are running afoul of U.S. immigration requirements, Automotive News has learned.

The situation has even created a small group of countryless, high-tech "boat people" anxious to work designing American cars, but unable to clear immigration hurdles.

In isolated cases, foreign auto designers and engineers recently have been sent home, denied U.S. work visas and denied extensions, according to various industry sources.

Negotiations over the work visas have made both recruiters and the immigration officials sensitive about discussing the topic, but Automotive News has learned that General Motors on one occasion approached Canadian immigration officials in an effort to station in that country some foreign engineers and designers who have been denied U.S. work permits.

The immigration snafus stem from a relatively unnoticed shortage of auto designers and engineers that has emerged during Detroit's latest sales boom. New-car development aiming at the late 1980s has created a severe shortage of trained engineers and designers in Detroit, in stark contrast to the wholesale layoffs of designers and engineers that took place in the late 1970s.

The shortage has created a boom for independent engineering companies, has stretched domestic auto makers' recruiting efforts and has prompted a flood of trained European designers coming to Michigan.

Some indication of the number of technical immigrants coming to Michigan, primarily from Britain, is revealed by figures from the Michigan Employment Security Commission, which said about 900 applications for immigrant work visas in auto-related technical fields have been granted or renewed in Michigan alone since 1981.

These are mainly additions to the pool of designers that create and finalize new-car designs, a field that currently employs 20,000-30,000 in the Detroit area.

Employers in the field, both do-

Renault chief Besse to head Car Division

By Jean-Jacques Renaux
Special Correspondent

PARIS.—Georges Besse, the "president-directeur general" of Renault, personally took the reins of the Car Division last week, removing Pierre Semerena in the process.

Semerena, who had been appointed to the job by former President Bernard Hanon last December, becomes a "directeur-general adjoint" at Renault. It is not yet clear what his duties will be.

The change occurred a few days after a general board meeting at Renault, in which nothing very new was revealed on the company's situation or about Besse's plans to turn it around.

As Renault's losses are still reportedly running at some 30 million francs a day ($3 million-plus), another, extraordinary, board meeting will be held June 17. At that meeting, Besse is expected to announce a plan to reduce the company's workforce.

According to the Financial Times, that plan calls for Renault to lay off 18,000 workers in the Car Division by the end of 1986—10,000 this year and 8,000 next year. Reuter's news service put the two-year number at 21,000, and unofficial reports in Europe have made the number as high as 23,000.

These will be voluntary retirements and incentive-prodded resignations in an attempt to repatriate foreign "guest workers."

Renault had 98,000 employes in the Car Division at the end of 1984.

The newspaper reported that

MVMA prepares to name president

WASHINGTON.—On the agenda at the MVMA annual board meeting, to be held here Wednesday (June 5), is appointment of a successor to President V.J. Adduci, who retires June 30. It is believed Thomas H. Hanna will be named president and CEO. Hanna, 51, is senior vice president of MVMA, on loan to Traffic Safety Now, Inc., where he has been serving as president.

GM, Ford add truck incentives

DETROIT.—General Motors has extended 8.8 APR financing to Chevrolet C-10 and C-20 plus GMC C-1500 and C-2500 full-size pickup models. The program has a 48-month cap and runs June 1 to July 31. Ford has an "Aloha Hawaii" sales managers' travel contest which started May 15 and ends July 15. The program includes light- and medium-duty trucks through the 800 series, excluding B-series.

Chrysler negotiating to acquire Gulfstream

By Michelle Krebs
Financial Editor

Chrysler Corp. said last week that it is holding discussions to purchase Gulfstream Aerospace Corp., a manufacturer of corporate and military aircraft and military surveillance equipment.

Chrysler said it was granted a six-month option to purchase 6.7 million shares—about 20 percent of Gulfstream's outstanding shares—for $19 a share, or $127 million, from Allen E. Paulson.

Paulson is Gulfstream Aerospace's chairman, president and chief executive officer. He owns about 71 percent of the company's stock.

The two companies are continuing discussions, which have been going on for several months, for a complete buyout by Chrysler. The purchase would provide Gulfstream's public stockholders with $19 per share, Gulfstream Aerospace said. That would bring the total package to about $636 million.

Chrysler would create a new subsidiary and merge Gulfstream Aerospace into it.

Gulfstream Aerospace, based in Savannah, Ga., employs 3,500 people. Most work at its Georgia facilities though the company also has operations in Bethany, Okla.

Gulfstream Aerospace was part of Grumman Corp., a major aerospace corporation, until 1978 when it became a separate company in a leveraged buyout. The company went public in 1983.

For 1984, Gulfstream Aerospace reported a profit of $34 million, which included a $26 million write-down for its discontinued Aero-Commander aircraft. Sales amounted to $600 million.

A Chrysler spokesman said the auto maker believes Gulfstream Aerospace's expertise in aerodynamics, avionics and electronics will be applicable in Chrysler's automotive operations. Additionally, it will be an asset as a profitable company on its own, he said.

A merger with Gulfstream Aerospace also fits into Chrysler's strategy to become more high-tech oriented. Chrysler Chairman Lee Iacocca told shareholders at the company's recent annual meeting tha Chrysler was poised for acquisitions and affiliations to gain

Our only salvation, Smith tells stockholders

High-tech century ahead for GM

By Michelle Krebs
Financial Editor

The General Motors of the 21st Century will not be a conglomerate of unrelated pieces but will be a company of pieces linked by the latest technology, GM Chairman Roger B. Smith told shareholders at the company's 77th annual stockholders meeting in Detroit.

Calling technology "our only salvation," Smith said GM plans to continue acquiring and making investments in companies to gain technology for its future needs.

"The General Motors we're building is roughly comparable to the structure of an atom, in which individual parts are very important—but they're held together by a very strong affinity, and it takes all of them to make up the united whole," he said.

Smith said GM will expand to non-traditional, but still-related, markets when its strengths lead in that direction. Yet, he added, GM will make an acquisition or enter a new field only if GM can contribute technical knowledge or expertise.

"There must be a natural synergy between GM and its acquisitions. Being a conglomerate of unrelated businesses has no special attraction for us—it's not part of our strategy," he told shareholders during the five-hour meeting.

"And once we do acquire a new company, we're going to make sure that it retains the independence, freedom and entrepreneurial vitality that attracted us in the first place," he added.

"After all, we're not just adding look-alike boxes to an organization chart. We're creating integral pieces of a 21st Century company."

Despite repeated inquiries from shareholders and the press, Smith would not confirm if one of those integral pieces would be the privately held Hughes Aircraft Co., which recently went on the auction block.

Smith said potential buyers who obtained the bidding package are not allowed to discuss Hughes until six months after completion of the acquisition, whether they bid or not.

GM is believed to have bid a package of cash and securities amounting to as much as $5 billion. It further is believed that GM may create a special class of stock for the Hughes purchase, as it did with the recent purchase of Electronic Data Systems, Inc.

Nevertheless, Smith reiterated that Hughes Aircraft is attractive because of its position in the forefront of defense electronics.

"Their technology is way out on the leading edge, and I personally believe a lot of the value added to cars in the next 10 years will be in electronics," Smith said.

GM may well make further acquisitions in the financial services field if an opportunity arises that would allow GM's financial subsidiary, General Motors Acceptance Corp., to use its technology and expertise while producing a profit, Smith said.

GM recently purchased the Colonial Group, a group of Philadelphia-area mortgage companies, and the rights to service the mortgage portfolio of Norwest, Inc., of Minneapolis. Those acquisitions make GMAC the nation's second largest mortgage services business.

Despite speculation to the contrary, Smith said GM does not plan to open a hospital but plans to continue aggressive marketing of EDS' health-care services.

He also said that while GM hopes to increase substantially its defense and government business, it would not make an acquisition based solely on a company's military business. Rather, an acquisition candidate would have to have high-technology applications.

Smith said GM is agressively bidding on government contracts including a nine-year contract with the U.S. Postal Service to

Stockholders scarce after profitable year

The auditorium at the Fisher Building, across the street from General Motors headquarters, was far from filled during the nearly five-hour annual meeting.

Japanese let quotas fade away in Canada

By Richard Johnson
Detroit Reporter

Japanese auto makers will not limit their 1985 exports to Canada to 1984 voluntary quota levels, but Japan's Ministry of International Trade and Industry (MITI) has vowed not to permit a flood of cars into the country.

Voluntary restraints expired March 31 and since then Canadian officials have sought a long-term agreement tying import levels to more investment in Canada by Japanese manufacturers. So far, no agreement has been reached, and MITI has rejected a continuation of 1984 terms.

Meanwhile, the Canadian Government has promised to keep a close on eye on Japanese shipments and continue to work toward a lasting agreement.

"What we've told the Japanese is that we do not want the Canadian auto industry and import market disrupted," said Denis Comeau, of the Department of International Trade in Canada's Ministry of External Affairs.

The voluntary limit restricted Japanese companies to 170,400 cars for the year ended March 31, or no more than 18 percent of the passenger-car market. A ceiling on the Japanese share of the Canadian market was established in 1981. Japanese auto makers had previously taken as much as 22 percent of auto sales in Canada.

MITI has reportedly affirmed that there will be no torrent of cars unleashed on the Canadian market. Representatives of Japanese dealers in Canada have predicted that imports will rise to 200,000 to 210,000.

"We are monitoring very closely," said Comeau. "Should the situation get out of hand—and I can't put a figure on what level that would be—the ministers would take appropriate measures."

He said the government has a variety of options if Japanese imports climb to unacceptable levels, including imposition of a quota.

Besides spurning a new round of voluntary quotas, MITI has said it will leave foreign investment decisions to Japanese auto manufacturers. Canadian officials have complained that while Japanese companies have invested an estimated $5 billion in the U.S., investment north of the border has been in the range of only $100 million to $125 million.

Honda Canada, which will construct a $100-million car plant in Alliston, Ont., near Toronto, is the lone Japanese company with plans to build assembly operations in Canada.

Despite the setback, Comeau said representatives of the two governments will continue talks, but no timetable for reaching a settlement has been established.

"Our objective is to try to arrive at a long-term agreement," he said. "We'd like to see the Japanese increase their investments. The hope and intention of our ministers is to get a settlement, but no time frame has been set."

Car-type belt rules sought for HD units

WASHINGTON.—NHTSA has proposed a rule that would toughen safety-belt standards in heavy-duty vehicles. The proposal would require belts similar to those now found in autos.

The new rule would apply to trucks, buses, and multipurpose vehicles with GVWs of more than 10,000 pounds.

It would standardize the push-button buckle release for all vehicles. It also would require an emergency locking retractor.

NHTSA said the changes would make safety belts in heavy-duty vehicles easier to use, thereby promoting greater use.

The proposed rule also is intended to help drivers comply with the Bureau of Motor Carrier Safety requirement that safety belts be used in trucks and buses engaged in interstate commerce and with mandatory belt-use laws in some states.

NHTSA said the experience of the United Parcel Service leads the agency to believe the changes could raise belt usage among drivers of heavy trucks from the current 6 percent to 15 to 20 percent.

That could eliminate 40 to 60 fatalities annually and reduce injury severity in as many as 12,000 accidents each year, NHTSA said.

NHTSA estimated the r[illegible] quirements would add $[illegible] to $7 million to th[illegible] heavy-duty vehicle f[illegible] year.

Viewing experimental 4WD Dodge Daytona

Prospective mechanics representing Atascadero and Vista High Schools in the Califc nia finals of the Plymouth/AAA Trouble Shoot contest get a peek at an experimental four-wheel-drive Dodge Daytona while touring the Chrysler Shelby Performance Center, Santa Fe Springs, Calif. Scott Harvey, manager of the center, points to the torque splitter developed to transfer power from the transverse-mounted engine to the rear wheels. With Harvey are, from left, Scott Curran, Jeff Cossey, Erik Groscup and Alan Mortenson.

California-only Camaro downplays IROC heritage

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—California marketers a decade ago put stripes on cars and called them "California packages."

What goes around comes around because Chevrolet has announced that it is introducing a California-only version of the Camaro IROC-Z that leaves off the stripes, decals and louvers. That analogy is not lost on Edd Roggenkamp III, Chevrolet's California marketing manager, who chuckled and said, "That's been pointed out by several people. But, that's the perception of what will sell here and I live here.

"We've noticed that high-performance buffs in California don't always like to advertise the fact they're driving a high-performance car, so this version of the IROC-Z has a more subtle paint treatment, no fake louvers on the hood and no decals. It's very clean looking."

About 500 of the IROC-Zs will be sold and the price will remain at the same level, starting around $13,500.

A companion California-only model based on the Cavalier also has been introduced. Equipped with a port-injected 2.8-liter V-6, the four-door sedan receives a blacked-out grille and window moldings, similar to the Euro-Sport Celebrity, and a heavy-duty suspension with 14-inch aluminum alloy wheels. The car will also have an uplevel interior, AM/FM stereo, air conditioning and sunroof. The price will be in the $11,000 to $12,000 range. Roggenkamp said about 1,000 of the Cavalier California packages will be built.

The 2.8-liter V-6 was originally slated as an option on the Cavalier line in 1985, however, the division used the power plant in the Cavalier convertible only. Roggenkamp said it's possible that the California Cavalier could be rolled out next year nationally.

The two new models made their debut at the Los Angeles Auto Expo and the Orange County Auto Show. Roggenkamp said the IROC-Z will primarily be advertised through billboards and regional magazine ads, while the Cavalier will utilize print, television and some radio.

Ryan elected to head North Dakota dealers

BISMARK, N.D.—James M. Ryan of Jim Ryan Chevrolet, Inc., Minot was elected president of the Automobile Dealers Assn. of North Dakota.

James M. Ryan

Ryan has been on the board of directors since 1977 and served as vice president during the past year. Prior to becoming a Chevrolet dealer, he worked for Chevrolet from 1937 to 1957.

New vice president of the association is Cedric Theel, Cedric Theel, Inc., Bismarck.

Ford discourages U.S. buyers of Canadian cars

TORONTO.—Ford Motor Co. of Canada, Ltd., is changing the emission stickers on its cars to try to prevent Americans from taking advantage of the cheaper Canadian dollar to buy cars in Canada, the Montreal Gazette reported.

Stickers on Ford of Canada cars will no longer indicate whether they meet U.S. Department of Transportation and EPA safety and pollution standards, the report said.

Before taking Canadian cars across the border, U.S. buyers will have to take them to environmental test centers and go through a long and expensive certification process. Previously, buyers simply showed U.S. Customs officers the sticker indicating the vehicle's compliance with U.S. standards, the Gazette said.

Bert Serre, Ford of Canada vice president of public affairs, said purchases of Canadian cars by Americans upset the allocation plan that Ford has worked out for its North American plants, according to the report.

Market share also shows an increase

Import registrations gain for month

By Jenny L. King
Detroit Reporter

Registrations of new imported cars in the U.S. in March were up more than 20,000 units from the same month a year earlier and increased their share of the total market by 0.12 percentage points.

New import registrations totaled 221,699 for the month, up 11.52 percent from 198,802 a year earlier. They represented 23.92 percent of the overall market, up from 23.80 percent in 1984.

For the second consecutive month, Honda claimed the top spot, beating out Nissan by 2,500 cars. Toyota sat back in third place, the same position it held in March, 1984.

According to figures compiled by R.L. Polk & Co., which counts U.S.-built Hondas, Nissans and Volkswagens as imports, 43,628 new Hondas were registered in March, accounting for 19.68 percent of the import total. Twelve months earlier, 40,493 Hondas joined the ranks for 20.37 percent of the total.

Nissan, retaining the No. 2 spot it held a year earlier, increased its numbers but dropped slightly in market share. This year, 40,960 Nissan passenger cars were registered, up from 37,970 in 1984. The Nissan share slipped 0.62 percentage points, however, to 18.48 percent from 19.10 percent.

Third-place Toyota was up 5,000 in numbers year to year and gained 0.46 percentage points. Other market-share gainers included Mazda, up 0.77 percentage points, and BMW, up 0.43 percentage points.

VW was down 0.24 percentage points; Subaru was down 0.54 percentage points; Volvo dropped 1.15 percentage points; Mercedes-Benz was down 0.13 percentage points, and Audi slipped 0.33 percentage points.

The top 10 imports accounted for 87.81 percent of the March, 1985, market, down from 89.85 percent in 1984.

First-quarter import registrations of 627,137 were up 6.63 percent from 588,130 in 1984. Their share of the total U.S. market climbed to 25.20 percent from 24.87 percent a year earlier.

Ten imported-car makes claimed 88.21 percent of the import segment this year compared with 89.36 percent in the first quarter of 1984.

Honda also topped the first-quarter import-registration roster, edging past second-place Toyota and third-place Nissan. The gap between the top three and the succeeding makes was dramatic: Nissan finished the three months with registrations of 114,408, followed by Mazda in fourth place with 40,708 and VW in fifth place with 38,893.

For the quarter, Honda was up 0.41 percentage points; Mazda was up 0.16 percentage points, and BMW gained 0.40 percentage points over its year-ago share.

Toyota slipped 0.43 percentage points; Nissan was down 0.24 percentage points; VW dropped 0.48 percentage points; Subaru slipped 0.49 percentage points; Volvo was down 0.35 percentage points; Mercedes was off 0.10 percentage points, and Audi was down 0.03 percentage points.

Japan as a country of manufacture climbed to 70.00 percent from 69.38 percent in March, 1984. West Germany slipped to 13.87 percent from 13.96 percent and the U.S. was up to 8.83 percent from 7.96 percent. Numbers of cars registered from each exporting country included:

	March, 1985	March, 1984
Japan	155,196	137,921
West Germany	30,739	27,755
United States	19,568	15,822
Sweden	11,591	12,696
France	2,417	2,678
Great Britain	1,613	1,379
Italy	575	518
Ireland	0	33
TOTAL	221,699	198,802

First-quarter Japanese penetration dipped to 71.13 percent from 71.56 percent last year. Cars from West Germany represented 13.57 percent this year versus 13.18 percent in 1984, while U.S. "imports" climbed to 8.10 percent from 7.51 percent. The first-quarter breakout by country of origin follows:

	3 Mos., 1985	3 Mos., 1984
Japan	446,108	420,872
West Germany	85,123	77,490
United States	50,779	44,210
Sweden	32,711	32,342
France	6,416	7,802
Great Britain	4,495	4,210
Italy	1,505	1,109
Ireland	0	95
TOTAL	627,137	588,130

Imported pickup truck registrations were up 38.10 percent March to March, according to the Polk registration figures. This year, they totaled 79,189 compared with 57,332 in 1984 and included these totals by maker:

	March, 1985	March, 1984
Toyota	29,436	19,576
Nissan	22,864	19,075
Mazda	9,063	9,727
Dodge Ram 50	6,441	2,994
Others	11,374	5,960
TOTAL	79,178	57,332

Import-truck registrations exploded 37.56 percent in the first quarter, to 224,538 from 163,230 a year ago. The breakout follows:

	3 Mos., 1985	3 Mos., 1984
Toyota	82,907	59,814
Nissan	67,109	48,275
Mazda	26,011	27,894
Dodge Ram 50	17,678	9,070
Others	30,833	18,177
TOTAL	224,538	163,230

Rover cars to be built in India under license

COVENTRY, England.—Austin Rover Chairman Harold Musgrove attended a ceremony in Madras, India, to launch production there of Rover SD1 models.

Standard Motor Products of India will produce, under licence, 12,000 two-liter gasoline-engined versions of the Rover for sale in India. About 2,000 units are expected to be built in India during the first year of production.

Personal-use flat rate gains popularity

Survey shows more company fleets prefer it to straight mile rate

Nearly eight out of 10 U.S. fleets reimburse their employes 20 or 20.5 cents a mile for business use of personally owned cars, according to the National Association of Fleet Administrators (NAFA) 1984 personal use survey.

The survey also reveals that one out of three U.S. fleets now charges more than 15 cents a mile for personal use of the company car compared to 10 cents or more in 1983.

A number of fleets indicate they are increasing their personal use chargeback in 1985 "to meet the new tax law fair market value."

According to NAFA, for the first time ever, more companies are using a flat rate for personal use chargebacks rather than a straight mile rate. In addition, more fleets than ever before are now adding the personal use charge to the employe's income tax form as additional income.

A total of 407 U.S. commercial fleets operating 264,905 passenger cars participated in NAFA's survey which is broken down into seven groups — Drug & Cosmetics, Chemical & Petroleum, Food & Beverage, Insurance, Manufacturing-Consumer, Manufacturing-Industrial, and Miscellaneous.

There are also separate categories for Public Utility, Government and Canadian fleets.

Drug & Cosmetics Group

The Drug and Cosmetics Group consists of 42 fleets operating 32,292 passenger cars (2,573 company-owned, 29,719 leased). These fleets estimate that personal use is 14 percent of the total mileage driven every year.

Every fleet in the group permits personal use of the company-provided car after working hours and on weekends and holidays. One fleet does not permit the car to be used for vacation travel. No fleet places a limitation on the number of personal miles that can be driven.

Only one fleet does not charge for personal use; 41 do have a chargeback system. Fourteen fleets have a straight mileage charge; 19 use a flat weekly or monthly charge, while nine fleets use a combination of methods for determining the chargeback.

Among the fleets with a straight mileage charge, three each set the rate at nine and 12 cents a mile. One fleet each charges for gas only, 7.5 cents, 8, 10, 13, 14, 15, and 20.5 cents a mile.

Among the fleets with a flat personal use charge, there are these rates: $25 a month, four fleets; $35 and $50 a month, two fleets. Other monthly charges (by one fleet each) are: $18 to $22, $15, $20, $32.50, $31 and $45. Weekly charges include $5, $7, $15 and $20.

Fleets with a combination flat rate and mileage have these rates (all in one fleet each): $15 a month and six cents a mile after the first 250 miles; six cents a mile and $18 a month; $30 a month and nine cents a mile; $15 a month and seven cents a mile; seven cents a mile and $18 a month; $30 a month plus 10 cents a mile over 300 miles a month; $15 a month and seven cents a mile; $40 or $50 a month plus seven, eight or nine cents a mile depending on car driven. In one fleet the charge is $6.30 a week plus six cents a mile.

In reimbursing an employe for use of a personal car for business (when there is no assigned fleet car), 20 fleets pay 20 cents a mile. Two fleets each charge 18.5 and 20.5 cents a mile. One fleet each pays 15, 17, 24 and 25 cents a mile. One fleet pays $250 a month plus actual gas costs, while another reimburses the driver a flat rate of $310 a month.

When an assigned fleet car is not in operation and use of a personal car is required, 24 fleets pay the employe 20 cents a mile. Five fleets pay 20.5 cents a mile; three pay 18.5 and one fleet each pays 24 and 25 cents a mile.

Chemical & Petroleum Group

The Chemical and Petroleum Group consists of 33 fleets operating 28,313 passenger cars (17,233 company-owned, 11,080 leased). Personal use among the fleets in this group amounts to 17 percent of total mileage driven.

Two fleets in the group do not permit any personal use of the company car; the other 31 fleets permit such use after working hours.

Thirty fleets permit the car to be driven on weekends and holidays, while 24 permit it to be driven on vacations. Two fleets that permit personal use place specific limitations on such use. One fleet says the limit is 1,000 miles a year, while the other is more general and says the limit is "reasonable use."

Twenty-seven of the 31 fleets permitting personal use charge for it; four do not. Twelve fleets have a staight personal mileage charge; 12 have a flat weekly or monthly charge, while three use a combination method.

Three fleets charge 10 cents a mile for personal use; two charge 13 cents. Other mileage charges (in one fleet each) are: 7.5 cents a mile, nine, 12, 15½, 16, 17, and 20.5. Among the fleets with a flat rate, three each charge $30 and $50 a month; two charge $35 a month, while one charges $100 a month. One fleet charges $77 a month for use of an eight-cylinder car and 10 cents a mile for a six-cylinder car.

The fleets with a combination chargeback set it at 12.5 cents a mile and $50 a month; 10 cents a mile plus $35 a month; and $25 a month minimum or eight cents a mile.

Twelve fleets collect the personal use chargeback through an expense report deduction. Eight fleets use salary deduction. Five fleets add the personal use charge to the employe's annual income.

In one fleet the flat monthly rate is deducted from the salary; the mileage charge is paid by personal check. In another fleet, the flat rate is a salary deduction; the mileage charge is deducted from the expense report.

In three fleets only the employe is permitted to drive the company car; in the other 28 that permit personal use both the employe and spouse can use it. Twelve fleets permit licensed children to drive, and one fleet extends the driving privilege to "others" provided the employe is in the car.

Five fleets have a minimum age requirement. In three of them it is 25; in the other two it is 18 and 21.

Nine fleets require the employe to pay for repair costs resulting from an accident during personal use. In two fleets it is the full amount of the repairs. In three fleets it is a dollar amount of either $50 or $100, while four fleets assess the "insurance deductible" — $100 or $250.

Nine fleets charge the employe with an accident if another person was driving the car when the accident occurs.

In determining reimbursement for business use of a personal car (when the employe does not have a company car), 26 fleets use a straight mileage rate. In 13 fleets it is 20 cents a mile; in 10 the rate is 20.5 cents a mile. One fleet each pays 11 cents plus gas, 17 cents, and 22.5 cents a mile.

Three fleets use a sliding scale to reimburse employes for use of a pesonal car. In one fleet it is 20 cents a mile for the first 1,250 miles a month, then 11 cents a mile; in another it is 20.5 cents for the first 15,000 miles a year, 11 cents a mile thereafter; another pays 20 cents a mile for the first 900 miles a month and 11 cents for additional mileage. One fleet uses a combination method of $150 a month plus 20 cents a mile.

When an assigned fleet car is not in operation and a pesonal car is used for business, every fleet in the group reimburses the employe on a straight mileage basis. In 14 fleets the rate is 20 cents a mile; in 10 fleets it is 20.5 cents. One fleet each pays 10 cents plus gas; 11 cents plus gas; 17 cents, and 22.5 cents a mile.

Food & Beverage Group

The Food and Beverage Group consists of 38 fleets operating 21,811 passenger cars (10,999 company-owned, 10,812 leased. Every fleet in the group pemits personal use of the company car; only one does not permit it to be driven on vacations. Personal use in this group amounts to 18 percent of the total annual mileage, according to those fleets reporting this statistic.

Five fleets in the Food and Beverage Group place a limit on personal mileage. In two fleets it is 100 miles a week; in two others the limit is 5,000 miles a year. The fifth fleet did not specify its limitation.

Thirty-four of the 38 fleets in the group charge for personal use of the company-provided vehicle; four do not. Of those that charge, nine have a straight mileage charge; 18 have a fixed weekly or monthly charge, while seven use a combination of both.

Among the fleets with a mileage charge, three set it at 10 cents a mile; one each 20 cents a mile, 20.5 cents a mile, 23 cents a mile. One fleet charges 10 cents a mile after 50 "free" miles a month; another charges 14 cents a mile for trips over 100 miles. One fleet in the group offers an option: seven or nine cents a mile or .5 or .75 percent of the capitalized cost monthly. One fleet reported it charged a "fair market," but did not elaborate on what it was.

Among the fleets with a flat rate, two fleets each charge $50 and $46 a month. Other flat charges mentioned (by one fleet each) were: $25, $60 or $80 a month depending on type of car, $20 or $40 a month; $40 or $60 a month; $50 or $100 a month; $40 a month; $100 a month; 28 a month; $35 a month; $6 a week; $22 a week; $350 a year; and $500 a year.

Those fleets using a combination charge for personal use have these rates (in one fleet each): 10 cents a mile and $7 a week; 10 cents a mile and $5.25 a week; 16

Continued from Page E-6

cents a mile plus $10 every four weeks; nine cents a mile for "extended use" and $50 a month; $50 a month and 10 cents a mile after 100 miles in a month; and 10 cents a mile plus $20 a month.

Nine fleets in the Food and Beverage Group collect the personal use chargeback by means of an expense report deduction; 19 collect it by means of a salary deduction. Other methods of payment cited by the companies in the group include "driver pays $150 every three months;" three fleets add the charge to the employe's annual income as reported on the W-2 form; one fleet said, "Employes pay mileage as incurred," while another reported, "We collect 10 cents a mile from the expense report and than add 10 cents a mile additonal income to the employe's W-2."

Ten fleets in the group reported they had increased their personal use charge during 1984 and several others indicated they would raise the rates again in 1985 "as a result of the new tax law."

In two fleets, only the employe is permitted to drive the company-provided car. In the others, the employe and spouse are given personal driving privileges. Twenty fleets permit "licensed" children to use the company car, and four fleets extend the driving privilege to "others" living in the same household.

Fifteen fleets have a minimum age for driving privileges. In one fleet each it is 17, 20 and 25. In six fleets the minimum age is 18, while in five others it is 21.

Sixteen fleets in the Food and Beverage Group assess the employe for repair costs resulting from accidents incurred during personal use. One fleet charges the full amount of the repairs; six have a dollar amount ranging from a low of $50 to a high of $500. One fleet said it charges "20 percent of the repair cost or $250, whichever is higher."

Nine fleets charge the driver the "insurance deductible" for repairs required after an accident during personal use. This ranges from a low of $100 (four fleets) to a high $500. One fleet says it only makes the charge for a second accident.

Twenty-three of the 38 fleets in the group say they charge the employe with an accident if another person was driving the car when the accident occurred. Several of these fleets say such a charge is levied only when an "unauthorized" person was driving the cars.

In discussing the policies dealing with the business use of pesonal cars, there are two aspects: (1) When the employe does not have an assigned fleet car, and (2) When the company car is not in service.

When the employe does not nave a company car, the majority of fleets reimburse him for business use of a personal car by a straight mile rate. In 12 fleets it is 20 cents a mile; in nine fleets the rate is 20½ cents a mile. Two fleets each pay 15 and 21 cents a mile. Three fleets pay a flat rate plus mileage. The combinations are $300 a month and five cents a mile; $260 a month plus nine cents a mile, and $155 a month and 12 cents a mile. One fleet pays a flat $380 a month, while another pays 20 cents a mile for the first 12,000 miles, 18 cents mile for additional mileage.

In those cases where a company-assigned car is not in operation and the employe drives his personal car, all but one fleet in the group reimburses him on a mileage basis. The exception is one fleet that pays $7 a day. Sixteen fleets pay 20.5 cents a mile. Two fleets reimburse the employe 23 cents a mile, while one fleet each pays 15, 18.5, 21 and 22 cents a mile.

Insurance Group

The Insurance Group consists of 59 fleets operating 36,800 passenger cars (19,783 company-owned, 17,017 leased). Fleets in the group report that personal use accounts for 20 percent of the total mileage their cars are driven.

Fifty-eight of the 59 fleets in the Insurance Group permit personal use of the company-provided car. One fleet limits the use to "commuting," two fleets ban its use on weekends and holidays, and four fleets do not permit the company car to be driven on vacations.

Ten fleets in the group place some limitations on the amount of personal use permitted. Some of the specific limitations mentioned include "cannot exceed 49 percent of the total mileage;" "6,500 miles a year," "10 percent of business mileage;" "reasonable (in our judgment);" "commuting miles only;" "1,000 a month;" "1,000 miles when on vacation" and "50-mile radius of their home."

Two fleets in the group do not charge for personal use; the other 56 that permit pesonal use do have a chargeback system. Twenty fleets use a straight mileage charge. Three fleets each charge 14 and 20.5 cents a mile. Two fleets each charge 15 and 16 cents a mile, while one fleet each charges 9, 10, 11, 12, 12.5, 13, 17 and 20 cents a mile.

Among the fleets with a flat rate, five fleets charge $50 a month; three charge $30 a month. Other monthly charges (by one fleet each) include $35, $37.50, $39, $40, $45, $55, $60, $75. One fleet's charge ranges from $40 to $60 a month depending on size of car, while another's charge ranges from $85 to $200 a month. Weekly charges (again by one fleet each) are $12 a week and $20 a week. One fleet charges $520 a year, while another's charge is "25 percent of the total car cost."

Fifteen fleets in the Insurance Group use a combination chargeback system. These chargebacks include six cents a mile and $15 a month; $10 a week and 15 cents a mile over 6,500 miles a year; nine cents a mile with $650 added to the employe's W-2 form: $684 implied annual income added to W-2; nine cents a mile over 600 miles a month plus $650 added to W-2; nine cents a mile plus $30 a month; 15 cents a mile and $60 a month; $50 a month plus 12 cents a mile over 600 miles a month; $35 a month plus gasoline costs on vacation; $39 a month plus 13 cents a mile over 300 miles a month; $15 a month plus five cents a mile; $43.25 a month plus 10 cents per mile for trips over 200 miles; 10 cents a mile and $20 a month; $19 a month and 15 cents a mile; and $42 a month plus 14 cents a mile.

Twenty-eight fleets in the Insurance Group collect for personal use by means of an expense report deduction; 17 use a salary deduction, while 11 use other methods of collecting the chargeback. In most of these fleets the personal use chargeback was added to the employe's W-2 form as additional income. In one fleet the employe pays for personal use by a check to the company.

Sixteen fleets said they increased their personal use chargeback in 1984. The majority of them are staying with their current system, but increasing the amount. However, one fleet switched from a flat rate to 20.5 cents a mile, while another went from a mileage charge to a flat rate.

In four fleets, personal use is restricted to the employe only; in the other 54 fleets permitting personal use, both the employe and spouse can use the company car. Twenty-four fleets permit licensed children to drive, and six extend the driving privilege to "others" in the same household.

Minimum age requirements for driving the company car are set by 11 fleets. Two fleets each set the minimum age at 18, 21 and 25 years. One fleet each has a minimum age of 20 and 26.

Twenty-two fleets in the Insurance Group charge the employe for repair costs resulting from an accident occurring during personal use. One fleet charges the full amount; 11 have a dollar payment ranging from a low of $50 to a high of $300. The most frequently mentioned figure is $100. Ten fleets assess the "insurance deductible" as the charge. This ranges from a low of $100 to a high of $250.

Thirty fleets say they "charge" the employe with an accident if another person was driving the car when the accident occurred; 27 do not enter such a charge on the employe's record.

In reimbursing an employe for business use of a personal car (when there is no assigned company car), most fleets use a straight mileage payment. In 24 fleets the rate is 20 cents a mile. Eight fleets pay 20.5 cents a mile; two pay the employe 23 cents a mile. Other reimbursement rates include (by one fleet each) 17 cents, 17 cents plus gas, 18, 18.5, 19, 21.5 and 22 cents a mile.

Five fleets reimburse the employe on a sliding scale: 20.5 cents a mile for the first 15,000 miles, then 11 cents a mile; 22 cents a mile for the first 7,000 miles, then 18 cents a mile; 24 cents for the first 10,000 miles, 19 cents for the next 5,000, then 16 cents a mile for any additional mileage; 24 cents for 1,000 miles, then nine cents for additonal driving, and 16 cents for the first 700 miles in a month, plus 10 cents a mile for the balance.

Two fleets reimburse the driver of a personal car on a combination basis. In one fleet the rate is $22 a week plus 20 cents a mile; in the other fleet it is nine cents a mile plus $25 a month.

In reimbursing an employe for business use of a personal car when an assigned fleet car is not in operation, every fleet uses a straight mileage method of payment. In 24 fleets the rate is 20 cents a mile; in 11 fleets the rate is 20.5 cents, while in two fleets each the rate is 18 and 18.5 cents a mile. One fleet each reimburses the employe at these rates: 16 cents a mile, 17, 19, 21, 21.5, 22, 23 and 26 cents a mile.

Manufacturing-Consumer

The Manufacturing-Consumer Group consists of 40 fleets operating 20,142 passenger cars (6,389 company-owned, 13,753 leased). Every fleet in the group permits personal use of the company-provided car after working hours, on weekends and holidays, and for vacation travel. Personal use amounts to 18 percent of the total mileage driven by these fleets.

Four fleets place some limitations on personal use. They include 600 free miles for vacation travel and then a 10 cent a mile charge; 200 miles a month; use only within a 350-mile radius of the division point. One fleet says personal use must be "reasonable."

Thirty-two of the 40 fleets in the group charge for the personal use of the company car. Ten fleets have a personal mileage charge; 18 have a flat weekly or monthly charge, while one uses a combination of both methods. The mileage charges in two fleets each are 10 and 11 cents a mile. One fleet each charges 12, 13, 14, 20, and 20.5 cents a mile. Another fleet that charges 20 cents a mile deducts 13 cents from the employe's expense account and adds seven cents a mile to his W-2 form as additional income. The one fleet using a combination charge sets it at 10 cents a mile plus $21 a month.

Among the fleets with a flat chargeback rate, three each charge $30 and $40 a month. Two fleets charge $45 a month. Other monthly charges include (in one fleet each): $20, $25, $33, $50 and $150 a month. Weekly charges (in one fleet each) are: $3, $10, $11 and $11.50.

Four fleets reported they increased their personal use chargebacks in 1984; a number of others said they plan to raise them in 1985.

Of the 32 fleets that charge for personal use, 15 collect the chargeback through an expense report deduction; 12 collect it through a salary deduction, while five use other methods. Four of these five fleets add the personal use chargeback to the employe's income on the W-2 form at the end of the year; the fifth fleet requires the employe to pay for such use by personal check.

Four fleets in the Manufacturing-Consumer Group permit only the employe to dirve the company car. The other 36 fleets permit both the employe and spouse to use the car, while 19 extend the driving privilege to children of the employe. Four fleets permit personal use by "others" in the same household.

Nineteen fleets have a minimum age requirement for use of the company car. In seven fleets the minimum age is 21; in four fleets each it is 18 and 25 years. One fleet only requires the driver to be "licensed" and in another the minimum age is set at 16.

A portion of the repair costs resulting from accidents that occur during personal use is borne by the employe in 13 fleets. Four of them have a fixed dollar amount ranging from a low of $50 to a high of $350. In nine fleets the employe's share of the repair costs is the "insurance deductible" which ranges from a low of $100 to a high of $500, with $250 being the most commonly cited amount charged to the employe.

There are two situations that may exist in reimbursing employes for business use of a personal car — no assigned company car, or the assigned car is not in operation.

When there is no assigned company car, 29 fleets in the Manufacturing-Consumer Group reimburse the employe for use of the personal car on a straight mileage basis. Fifteen fleets pay 20 cents a mile; six pay 20.5 cents a mile. Two fleets pay the employe 22.5 cents a mile, while one each reimburses at the rate of 15, 18, 22, 32 and 33 cents a mile.

Three fleets in the group reimburse the employe on a cash payment and mileage basis. One fleet each pays 10 cents a mile and $155 a month; 12.5 cents plus $330 a month; 14 cents a mile and $240 a month. One fleet pays a flat rate of $350 a month.

When an employe is required to use a personal car because the company car is not operating, 20 fleets reimburse the employe at 20 cents a mile; five pay 20.5 cents a mile. Other rates are (in one fleet each): 10 cents, 18, 19, 22, 22.5, 24, 25 and 33 cents a mile.

One fleet pays the employe 32 cents a mile for the first 900 miles driven, then 18 cents for the remaining mileage. Another fleet pays 14 cents a mile plus $250 a month.

Manufacturing-Industrial

The Manufacturing-Industrial Group consists of 63 fleets operating 58,625 passenger cars (14,283 company-owned, 44,342 leased). According to the participating fleets, personal use accounts for 18 percent of the total mileage driven in a year.

Sixty-two of the 63 fleets in the group permit personal use of the company-provided car after working hours, on weekends and holidays. Two fleets do not permit personal use for vacation travel.

Seven fleets place specific limitations on personal use. In two fleets the limit is 20 percent of the total mileage driven; in another fleet, personal use must be less than 50 percent of total use. Three of the fleets limit use on vacations; the limits are 300, 1,000 and 2,500 miles.

Seven fleets in the group do not charge for personal use; 56 do require a chargeback. Twenty fleets use a straight mileage charge; 26 have a flat weekly or monthly use charge, while eight have a combination of mileage and flat rate chargeback policy.

Among the fleets with a mileage charge, three each set it at 10, 12 and 14 cents a mile. Two fleets charge 11 cents a mile, while one fleet each has these charges: 8, 9, 13, 18, 18.5 and 20.5 cents a mile. One fleet charges 8, 10 or 12 cents a mile depending on size of car driven.

Five of the fleets with a flat monthly rate charge $35 a month; three fleets each charge $25, $30, $40 and $50 a month. Other montly charges (each by one fleet) are: $55, $75 and $80 for a four-cylinder car, $100 for a six-cylinder car. Weekly charges (each by one fleet) are $5, $12, $13 and $18. One fleet charges $570 a year for personal use of the company car.

Eight fleets employ a combination of mileage and flat rate for personal use chargeback. They are (each by one fleet): five cents a mile with a $50 minimum per month, or one-half of one percent of the car's capitalized cost; fuel plus $50 a month; 10 cents a mile and $25 a month; 17 cents a mile and other $45 or $55 a month; seven cents a mile plus $55 a month for vacations; 14 cents a mile over 1,000 a month plus $115 a month; eight cents a mile and $34 a month; and $40 a month plus three cents a mile for each cylinder in the car's engine.

Twenty-seven fleets in the group collect the personal use chargeback through an expense report deduction; twenty-one have a salary deduction program, while six add the personal use charge to the employe's W-2 form as additional income.

Two fleets restrict personal use to the employe alone; the remaining 60 fleets permitting personal use say both the employe and spouse can drive the company car. In addition, 30 fleets permit licensed children to use the car, and four fleets extend the driving privilege to "others" living in the same household as the employe.

Thirty-three fleets have a minimum age requirement before personal use is permitted. In 12 fleets it is 21 years of age; in nine fleets each it is 18 and 25. One fleet each sets the minimum at 19 and 20, while one fleet has a minimum age of 21 for females and 25 for males.

In 28 fleets some portion of the repair cost resulting from an accident during personal use is charged to the employe. One fleet charges the full amount; 12 have a specific dollar amount that ranges from a low of $100 to a high of

Continued on Page E-10

Fleet operating expenses continue to ebb

Survey shows cost was a penny per mile less in 1984 than in 1982

Fleet operating expenses declined for the third consecutive year in 1984, according to the annual operating expense survey conducted by the National Association of Fleet Administrators Inc. (NAFA).

A total of 84 fleets, operating 79,660 passenger cars, submitted data for the annual survey.

Operating expenses declined approximately three tenths of a cent per mile in the "composite" fleet group (those fleets that do not break out expenses by the size of car) from .0793 cents per mile in 1983 to .0763 cents per mile in 1984.

The 1984 operating expense is a full penny per mile less than in 1982.

Average fuel economy or miles per gallon for the fleets was computed using a price of $1.26 a gallon for fuel. This is an average for the year combining both full-service and self-service pump prices.

The average miles per gallon figure for compacts was 23.8; for mid-size cars, 20.5; for large cars, 18.7.

Results of the survey are based on NAFA's Recommended Classification of Automobile Expenses. Under this accounting system, fleet costs are divided into three major categories:

(1). Operating Expenses: These costs consist of all expenses directly related to running a vehicle — fuel, oil, tires and tire repair, and normal maintenance and repair. These expenses are computed in pennies per mile per car.

(2). Incidental Expenses: These costs include licenses and taxes, accident repairs less recoveries, washing, parking and tolls, and miscellaneous expenses. These costs are computed on a dollars per car per month basis.

(3). Standing Expenses: The third category consists of investment costs, either interest paid on purchases or leasing company service charges, depreciation reserve, insurance and selling costs. Deducted from these expenses are depreciation adjustments (if any) after a vehicle is sold. The standing expenses are also expressed in dollars per car per month.

To arrive at the Net Expense figure, personal use chargebacks and any optional equipment purchased by the company-car operator are deducted from the combined Incidental and Standing Expenses.

The composite fleet consists of nearly 40,000 passenger cars. The fleets in this group do not break out expenses by size of car; they provide only totals for the entire fleet.

The cars in these fleets were kept in service an average of 31.5 months and driven 57,740 miles. Two percent of the cars in the composite fleet are subcompacts; 69 percent are compacts; 25 percent are mid-size; four percent are large cars.

Seventy-eight percent of the cars in the composite fleet have four-cylinder engines; 19 percent are equipped with six-cylinder

Personal

Continued from Page E-5

$1,000, with $100 and $250 being the most frequent. Fourteen fleets charge the "insurance deductible" to the operator. The range in this category is from a low of $50 to a high of $1,000; $250 is the most often cited figure.

Thirty-three fleets charge the employe with an accident if another person was driving the company car when the accident occurred.

In reimbursing an employe for business use of a personal car when there is no assigned company car, 28 fleets pay the employe 20 cents a mile. Seven fleets pay 20.5 cents a mile; four pay 21 cents. One fleet each pays 17, 18, 22 and 32 cents a mile for such use.

Seven fleets employ a mileage rate and fixed payment scale to reimburse the employe. The rates are (in one fleet each): nine cents a mile and $55 a week; 9.5 cents a mile plus $325 a month; 10 cents a mile and $175 a month; eight cents a mile and $180 a month; 20 cents a mile and $325 a month; 8.5 cents a mile and $270 a month; and 10 cents a mile plus $200 a month.

Two fleets reimburse the driver on a graduated or sliding mileage scale. The rates are 20 cents a mile for the first 1,500 miles a month, then 11 cents a mile; and 21 cents a mile for the first 1,250 miles, then 10 cents a mile.

When an assigned fleet car is not in service, every fleet but one reimburses the employe for use of a personal car on a straight mileage basis. In 36 fleets the rate is 20 cents a mile; in nine fleets it is 20.5 cents a mile; four fleets pay 21 cents. One fleet each pays 9.5, 17, 18, 18.5, 22,and 22.5 cents a mile. The one fleet with a sliding scale pays the employe 20 cents a mile for the first 1,250 miles, then 10 cents a mile thereafter.

Miscellaneous Group

The Miscellaneous or Other Group consists of 32 fleets that do not fall within any of the other specific industry classifications. These fleets operate 11,922 passenger cars (2,604 company-owned, 9,318 leased). Personal use of the company car amounts to slightly more than 19 percent of the total number of miles driven.

Thirty fleets in this group permit personal use of the company car; two do not. Two fleets do not permit personal use on weekends and holidays, and three fleets do not authorize use of the car for vacation travel.

Three fleets report having limitations on personal use. One did not specify the limitation, one says it is 3,600 miles a year, another requires the operator to pay for gas and oil (in addition to the regular chargeback) for trips of more than 200 miles.

Twenty-five of the 30 fleets have a regular personal use chargeback system; five do not charge for the personal use. Nine fleets have a straight mileage charge; six have a flat weekly or monthly charge, while 10 use a combination of charges.

In the fleets with a mileage charge, two set it at 11 cents a mile. In the others the charge is 9, 10, 15.5, 17, 18, and 20.5 cents a mile. Three fleets charge $25 a month; two charge $50 a month; one fleet charges $15 a week for personal use.

Two fleets charge $50 a month and 10 cents a mile. Other fleets have these chargeback rates: $30.30 a month plus six cents a mile; $32 a month and 12 cents a mile; $20 a month and nine cents a mile; $20 a month plus 10 cents a mile; $15 a month and five cents a mile. One fleet charges $60 a month plus 20 cents a mile over 300 miles a month. One other fleet charges its employes three-fourths of the monthly lease rate plus $40 a month.

Eleven fleets collect the personal use chargeback through an expense report deduction; eight fleets deduct the charge from the employe's salary. Five fleets add the charge to the employe's income statement (the W-2 form) at the end of the year. One fleet gives the employe a separate W-2 form covering the additional income.

A minimum age requirement for driving privileges is set by 12 fleets. In four fleets it is 18; in three fleets it is 21. Two fleets merely require that the operator "be licensed," while one fleet each sets the minimum age at 23 and 25.

Five fleets restrict use of the company car to the employe only; the other 25 permitting personal use allow driving by both the employe and spouse. Fourteen fleets permit children to use the car, and six extend the driving privilege to "others" in the same household.

Twelve fleets charge a portion of repair costs resulting from accidents occurring during personal use. Four of the 12 assess a specific dollar amount; in one fleet it is $50; in the other three it is $100. Eight fleets charge the employe the "insurance deductible," most frequently $250, although one fleet does charge $250 for collision and $150 for comprehensive.

When an employe uses a personal car for business (when there is no assigned company car) all but three fleets in this group reimburse on a straight mileage basis. In 10 fleets the rate is 20 cents a mile; in five fleets it is 20.5; in two fleets it is 19 cents a mile. One fleet each pays at these rates: 12 cents a mile, 15, 19, 21, 22 and 30 cents a mile.

Three fleets pay a combination flat rate and mileage to the employe. The payments are $150 a month and 10 cents a mile; $150 a month plus 9.5 cents a mile; and $180 a month plus 8.5 cents a mile.

Every fleet reimburses its employe for business use of a personal car (when the assigned fleet car is not in operation) on a mileage basis. Nine pay 20 cents a mile; six pay 20.5 cents; two pay 19 cents a mile. Other rates include 12 cents a mile, 15, 18.5, 21, 22 and 28 cents a mile.

New quotas don't aid imports

Fleet sales of Japanese cars will not climb

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Despite the hefty 24 percent annual increase in shipments of cars to the U.S. under the Japanese government's voluntary restraint agreement (VRA), Japanese-import distributors in the U.S. are still so strapped for vehicles that little can be promised to the fleet industry.

The lion's share of this year's increase, announced by Japan's Ministry of International Trade and Industry (MITI), will be in the form of captive imports sold by Chrysler Corp. and General Motors, while major importers such as Toyota Motor Sales U.S.A. Inc. and Nissan Motor Corp. in U.S.A. will get only a 12 percent increase in volume.

"We were obviously disappointed that the number isn't greater," Don Esmond, Toyota's national fleet and truck manager, says. Although the increase will not change things much on the car side of the fleet business, Esmond notes, "Even under VRA we were able to increase fleet sales about 13 percent. Most of the (1984 fleet sales) increase was from the dealer body working with local accounts."

Any increase in fleet cars that results from the new quotas, according to Esmond, will be used to support daily rental and long-term fleet clients.

John Dorsey, manager of national truck and fleet sales for Mitsubishi Motor Sales of America Inc. (MMSA), says of the quota increase: "It's really a moot issue. If we get a big number, then it will help fleet. But we're looking at a 12 to 15-day supply at retail. Retail will gobble even a medium increase."

Jim Tavasci, Nissan's national fleet and leasing manager, says loosening of VRA coupled with Nissan's Sentra car production in Tennessee "in the long run will make more vehicles available for fleet — pending market conditions."

He says Nissan's U.S. car production holds greater significance for the company's fleet program than any increases under VRA: "We're looking at what possibilities exist to increase fleet availability, not so much as a result of VRA, but because of producion at Smyrna."

Gerard D. Murphy, fleet sales manager for American Isuzu Motors Inc., indicates the company has not decided what to do with its import volume increase.

"We're still unsure of the number," he says, adding that negotiations are continuing over Isuzu's share: "The original quote (preliminary figures put the company's increase at only 6,000 vehicles) doesn't allow us to go aggressively after fleet, as we have with truck."

American Isuzu is in the unique position of having over 250 full line dealers, yet is allotted the least number of cars among Japanese import marketing units. As a result, Murphy says, it follows that retail gets the sales priority.

On the truck side, however, it is a different story altogether for Isuzu. "Our posture here is to aggressively solicit the fleet market," Murphy says. Fleets accounted for nearly 24 percent of P'Up truck sales last year. "We've organized the fleet program to address the local market as well as the national market," he says.

In establishing its identity in the national fleet market, American Isuzu is following the same lighthearted approach it took when introducing its cars. Captitalizing on Isuzu truck's class win at Baja last year, Murphy says ads use the tag line, "If your employees drive like they're in the Indy 500, give them the truck that won the Baja 1000."

Another theme uses the line, "Isuzu Trucks: One of the few things tougher than making a profit."

Nissan's Tavasci notes an increase by the company in truck fleet sales over the past year. "We've increased our truck fleet business well over 100 percent," he says, noting this year is off to a fast start with a 10 percent increase in fiscal-year sales and 36 percent climb in the calendar year pace.

"The acceptability of our vehicles has been tremendous," Tavasci says.

Asked if the increase in truck fleet business is attributable to Nissan's Tennessee assembly plant operation, Tavasci replies the growth is more the result of "people starting to downsize their fleet vehicles. The compact trucks have proven themselves as being more economical."

Adding to that is strength of the small-truck market as a whole, he says. Advertising dollars spent on retail truck advertising have had an effect on fleet sales.

Mitsubishi's Dorsey is also bullish on the truck market. "We're looking to maintain and grow in the truck field," he says, adding that dealers are "concentrating on the local, small accounts."

Price also is a factor. "At $5,799, our price is attractive as a fleet truck. We're looking to grow in that sector," Dorsey says.

An important account for MMSA is Domino's Pizza in the Southeast, where franchises have been buying Mitsubishi trucks for use as delivery vehicles.

Esmond says Toyota's truck fleet business has been exceptional: "Where we've got the availability, we've been able to show healthy increases."

In 1984 Toyota posted an 84 percent increase in truck fleet sales. "We see more and more fleet vehicle-size downsizing," Esmond says. Addition of a one-ton version of the Toyota truck and cargo vans has helped the company's commercial sales.

Esmond says Toyota's commitment to the fleet business is shown by recent appointment of full-time fleet and truck managers in each of the company's sales regions. Previously, fleets were the responsibility of the regional merchandising manager.

Says Esmond: "We've been involved with the rent-a-car side and we're looking to better our relationship with the larger lessors, like PHH and Gelco. We want to keep these opportunities open."

Swiss luxury

Car renting elegance

In a move to expand the availability of elegance in rent-a-car travel in Switzerland, Hertz is extending its Prestige Service luxury-car rental to 11 locations throughout the European country.

The deluxe fleet offers a range of Mercedes 500 models equipped with mobile phones, air conditioning, automatic transmission and leather upholstery.

The luxury vehicles are available at Switzerland's Zurich, Geneva, Basel and Lugano-Agno airports.

In addition the service is available at downtown locations in Geneva, Zurich, Basel, Berne, Lausanne, Lucerne and Lugano.

According to Hertz, increased bookings, particularly from traveling business executives, spurred an expansion of the service. Hertz says it recognizes "the demand from non-price-sensitive car-rental customers for a prestige service providing luxury vehicles."

Hertz says customers can request delivery of Prestige vehicles to any city in Switzerland.

The special rent-a-car service was first launched by Hertz in France three years ago. Today, in addition to the Swiss locations, Hertz offers the Prestige Service in London, Paris, Nice, Vienna, Frankfurt, Munich and Dusseldorf.

According to Hertz, its vehicle renting and leasing operations are represented in over 120 countries at more than 4,500 locations.

Expenses

Continued from Page E-10

engines; three percent have eight-cylinder engines.

These are well equipped cars: 98 percent are air conditioned; 97 percent have automatic transmissions; 99 percent have power steering; 100 percent are equipped with power brakes.

Based on a fuel cost of $1.26 per gallon, these cars used 81 gallons of gas a month to drive 1,833 miles, an average miles per gallon figure of 22.5.

Total operating expenses for the group amounted to .0763, about one-third of a cent per mile less than in 1983 and a full cent per mile lower than in 1982.

Incidental expenses amounted to $35.32 per car per month. Standing expenses were $250.01 per car per month. Net Expenses (incidental expenses plus standing expenses minus a personal use credit or chargeback of $45.42) amounted to $239.91.

Translating all expenses into dollars per car per month, the total expense amounts to $379.76, or 20.7 cents a mile.

Compact Cars

The compact car segment of the 1984 operating expense survey reported operating expenses of .0708 cents per mile. These cars were driven an average of 7,747 miles per month. They were kept in service an average of 33.2 months.

Fuel expenses for compact cars were .0528 cents per mile. Based on a fuel price of $1.26 per gallon, these cars averaged 23.8 miles per gallon.

Every car in the group has a four-cylinder engine, and all of them were equipped with air conditioning, automatic transmission, power steering and power brakes.

Mid-Size Cars

Mid-size cars in the 1984 survey had operating expenses of .0837 cents per mile, with fuel expenses of .0614 cents per mile. They cost one cent a mile more to operate than a compact car.

Thirty-seven percent of the mid-size cars are equipped with four-cylinder engines, 56 percent with six-cylinder engines and seven percent with eight-cylinder engines.

Every car in the mid-size group was equipped with air conditioning, automatic transmission, power steering and power brakes.

Based on the standard gasoline prices of $1.26 per gallon, these cars averaged 20.5 miles per gallon, more than three miles per gallon less than the compact cars.

Large Cars

The large-car segment of the 1984 operating expense survey averaged 18.7 miles per gallon. These cars were driven an average of 2,085 miles per month and kept in service for 26.6 months.

Total operating expenses for this group of vehicles came to .0935 cents a mile, a penny per mile more than mid-size cars and two cents a mile more than compact cars.

Ninety-nine percent of the large cars have eight-cylinder engines, and all are equipped with air conditioning, power steering, power brakes and automatic transmissions.

Operating Expenses Canada

	1983	1984
Average Miles per Month	1,760	2,427
Fuel	.0979	.0816
Oil	.0026	.0012
Tires & Tire Repair	.0080	.0044
Repairs & Maintenance	.0221	.0205
Total Expenses	.1306	.1077

NAFA car size categories

Subcompact cars: Wheelbase of less than 99 inches and a curb weight of under 2,199 pounds.

Compact cars: Wheelbase between 100 and 104 inches and a curb weight of between 2,200 and 2,599 pounds.

Mid-size cars: Wheelbase between 105 and 108 inches and a curb weight of between 2,600 and 3,199 pounds.

Large cars: Wheelbase of more than 108 inches and a curb weight of more than 3,200 pounds.

Canada

As in previous surveys, cars in Canada cost more to operate than in the U.S. According to responses to the 1984 survey, operating expenses for Canadian cars amounted to .1077 cents a mile.

The Canadian fleet segment is made up of eight percent subcompacts, 44 percent compacts, 39 percent mid-size cars and nine percent large cars.

Fifty percent of the Canadian cars have four-cylinder engines; 28 percent have six-cylinder engines; 22 percent have eight-cylinder engines.

The Canadian cars are kept in service an average of 30.7 months and driven an average of 2,427 miles per month. Total service life for these cars averages 74,509 miles.

A breakdown of the Canadian fleet's operating expenses shows fuel expenses of .0816 cents per mile; oil, .0012 cents per mile; tires, .0044 cents per mile; repair and maintenance, .0205 cents per mile.

Reducing excess maintenance

Fleet managers say: Put pressure on providers

To resolve "excessive vehicle maintenance" problems in automotive fleets, deal with those from whom you purchased or leased the vehicle, advise fleet managers.

Over 200 fleet managers cited possible solutions to excessive maintenance problems in a survey conducted by Runzheimer Reports on Transportation, an industry newsletter published by Runzheimer International, Rochester, Wis.-based management consulting firm.

Almost one half, 48 percent of the survey respondents, advised working closely with the providers of the vehicle causing the maintenance headache, whether a dealer, lessor or manufacturer (see accompanying table). The fleet managers advised putting pressure on them to diagnose the difficulty, prescribe a cure and absorb unusual maintenance costs.

For additional ammunition in battling manufacturers, the fleet managers advised removing problem vehicles from the fleet (17 percent), not reordering maintenance-troubled models in the future (12 percent) and keeping accurate records to document problems (10 percent).

Here is what some respondents had to say about seeking satisfaction to the problem:

"Get the manufacturer involved! Let them help expedite parts and absorb some expenses."

"Enlist your leasing company to fight the battle with the manufacturers."

"Remove it (the vehicle) from your selector list immediately! Personally contact the dealer."

"Monitor repairs to document problems. If (the) manufacturer refuses to jointly remedy problems, remove that model from the approved bidders listing."

Although the key point made by most of the respondents is to seek restitution of costs through the manufacturer, a preventative maintenance program and thorough maintenance records to back up claims cannot be over-emphasized, concludes the report.

Survey Respondents Advice On Dealing with Excessive Maintenance Problems

Advice	Percent*
Work with the manufacturer's representatives/dealer/lessor	48
Remove vehicles from fleet	17
Don't reorder	12
Keep accurate records	10
Seek additional warranty coverage/recovery	7
Educate drivers to potential problem	4
Review present maintenance program/Increase frequency of preventive maintenance	4
Check with other fleets regarding similar problems	3
Identify the problem	3
Determine if driver is creating the problem	2
Free drivers of the problem	2
Review vehicle specifications Change use pattern	2

1984 through the efforts of our dealers," he added. "Availability should improve some during the coming year, but we just don't know yet by how much."

The Corolla and Tercel, Esmond noted, "have long been popular fleet cars. But in the past year, the Camry has really come into its own in the fleet market.

"It offers good size, fuel efficiency and low maintenance, the things most fleet buyers are looking for," he continued. "We really think it has a bright fleet future."

With the shortage of cars, Esmond said, Toyota dealers have placed greater emphasis on the fleet-truck business.

"They've found they can make money on fleet trucks and have really pursued it," he added. "Last year, Toyota's fleet-truck sales were up 87 percent from 1983 to 43,724 units. In 1982 our sales were less than 10,000."

Esmond said the small-truck fleet market grew by more than 70 percent last year, and that the first two months of 1985 "give every indication that it will continue its record growth.

"With payload capacities for small trucks continuing to grow, more and more fleets realize they can accomplish the same tasks with a small truck as a large one," he explained. "Fleets are downsizing because the smaller trucks are more fuel-efficient and require less maintenance."

Esmond thinks the Cargo Van, introduced last year, provides a great growth area for Toyota.

"Just as small pickup trucks have been replacing large pickups, small vans will start replacing large vans in fleets," he said. "They're fuel-efficient and require much lower maintenance. The only maintenance required on our van in the first 60,000 miles is oil changes."

Import fleet is on the rise

Gradually growing acceptance in North America

The number of imported cars in the average North American fleet is slowly but steadily on the rise, according to fleet composition surveys conducted between 1982 and 1984.

Runzheimer Reports on Transportation says that since 1982 the percentage of imported cars has increased one percentage point a year (see accompanying Table 1).

Although the percentage of fleets with imports has dropped slightly, 28 percent in 1982 to 27 percent in 1984 (Table 2), those fleets with imported cars have markedly increased the number from an average of 56 in 1982 to an average of 72 in 1984, a 29 percent jump (Table 3).

The 1984 fleet composition data were gathered from 506 North American respondents representing 248,524 cars. Data from 1983 reflect 532 North American responses totaling 265,000 cars. In 1982 a total of 95 fleets responded, representing 78,390 cars.

These data suggest a gradually growing acceptance of imports among U.S. and Canadian fleets which typically drive North American autos only. However, the report further notes that the definition of what constitutes an imported car has been changing for some time.

For example, General Motors has been marketing the Chevrolet Sprint, built by Suzuki of Japan, on the West Coast, and the Spectrum, built by Isuzu of Japan, in 17 Eastern states. By displaying a domestic nameplate, these vehicles are, at least in name, domestic. But the Sprint and Spectrum are actually Japanese Chevys, not American Chevys; they are domestic-sponsored imports.

A clear distinction between imported and domestic cars is not likely to made in the near future. This year, with the quota on Japanese auto exports to the U.S. increased, more cars will be imported here and, subsequently, more questions will be raised about their parentage.

Table 1
Composition of Average North American Car Fleet Domestic vs. Imports

	1982	1983	1984
Domestics	98%	97%	96%
Imports	2%	3%	4%

Table 2
Surveyed Fleets With Imported Cars

	1982	1983	1984
Domestics	28%	26%	27%

Table 3
Average Number of Imported Cars in Those Fleets Having Them

	1982	1983	1984
Domestics	56	58	72

Confusion over the complexity of the matter might be reduced by using a code such as the following created by Runzheimer's auto analysts to classify cars available to American consumers:

DN/FM — Domestic nameplate but foreign made (Plymouth Colt).

DN/DM — Domestic nameplate and domestically made (Ford Escort).

FN/DM — Foreign nameplate but domestically made (Volkswagen Golf).

FN/FM — Foreign nameplate and foreign made (BMW 318i).

Despite this type of code, the once clear line distinguishing imported cars from domestics will continue to be blurred.

AND HERE'S TO A CONVENTION AS SUCCESSFUL AS YOU ARE.

WHEN YOU ORDER A FLEET OF BUICKS, PEACE OF MIND IS STANDARD EQUIPMENT.

Ordering a fleet of Buicks would make your company car drivers happy, maybe even grateful.

Ordering a fleet of Buicks could do wonders for your company's image. If you're a successful company, you should act like one.

Ordering a fleet of Buicks is more affordable than you might imagine. Considering the total cost of putting a car on the road, and Buick's traditionally high resale value, a fleet of Buicks isn't a luxury, it's smart business.

Ordering a fleet of Buicks means putting Buick's fleet department in your corner. With a growing, and glowing, reputation for personalized service and on-time delivery.

Ordering a fleet of Buicks is easy. Of course, you might wonder, which Buicks? Also easy: just contact your Buick fleet sales representative.

And order some peace of mind.

Buick Fleet Sales

WOULDN'T YOU REALLY RATHER HAVE A BUICK FLEET?

BUICK

...you're losing sales while your sales staff is hunting for keys, let Supra get you off the hook with Supra MAX.™ It keeps your sales staff on the lot selling, and it keeps your vehicles secure.

With the Supra MAX, your key remains safely with the vehicle. Only our Title® key can open the Supra MAX. And locksmiths are not equipped to duplicate Title keys. This one-key system eliminates losses, duplications, and confusing key boards. It's also the toughest and most durable automotive key box on the market.

So if you want the best key boxes made, give us a call about the Supra MAX and our other styles of auto key boxes. They'll keep your sales staff on the lot selling.

Unleaded gas prices to rise

Costs will deviate from usual seasonal pattern

As a result of new Environmental Protection Agency (EPA) regulations, unleaded gasoline prices can be expected to rise this fall instead of remaining static or dropping as they usually do, according to Runzheimer Reports on Transportation.

According to the industry newsletter, gasoline prices traditionally follow a pattern of rising in the warmer months as consumers drive more and demand goes up — March and April have already shown increases — and then leveling off and declining in the fall.

From early summer 1984 to mid-winter 1985 the price of self-serve unleaded gasoline dropped nearly a dime — 9.9 cents.

The forecast for the remainder of 1985, however, sees prices deviating from their usual seasonal pattern and rising into the fall and winter (see accompanying table).

The EPA's lead-phasedown regulations, which require refineries to reduce the amount of lead in their gasoline to 0.5 grams per gallon by July 1, 1985 and to 0.1 by January 1, 1986, is the reason for the predicted change in the normal seasonal price pattern. This phasedown will bring about a period of gasoline marketing experimentation and produce a variety of gasoline blends, according to Runzheimer.

In an effort to maintain high octane while reducing lead, the use of ethanol and methanol as octane enhancers will become more popular among gasoline marketers.

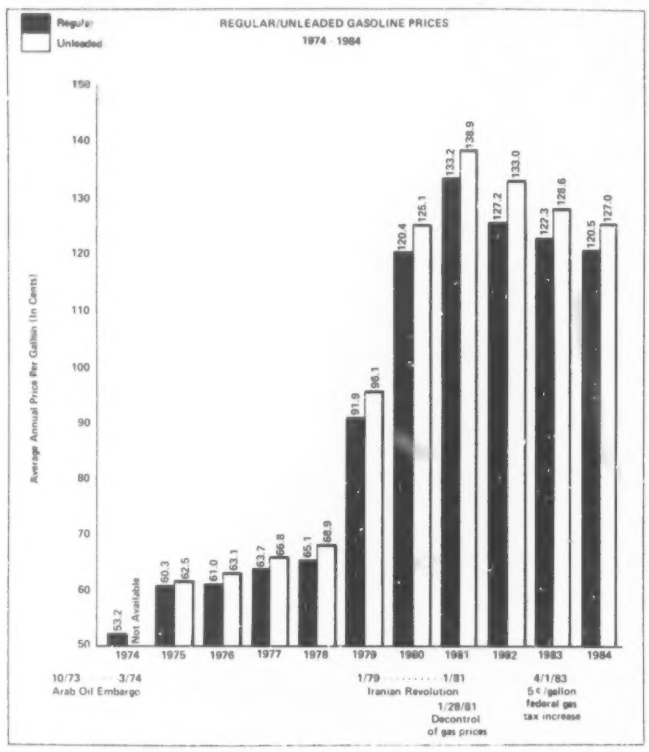
To compensate for loss of octane, refineries will have to increase imports of blending components and crude oil from which these components can be made.

Canada has also made plans to begin a lead reduction program in January 1987. Currently, three grams of lead per U.S. gallon is acceptable in Canada. However, most refineries use an average of less than two grams per gallon. When the regulations take effect, lead will be reduced to 1.1 grams per gallon.

In both countries the increased demand for high-octane unleaded gasoline and the changes gasoline producers will have to make will ultimately drive prices up several cents a gallon.

Self-Serve Unleaded Gasoline Prices

1984	
January	$1.223
February	1.214
March	1.208
April	1.212
May	1.221
June	1.224
July	1.216
August	1.207
September	1.201
October	1.202
November	1.201
December	1.194
1985	
January	$1.162
February	1.125
March	1.131
April	1.167



Gas prices fell again in '84

Motorists paid average of $1.24 a gallon

Gasoline prices continued their three-year decline with motorists paying an average of $1.24 a gallon in 1984, according to the American Automobile Assn.

Leaded regular gasoline at both full-service and self-service pumps averaged $1.21 a gallon during the year. Unleaded averaged $1.27 in 1984.

Gasoline prices have declined steadily since 1981, according to the motoring federation. Following the Arab oil embargo of 1973-74, prices rose sharply, reaching their highest point in 1981 when the average price hit $1.36 a gallon, with regular grade costing $1.33 and unleaded $1.39.

In 1982 the average price dipped to $1.30, and 1983 showed a further decline in the average price to $1.25 a gallon.

Compiled since 1973, the survey covers 6,000 service stations along major travel routes throughout the continental U.S.

Incentive

For travel agents

A new incentive plan enabling travel agents to earn $5 on completed rentals of a week or longer has been announced by Hertz.

The program is in effect during June, July and August. The extra payment applies to weekly rentals in excess of the travel agency's 1984 weekly rental production.

The extra $5 is in addition to the regular commission payment and in addition to the annual bonus commission schedule.

Dubbed the Summer Weekly Incentive Special, the new program applies to Hertz Affordable Weekly rates in the U.S., Canada, Europe, Africa, the Caribbean, Mexico and Asia/Pacific — in effect, worldwide.

Hertz has prepared a summary for each travel agency of the number of weekly rentals credited to that location last year.

Summer Weekly Incentive Special payments will be sent to travel agents in October covering the three-month period.

Fleet execs

Not all get vehicles

Do fleet executives get fleet cars? That was asked in a survey conducted by Runzheimer Reports on Transportation.

Ironically, only 33 percent of the responding U.S. companies and 22 percent of Canadian firms provide cars for their fleet executives.

The survey of both full and part-time executives reveals that the higher the corporate rank, the more apt a company is to provide a car to the executive responsible for fleet operations. Thus, all presidents, over three-fourths of vice presidents and over half of the directors receive what is presumably, at least in part, a perk.

Runzheimer notes that more than one-third of the managers and one-fourth of the supervisors, who are most apt to devote the majority of their time to fleet matters, also have a company-provided car.

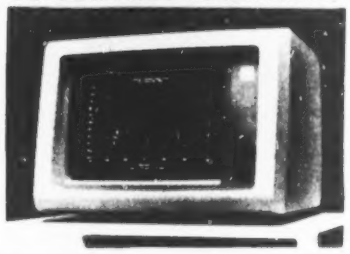
Fleet administrators are least likely to receive the car perk.

Here are the percentages by corporate rank of U.S. fleet executives whose companies provide cars for them: president, 100 percent; vice president, 78 percent; director, 56 percent; manager, 35 percent; supervisor, 25 percent; administrator, 8 percent; other, 37 percent.

Here are salary ranges of U.S. fleet executives provided with company cars: $20,000 or less, 10 percent; $20,001-$30,000, 16 percent; $30,001-$40,000, 28 percent; $40,001-$50,000, 41 percent; $50,001-$60,000, 48 percent; $60,001-plus, 75 percent.

TAKE ADVANTAGE OF PERSONAL COMPUTER TECHNOLOGY

TO CONTROL YOUR FLEET



Controlling a fleet means controlling the thousands of expense documents that a fleet creates. Organizing, summarizing, and computing cost effectiveness are what a computer does best. There is really no way any manual record keeping system can match the cost saving power of a carefully crafted computer software package. As a result such a package is the most cost effective investment an organization can make for its fleet.

Selecting a package at first may seem challenging and confusing. But, some key elements quickly become clear: (1) Is the package **designed by experts** that have many years of hands on fleet experience with an extensive variety of fleet types? (2) Is the package so **well thought out** that it can do things you may have not yet anticipated? (3) Is the package so **powerful and versatile** that it can do things its designers have not yet created . . . the ability for on-going creativity? (4) Does the package have the necessary computing horsepower to get the job done . . . a personal computer is low on horsepower and a conventional software package written in a language like Cobol, Basic, or Pascal just does not have the necessary UMPH to manipulate the many thousands of document records that a fleet accumulates. The **most powerful database handler available for a personal computer** is required to overcome this power deficiency.

Fleet Computing International answers all of these critical points and much more with our **FLEET CONTROLLER™**.

Compatible with the IBM Personal Computers series:
IBM PC IBM PC XT IBM PC AT

FLEET CONTROLLER™ . . . the standard in fleet control software.

truck personnel

Continued from Page 18

Combs had served Fruehauf as vice president-general counsel and secretary since joining the company in 1975.

Frank Coyer, Jr., who served as Fruehauf's principal financial officer since 1974 and as vice chairman-finance & administration since 1981, will continue to serve as vice chairman of the board of directors.

Succeeding Combs as vice-president and general counsel of Fruehauf is **Richard Darke,** who had been associate general counsel since 1979.

Replacing Darke as associate general counsel is **Patrick Lancaster** who was assistant general counsel.

Fruehauf Corp.'s Omaha, Neb.-based Liquid & Bulk Tank promoted **Richard Glazer** to director-plant operations and **Arell Wasson** to plant manager of the Omaha production facility.

Glazer, a 24-year Fruehauf veteran, will direct all four of the LBT Division's manufacturing plants. Wasson has been with the LBT Division 17 years.

Roy Howard was named director of product development for Fruehauf Division's engineering department. He joined the division after 13 years with Ford Motor's Light Truck Operations.

Fruehauf Division also promoted **James Koelker** to branch manager of the truck-trailer sales and service branch in Dayton, O., from used trailer manager at the Dayton facility.

And it promoted **Dale Mooty** to branch manager of truck-trailer sales and service in Oakland, Calif., from branch manager of the Illinois branch.

GMC Truck & Bus names financial exec

Harold Walton was named assistant comptroller for General Motors Truck & Bus Group. He had been director of engineering cost administration for the GM Chevrolet, Pontiac, Canada (C-P-C) Group.

James W. Kolp was named manager of plant and environmental engineering for Truck & Bus. Kolp, who had been general works engineer for GM's Buick, Oldsmobile, Cadillac Group, replaced **Robert Keller,** who retired.

Barry Michels was named manager of central operations engineering at Truck & Bus. **Thomas McLean**, master mechanic of engineering, replaced Michels as manager of supplier quality.

Volvo names Rabe head of bus group

Jan-Olof Rabe was appointed president and chief executive officer of Volvo Bus of North America, a Chesapeake, Va.-based division of Volvo of America Corp.

For the past five years, he headed Volvo's plant in Jakarta, Indonesia, where cars, trucks and buses are asembled for the Far East.

Allied names Frimer to Far East position

Allied Automotive promotedAndrew Frimer to director of market development for Medium and Heavy Vehicle Products, Far East.

He is responsible for direct marketing involvement with all Far East major truck OEMs,with a focus on export vehicles destined for North America aswell as vehicles built for the local Far East markets.

Fred Huegli was promoted to director, operations planning,Far East. He handles overall manufacturing operations,planning and coordination for all Allied Automotive joint ventures and subsidiaries in the Far East.

Iveco names Kostler to product quality post

Erhard Kostler was named senior project engineer at Iveco Trucks of North America, Blue Bell, Pa.

Among his new duties, Kostler will develop and implement an expanded quality assurance program for the company. He will provide engineering interface with key U.S. body builders, RV manufacturers and producers of multi-stop vans and buses.

Iveco said sales of its rail chassis to these manufacturers are expected to double in 1985.

PACCAR names Morie to legal position

PACCAR, Inc., named **G. Glen Morie** vice president, general counsel and secretary. He oversee the company's law department as carry out duties of corporate secretary.

Morrie joint PACCAR's legal department in 1973 and was appointed assistant general counsel in 1979. He was most recently general counsel and assistant secretary.

Rockwell names Neilson to new regional post

Rockwell appointed **David Neilson** regional manager for the midwest sales and service office in its On-Highway Products Operation.

Thomas McNorton was appointed national technical manager in the field sales organization of On-Highway Products.

Dina to introduce minibus in June

MEXICO CITY.—Diesel Nacional (Dina) has announced it will introduce its first lot of urban "minibuses" in June.

The State-owned firm did not specify the number of units to be produced for the home market. However, management reported that 1,000 of the compact buses will be built this year.

The minibus seats 23 passengers and has a 110-HP diesel engine. The firm hopes to sell them to Mexico City and other urban centers and to sell adaptations of the minibus to tourist agencies and for hauling light cargo.

Traffic fatalities rise for March, first quarter

WASHINGTON.—An estimated 3,333 traffic fatalities occurred in the U.S. in March, 1985, up 0.9 percent from 3,305 in the year-ago month, according to NHTSA figures.

Estimated traffic fatalities in the first quarter of 1985 were 9,041, 1.6 percent more than the 8,900 in last year's first quarter.

Commerce offers plan to increase exports to Japan

WASHINGTON.—A Commerce Department plan to promote auto parts exports to Japan was unveiled at a meeting here of the Automotive Products Export Council (APEC).

The date of the APEC meeting coincided with a Washington gathering of the Automotive Parts and Accessories Assn. (APAA) and a meeting of the Automotive Original Equipment Manufacturers, Inc.

The Commerce export plan provides for the sponsorship of a U.S. automotive exporters mission to Japan each year, assignment of a full-time Commerce staffer to aid the U.S. auto export effort to Japan and a continuing effort to find and negotiate the removal of Japanese barriers to U.S. exports.

APEC is a six-member association formed under Commerce Department auspices in 1980. It is composed of APAA, the Automotive Service Industry Assn., the Equipment and Tool Institute, the Overseas Automotive Club, the Specialty Equipment Market Assn. and the Truck Body and Equipment Assn.

145,587 cars built; year's total tops 3.7 million

Short week curtails auto output

By Louise Kertesz
Detroit Reporter

U.S. auto production of 145,587 units was down last week because of Memorial Day. The total was 14.81 percent less than the previous week's 170,902—but it was 8.42 percent better than the year-ago week's 134,276, also a holiday-shortened build.

So far this year, 3,726,384 cars have been assembled, 2.90 percent more than the 3,621,465 built last year at this point.

Last week's estimated output was shared as follows: General Motors, 58.29 percent; Ford Motor Co., 20.31 percent; Chrysler Corp., 15.39 percent; American Motors, 1.99 percent; Honda of America Mfg. Co., 1.68 percent; Volkswagen of America, 1.29 percent; New United Motor Mfg. Co., 0.58 percent, and Nissan Motor Mfg. Co., U.S.A., 0.47 percent.

A shortage of acceptable parts again halted Capri production at Ford's Dearborn plant during the week ended May 25. Since the problem had not been solved at presstime, it is unlikely that the 240 scheduled units were assembled last week.

General Motors scheduled two overtime shifts Saturday (June 1) at the following plants: Pontiac G; Fairfax, Kans.; Lakewood, Ga.; Lansing (No. 2); Detroit; Janesville, Wis.; Leeds, Mo., and Lordstown, O.

One overtime shift was planned Saturday at GM's Lansing No. 1 plant.

Ford scheduled Saturday overtime at its plants in Chicago and Lorain, O.

Daily overtime is slated at all Ford plants this week (June 3).

Chrysler has scheduled two 9-hour daily shifts this week at its plants in Belvidere, Ill., and St. Louis (Nos. 1 and 2).

Two 8½-hour daily shifts are planned at Chrysler's Jefferson (Detroit) plant this week.

Besse adds Car Division to duties as Renault chief

Continued from Page 1

the Truck Division has its own pattern for slashing its workforce, with 5,250 layoffs by the end of March, 1986. That would leave 22,300 jobs in the division.

Semerena's job change was made "at the request of Semerena and with his agreement," according to an internal note from Besse.

The "president-directeur general" in a French company is equivalent to both chairman and president in a U.S. company. At Renault, the head of the Car Division was considered number two in the management hierarchy and was given major responsibilities. Hanon spent several years there before being appointed to the top job.

By this move, Besse seemed to confirm that he is not a man to share his power at the head of a company plagued with arduous problems.

The unions said they expect the worst is yet to come, according to the Financial Times.

Renault is talking with banks in an effort to restructure medium- and long-term loans amounting to 40 billion francs (about $4.3 billion), the Financial Times said. Renault also is talking to the French Government about increasing its annual financial endowment. It now receives 3 billion francs a year (about $320 million).

Renault is continuing to sell its assets and seems to be getting out of the high-tech field as part of a major restructuring.

As for Renault's operations in the U.S. and, more specifically, its link to American Motors, nothing has been announced in France since Besse sent AMC a commitment letter last month.

Unofficially, it is reported that Renault has no plans to pull out of its North American ventures, but it wants AMC to become self-supporting, cut its costs and restructure its operations by its own means.

Apart from cutting its own expenses dramatically, Renault will seek joint ventures with other manufacturers to achieve economies of scale on major components, the company reported last week.

Renault does not believe the European car market will provide any opportunity to increase its production within three years. It is confident, however, that its renovated car range will help preserve or improve its market share by 1986.

By that time, Renault will have replaced the 18 model with a new compact sedan and will have completed the new 5 range with a diesel version.

Early last week, the company launched in France a lenghtened, five-door version of its supermini.

Renault's market share in Europe for the first quarter was 11.0 percent, compared with 10.7 percent last year. Since the total market was down 1.7 percent, this meant only a small volume increase of some 1.25 percent—and margins in Europe have reportedly become very low for most volume manufacturers.

Holiday trims truck production by 10,000 units

Domestic truck makers scheduled production of 61,505 units during Memorial Day week, 14.25 percent fewer than the previous week's 71,725, but 16.31 percent better than the year-ago week's 52,882 (also shortened by the holiday).

Ford Motor Co.'s St. Louis plant, which is building the Aerostar minivan, started production last week. The first units are due off the line at the end of this week.

General Motors scheduled two overtime shifts Saturday (June 1) at the following plants: Janesville, Wis.; Lordstown, O.; St. Louis, and Pontiac (No. 5).

One overtime shift was scheduled Saturday at GM's Flint (No. 2) plant.

Ford planned Saturday overtime at its Kansas City, Norfolk, Twin Cities and Louisville plants.

All of Ford's plants but St. Louis are scheduled to work daily overtime this week.

Chrysler Corp.'s Warren (Mich.) plant is scheduled to operate two nine-hour daily shifts this week (June 3).

Canada builds 26,181 cars; best in 2 years

Rebounding from a holiday period, Canadian car manufacturers planned to build 26,181 cars last week, 28.58 percent more than the 20,361 assembled during the previous work week (shortened by Victoria Day), and the highest weekly output since the week ended May 14, 1983, when 27,994 cars were built.

Last week's scheduled output was 4.34 percent more than the year-ago week's 25,091.

Truck makers planned production of 19,161 units last week, 12.30 percent more than the previous week's 17,062 and 13.44 percent more than the year-ago week's 16,891.

Year-to-date, 389,823 trucks have been built, 6.71 percent more than the 365,325 assembled last year at this time.

60th year—$45 per year, $1.00 per copy

GM to begin 1986 intros on Sept. 26

By Edward Lapham
Marketing Editor

General Motors will officially kick off the 1986 new model season this fall with public introduction of its carryover models Sept. 26.

GM's restyled F-body Pontiac Firebird and Chevrolet Camaro also will be introduced Sept. 26, but GM's newest cars won't go on sale until Nov. 14.

Chrysler Corp., with no all-new products, will launch its entire lineup on Oct. 1.

American Motors, with a new two-wheel-drive Jeep XJ (downsized Wagoneer) and XJ-size Comanche pickup, also will introduce its 1986 models on Oct 1.

Ford Motor Co. has established Oct. 3 as its official public intro date for all its 1986 Ford and Lincoln-Mercury models.

Ford Division said its Oct 3. date is firm, even for the all-new Taurus, although L-M said the Sable date is "tentative."

GM's divisions will stagger the intro dates for all-new products again this year.

The new E-cars—Cadillac Eldorado, Buick Riviera and Oldsmobile Toronado—will be introduced Nov. 14, as will the K-body Cadillac Seville.

Also scheduled for public introduction Nov. 14 are the new H-cars, which replace the old B-bodies.

The H-bodies are Buick LeSabre and Oldsmobile Delta 88.

The new D-body Cadillac Fleetwood Brougham is tentatively scheduled for introduction in January, although the division has not yet fixed an exact date.

Chevy's late light hope

Jim Dunne

L-body for 1987

Chevrolet's 1987 L-body, high-volume newcomer to the lineup, will be offered in two-door Baretta (above) and four-door versions. Chevy plans to build some 400,000 of the L-body cars annually. With a unique body style, not shared with other General Motors divisions, the car is a key to Chevrolet's late-1980s marketing program.

Compromise plan on fleet subsidies runs into buzzsaw

By John A. Russell
New York Staff Writer

NEW YORK.—A compromise proposal for a federal law on fleet subsidies has drawn fire from dealer groups, including the Ford Dealers Alliance.

The compromise was worked out by NADA and the office of Rep. John Dingell, Michigan Democrat. It will be presented to the NADA board of directors this week for its approval.

The compromise would not outlaw the two-tier pricing structure and would contain a provision that would prohibit individual states from enacting legislation on that critical issue.

Ed Mullane, president of the Ford Dealers Alliance, termed the proposed compromise a "sellout." He has sent a letter voicing his opinions to all NADA directors, asking them to reject the proposal.

"It's a betrayal of the faith we dealers have in NADA," Mullane said. He added that "it strips the dealer naked of his rights and, by the preemption clause, makes sure he stays naked for his lifetime."

Charles Walton, executive vice president of the New Jersey Automobile Dealers Assn., termed it "grossly unfair." The leadership of the NJADA voted 54 to 1 last week to advise its NADA director that the association found the proposal "unacceptable."

The New Jersey dealer group asked its NADA director to vote against the proposal when it comes before the NADA board at its meeting in Colorado Springs.

The issue came to the forefront after Frank McCarthy, NADA executive vice president, and James Jennings, 1984 NADA president, disclosed the compromise in a meeting with the New Jersey leadership. Mullane also attended the meeting and made a presentation against the compromise.

The compromise bans bootlegging, sets retention periods for lease and rental cars and offers equal subsidies to dealers on an individual basis, but it does not address two-tier pricing, which permits huge fleets to buy cars for considerably less than the price at which the dealer buys. The compromise does include the preemp-

Feasibility study completed, but talks will be lengthy

Ford, Fiat get down to details

By Richard Feast
European Editor

TURIN, Italy.—The Fiat-Ford feasibility study on collaboration has been completed, and the companies have begun detail negotiations, according to Cesare Romiti, managing director of Fiat S.p.A.

But Romiti warned that the negotiations will be lengthy. "A deal is not imminent, and it is hard to say at this stage whether negotiations will be completed before the end of the year or whether they will continue into next year," he said.

Neither Fiat Auto nor Ford of Europe has identified the exact nature of any collaboration, but the outcome is now widely expected to be of far-reaching significance. Romiti ruled out any joint deals with Japanese companies.

"The Japanese have cost advantages, but I think the way we go about making cars is more advanced," he said.

Romiti said Fiat and Ford got together because their product ranges are complementary and because each has a strong presence on the European market.

The secrecy surrounding the negotiations has led to intense speculation over their exact content. But Italian sources suggest the protracted nature of the negotiations is being caused largely by Ford.

Leading Ford of Europe executives, including Chairman Robert A. Lutz, have been dropping heavy hints all year about general overcapacity and the need to cut labor costs. At the Geneva Auto Show last March, Lutz said decisions would have to be made by this month.

Ford's main auto assembly plants in Europe are in West Germany, the U.K., Spain and Belguim—although it is estimated

Purchase is latest move in Smith's diversification program

Hughes gives GM another hedge against auto cycles

By Majorie Sorge
and Michelle Krebs
Automotive News Staff

NEW YORK.—General Motors' $5-billion-plus acquisition of Hughes Aircraft Co. gives the auto company another hedge against the cyclical automotive business.

More than any links between the automotive and aerospace

Related stories on Page 2.

fields, the Hughes purchase offers GM more of the diversification Chairman Roger B. Smith has been searching for since taking over the GM helm in 1980.

Before Smith, GM hadn't made an acquisition since it bought a road machinery company in 1953. Instead, it had sold off non-automotive operations.

During Smith's reign, GM has purchased Electronic Data Systems, Inc., in a $2.5-billion deal. GM also has initiated a joint venture with a Japanese robotic and computer firm and has taken minority positions in six high-tech companies specializing in machine vision or artifical intelligence.

Now, GM has purchased the once privately held, highly-sought-after Hughes Aircraft from the Howard Hughes Medical Institute for $2.7 billion in cash and 50 million shares of a new class of stock. GM also will issue an additional 20 million shares of Class H stock in the next three years.

Auto analyst Maryann Keller, of Vilas-Fischer Associates, said the Hughes buy was a move to diversify plain and simple, despite Smith's claims that Hughes' technology will help GM in building automobiles.

"An acquisition is worthwhile only if it stands on its own," Keller said. "There might be something to come of it (in automotive technology), but I don't think it will happen in the short run—not in the next five years—and it was not their reason to buy it."

She called the deal "brilliant," since GM is paying only part—$2.7 billion—in cash.

Analyst David Healy, of Drexel, Burnham, Lambert, Inc., disagreed, calling it "a modest diversifcation carrying a large price tag." He said GM could develop automotive electronics without such a large acquisition.

At the announcement of the Hughes purchase, Smith defended the price GM paid, telling reporters that the last time he looked "in the little green box," there was still plenty of money left. GM closed 1984 with more than $8 billion in cash reserves and marketable securities.

GM's acquisition of Hughes is apt to first impact GM's data processing subsidiary, EDS, rather than the car-driving public or the factory floor.

GM and EDS have said they must launch satellites for their worldwide communications needs. Hughes has built 60 percent of the commercial communications satellites now in operation and provides wide band services to the entertainment, cable television and telecommunications industries.

Hughes Communications, Inc., a subsidiary of Hughes Aircraft, provides satellite capacity to the U.S. Navy. EDS has an eight-year Navy contract to integrate its data processing.

breaking news

Fiat car group triples profits

TURIN, Italy.—The Fiat Group's results improved sharply last year. Most sectors improved, led by a threefold increase in net profit for the Fiat Auto Division, to the equivalent of $119 million. The group's sales rose 8.17 percent to $12.06 billion, and after-tax income rose 147 percent to $317 million.

Mitsubishi to sell 30,000 Hyundais in U.S.

LOS ANGELES.—Mitsubishi Motor Sales of America will market 30,000 Hyundai Excel cars during the 1987 calendar year, Automotive News has learned. Hyundai officials confirmed the agreement last week and MMSA President Tohei Takeuchi reportedly sent letters to dealers outlining MMSA's intent. Mitsubishi Motors Corp. and Mitsubishi Corp., of Japan, own 15 percent of the Korean auto maker.

Metzenbaum, others introduce resolution

Senators oppose CAFE rollback

By Jake Kelderman
Washington Reporter

WASHINGTON.-General Motors, Ford Motor Co. and some other auto makers may think that rolling back fuel-economy standards is a good idea, but Senator Howard Metzenbaum, Ohio Democrat, doesn't.

He and three of his Senate colleagues introduced a resolution last week urging retention of the current 27.5-MPG CAFE requirement.

Said Metzenbaum, "This resolution is an attempt to send a signal to both the Administration and the auto companies that this body has not walked away from its responsibility and doesn't think they should either."

NHTSA is expected to act soon on a petition from GM, Ford and others to roll back the requirement to 26 MPG on the grounds that the higher standard is not needed; that consumers want larger cars, and that because of increased competition in the small-car market, U.S. makers simply cannot sell enough of their smaller, more-fuel-efficient models to offset consumer demand for larger, less-fuel-efficient cars.

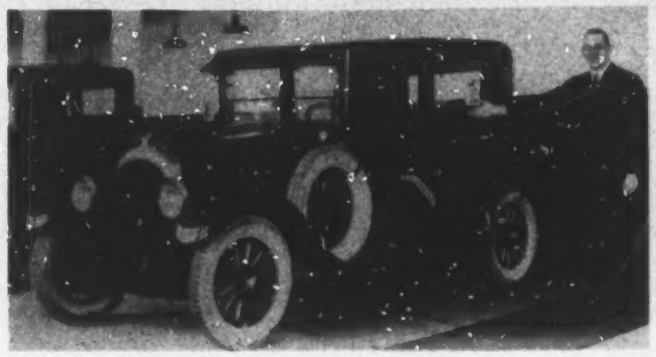
The CAFE law permits a rollback of the standard from 27.5 MPG to 26 MPG by administrative fiat and, according to sources, Transportation Secretary Elizabeth Dole has given assurances to the makers that it will be done.

Metzenbaum thinks that would be an "irresponsible" act, warning in his resolution that "The next energy crisis could develop overnight."

Congress, the Administration and the auto industry have a responsibility to do all that can be done to ensure America's security when the next crisis inevitably strikes, he added.

Metzenbaum, who was joined in his resolution by Senators Daniel Evans, Washington Republican; John Danforth, Missouri Republican; Thomas Eagleton, Missouri Democrat, and 15 others, called his resolution a "gentle nudge." But he also warned,"We may find it necessary to take legislative action in the future if the Administration and the auto companies don't turn around."

Resolutions are not binding on the Administration, but they do indicate the feelings of the senators who sign them. This resolution shows that not everyone in the Senate is in favor of rolling back the CAFE requirements.



60th for Chrysler

Chrysler Corp. celebrated its 60th anniversary June 6 with a show that included fireworks and the Goodyear blimp at its proving grounds. Chrysler Vice Chairman Gerald Greenwald cited the similarities between founder Walter P. Chrysler (above) and current Chairman Lee A. Iacocca (below), both chairmen who turned ailing companies around. Greenwald also said he expected Chrysler could duplicate or better its 1984 pre-tax record profits in 1985.

Flat Rock auto will be a 626 type

One car platform for Mazda plant

By Richard Johnson
Detroit Reporter

Mazda Motor Corp. has no immediate plans to build more than one car platform at its assembly plant in Flat Rock, Mich., even though company officials have said they want production flexibility at the site.

According to Osamu Nobuto, president of Mazda Mfg., (USA), initial plans call for a single platform at the new $450 million facility located south of Detroit.

Mazda executives have declined to identify which car will be built at the new plant adjacent to Ford Motor Co.'s abandoned Michigan Engine Casting plant. But during an informal interview after the recent Flat Rock groundbreaking, Masahiro Uchida, executive vice presidenty and secretary treasurer, Mazda Mfg., (USA), said the Flat Rock car will be a "626-class vehicle."

Company officials have said they desire the same flexibility at Flat Rock that they have at the highly automated Hofu plant in Japan, which opened in October, 1982. At Hofu, Mazda is capable of producing nine different bodies on three entirely different platforms.

But during a brief interview after the groundbreaking ceremonies, Nobuto declined to confirm plans for multiple-platform production at Flat Rock.

"Basically, we'll be producing one platform," he said through a translator. Asked if that will hold through the remainder of the decade, Nobuto said "at least until we are pretty much settled down."

Production at Flat Rock is due to begin in the fall of 1987. The manufacturing facility will ultimately employ 3,500 persons and produce 240,000 vehicles annually.

Besides the compact 626 series, Mazda is selling the RX-7 sports car and the GLC subcompact in the U.S. The company is also believed to be interested in importing the next generation of its upscale 926/Luce series and there has been industry talk of a Mazda minivan arriving by 1987.

Mazda is negotiating to sell Ford part of the plant's production capacity. During a recent interview with Automotive News, Louis Ross, Ford executive vice president for North American Automotive Operations, said Ford will probably buy between 40 and

Mazda Michigan sets early '87 'trial run'

By Francis J. Gawronski
Tokyo Bureau Chief

OSAKA, Japan.—Mazda Motor Corp.'s new plant in Flat Rock, Mich., will initiate trial runs in the spring of 1987 and start assembling cars in the fall of that year at a monthly rate of 3,000.

According to Moriyuki Watanabe, Mazda chairman, the company will gradually increase production so that a year after start-up, the plant will be producing 20,000 cars a month.

He also said that during the first year of production, the firm will sell the cars with Mazda brand names and that from the second year it would start supplying more than half the cars produced at the plant to Ford Motor Co., which has a 25 percent slice of Mazda.

The Mazda chairman said the company plans to increase its dealer network in the Eastern section of the U.S. and particularly wants to expand the number of dealers selling Mazda exclusively. Most of the 750 Mazda dealers in the U.S. are in Midwest states, he said.

He also announced that Mazda plans to hire several American managers to expedite employment of auto workers at the Flat Rock plant, expected to reach more than 3,000 at full operation.

Jobs before concessions, Majerus says

Security first, UAW tells AMC

By Marjorie Sorge
Labor Editor

MILWAUKEE.—The UAW must get job security promises from American Motors before it will agree to a concessions contract for workers at the company's two Wisconsin auto plants, according to UAW Secretary-Treasurer Raymond E. Majerus.

The company and the union began negotiations last week in an attempt to avert closing of those operations.

AMC has told the union it needs concessions. The company issued plant-closing notices May 24 for its assembly plant in Kenosha and its stamping operation in Milwauke and has said it will close those operations within the next 13 months if the two UAW locals representing the plants do not agree to concessions contracts that will make AMC more competitive.

Concessions sought by AMC include lower wages, fewer union representatives, fewer paid days off and a new contract that tracks the General Motors/UAW pact negotiated last year.

The Kenosha plant is scheduled to close in July, 1986, and the Milwaukee operation will close this September if a more-competitive contract is not reached, AMC has said.

Hourly labor costs in Kenosha are $4 an hour higher than in similar operations at General Motors and Ford Motor Co.

One problem is that the Kenosha plant is an old, six-story mattress factory, and many workers feel it is just a matter of time before AMC closes it regardless of the concessions made in this round of bargaining. One union negotiator indicated that even if the labor cost at Kenosha is reduced substantially, it is unlikely that the plant could be made much more efficient even with more high-tech equipment.

AMC and the UAW have agreed to set aside disagreements over an unfair labor practices complaint filed with the National Labor Relations Board by Kenosha Local 72. The complaint alleges that AMC acted unlawfully in setting pre-conditions before it would agree to bargain.

In a letter to Majerus, Richard Calmes, AMC industrial relations vice president, said Local 72 "misrepresented the company's position to the NLRB."

He also said that AMC never had any pre-conditions for meeting or negotiating.

In a May 3 letter from Calmes to Majerus, AMC said the union must agree to 17 points in any new contract.

Peugeot drops plans to build coupe in U.S.

By Dan McCosh
Detroit Reporter

Peugeot has quietly dropped a plan to assemble a coupe version of the 505 in the U.S., a program that would have been a milestone in the revival of independent coachbuilding in this country.

Peugeot had been negotiating with Brighton (Mich.)-based Cars and Concepts to assemble a luxury coupe for Peugeot, Automotive News has learned. The project, which reportedly would have meant assembling about 4,000 units a year of the $20,000-$30,000 sports coupe from components supplied by Peugeot in France, would have been one of the most elaborate assembly operations undertaken in recent times by an independent coachmaker.

In the 1920s, many auto manufacturers built chassis for bodies designed and built by independents. The manufacturers bought up many of the coachmakers, and many went out of business during the depression.

Today, custom bodies are made by several companies, primarily for limousines and ambulances. Hess & Eisenhardt Co. started up a regular assembly line for Cadillac limousines this spring in Troy, Mich. But the Cars and Concepts Peugeot would have been the first generally distributed passenger car assembled by an independent in recent years.

A Peugeot spokesman confirmed the "design study" for the coupe was recently canceled. Sources close to the program say the rapidly increasing number of similar cars heading for the market in the next few years prompted the cancellation for marketing reasons.

Cars and Concepts still plans to assemble a car in Brighton, according to Chairman Richard R. Chrysler. He told Automotive News he may have a similar program underway as early as this fall, but declined to identify the manufacturer.

Domestics steady; imports set record

May new-car sales highest since 1978

By Jenny L. King
Detroit Reporter

New-car retail sales in May were the highest since the boom year of 1978, with domestics just matching the year-ago number and imports marching ahead 7.72 percent and notching a sales record for the month.

Imports accounted for 24.52 percent of the market, up more than a percentage point from the 23.26 percent they earned in May of 1984. Import sales have been up in four of the five months thus far in the 1985 calendar year.

The grand total of 1,069,934 was up 2.21 percent from May's 1,046,805 a year earlier and best since 1978 when 1,159,185 new cars were delivered.

The total included 807,590 domestics, up 0.54 percent from 803,273 the preceding year, and 262,344 imports, up 7.72 percent from 243,532 in May, 1984.

The previous import sales high for the month was 255,495 in the pre-restrictions year of 1979. Deep

Where auto market was, May, 1985

	Total Sales	Pct. of Total

IMPORTS	262,344	24.52
TOTAL	1,069,934	100.00

est import market penetration for May was 28.58 percent in 1981.

Industry year-to-date sales of 4,705,146 were up 3.97 percent from 4,525,509 in 1984. Domestics for the five months numbered 3,637,733, up 3.38 percent from 3,518,700. January-May import sales were up 6.02 percent, to 1,067,413 from 1,006,809.

Buoyed by a strong mid-month period, when sales were up 18 percent, the U.S. auto makers made the best of limp first and third periods to accumulate a sales total of 807,590. (May 1-10 sales were down 8.61 percent, May 21-31 sales were down 4.79 percent.)

Ford Motor Co.'s 9.29-percent sales increase was the best of the Big Three. Chrysler Corp. was up 3.27 percent and General Motors dropped 2.86 percent year to year.

Ford dealers reported sales of 194,547 new domestic cars in May compared with 178,006 a year earlier. Chrysler was up 3.27 percent, to 97,981 from 94,880. GM slipped some 14,000 units, down 2.86 percent to 479,554 from 493,670.

Honda, well-established as the number-four auto maker in terms of sales, was up 22.08 percent in May, to 15,096 from 12,366. American Motors was off 33.49 percent, to 10,063 from 15,131.

Volkswagen's sales of 8,088 U.S.-built Golfs were down 12.28 percent from 9,220 Rabbits a year ago. Nissan reported second-month sales of 2,261 as its Smyrna (Tenn.) car lines picked up speed.

Ford, whose Ford Division boasted highest any-month sales for Escort, climbed almost two percentage points in domestic market penetration, to 24.09 percent from 22.16 percent. Chrysler moved up to 12.13 percent from 11.81 percent. Honda was up to 1.87 percent from 1.15 percent.

GM dipped down to 59.38 percent from 61.46 percent. AMC held a modest 1.25-percent share of the May domestic market, down from 1.88 percent. VW had 1.00

Ford auction nets $4,908,100

Jim and Barbara Wheatley, owners of the Harrisonburg (Va.) Auto Auction, present the check for what is believed to be the largest dollar volume ever for a Ford Factory sale to Joe Harde, center, of Ford Motor Co. During the sale, 505 factory cars and trucks were sold for $4,908,100 to the 135 dealers in attendance.

Ford recalls 515,000 cars; safety group wants more

WASHINGTON.—Ford Motor Co. is recalling 515,000 1982-83 Escort and Lynx cars to fix rear seat belts that twist and bind, which prevents them from retracting properly.

The Center for Auto Safety criticized the extent of the recall, saying it should have included as many as 250,000 additional Escort and Lynx models manufactured during the 1984 model year.

A Ford spokesman said the company had modified the seat-belt design in 1984 models and that complaints involving 1984 vehicles were significantly fewer than on the 1982-83 Escort and Lynx.

The center countered Ford's explanation by citing a technical service bulletin issued to Ford dealers on 1983-84 Escort/Lynx models. The bulletin said that a new "seat-belt guide" had been developed "that allows the belt to retract without twisting," the center reported.

The center said that Ford "added a stronger rewind spring and relocated the opening in the retractor boot" on May 28, 1984, and "added a clip to its retractors to reduce the size of the belt opening in the guide" on June 5, 1984.

Those changes occurred late in the 1984 model year. The center said it has continued to receive complaints about rear-seat-belt binding on 1984 Escort and Lynx models and that NHTSA has recieved similar complaints.

Ford privately disclosed the recall decision in a letter to NHTSA dated May 15, 1985. NHTSA had petitioned Ford for a recall in April after a March letter from the safety center urged NHTSA to issue a recall request.

A Ford spokesman said the recall was to be made public after delivery to dealers of the necessary parts. Ford said past recall notices have led to vehicles being brought prematurely to dealerships for service.

In the past few years, safety groups and others have faulted auto makers and NHTSA for not issuing timely public recall notices once a recall decision has been made. Safety advocates have long argued that in order to avoid needless injuries, consumers must be made aware of product defects as rapidly as possible, whether or not an immediate fix is available.

Bill would limit tint of windows

RALEIGH, N.C.—A bill that would impose limits on the darkness of windows in automobiles has been introduced in the State Legislature by Senator James Johnson.

Johnson's bill would make it illegal for a person with a North Carolina driver's license to drive an automobile in the state with windows darker than were originally installed by the manufacturer. Automobiles with dark windows installed before Oct. 1, 1985, would be exempt from the bill.

Johnson said dark windows cause accidents because at night they make other cars seem farther away than they actually are. He also said they induce thieves to break into parked vehicles because thieves think the dark windows are hiding valuables.

Lakeland Auto Auction holds 6th marathon sale

LAKELAND, Fla.—Lakeland Auto Auction has completed its sixth marathon sale, Marathon VI, which consisted of a large and diversified consignment from Ford Motor Co.; Ford Motor Credit Co.; major fleet, lease and daily rental companies, and hundreds of new- and used-car dealers.

Sixty-six percent of the registered vehicles were sold. Ford Motor sold 100 percent of a 425-unit consignment.

Auctioneer travels

Sam Lafata, left, president of Aptco Auto Auction, Taylor, Mich., visited Japan and met with Tatsuo Takagi, president, Nissan Prince Osaka, Ltd. Takagi has 27 Nissan dealerships and one auto auction in Japan. Lafata gave Takagi a picture of Lee Iacocca and an American flag.

Domestics steady; imports set record for month

May auto sales highest since 1978

Continued from Page 6

percent this year compared with 1.54 percent in 1984, and Nissan captured the remaining 0.28 percent of the recent market.

Minus signs outnumbered pluses in the sales outcomes for the 16 domestic makes. Pontiac stole the limelight, reporting a record May total of 88,538, which represented an increase of 16.38 percent from 76,076 a year ago. Pontiac said its sales have been up 25 of the last 26 months

Other winners included Chrysler, up 19.70 percent; Dodge, up 3.65 percent; Ford, up 18.05 percent; Cadillac, up 2.89 percent, and Honda, up 22.08 percent.

The record import total included individual best-Mays for Audi, BMW, Jaguar, Mercedes-Benz, Saab and Toyota. Toyota was the runaway sales champ, up 15.44 percent to 69,846 units. Mercedes was up 22.72 percent, Jaguar was up 6.92 percent, Audi was up 5.64 percent, BMW was up 6.85 percent and Saab climbed 31.17 percent.

VW combined import and domestic sales of 24,152 were up 10.50 percent from 21,858 in May a year earlier and were best for any month since August, 1981, according to Volkswagen of America.

Imports took a back seat to domestic intermediates in the May market-class breakout. Intermediates earned 29.11 percent, imports had 24.52 percent, compacts accounted for 16.05 percent, subcompacts had 14.14 percent, standards had 8.87 percent and luxury models claimed the remaining 7.31 percent.

Excluding imports the market-class spectrum looked like this: Intermediates had 38.56 percent, compacts had 21.27 percent, subcompacts had 18.73 percent, standards had 11.76 percent and luxuries had 9.68 percent.

With 26 selling days in the month both this year and last, the 1985 daily selling rate for domestics of 31,061 was up 0.54 percent from 30,895 last year.

Late-May domestic sales were down 4.79 percent, to 322,049 from 338,236. The daily rate of 35,783 dropped 4.79 percent from 37,582. There were nine selling days in the period each year.

Ford Motor Co. and Honda were the only domestics to post third-period sales gains: Ford was up 8.01 percent and Honda climbed 38.58 percent. GM was off 8.96 percent, Chrysler was down 9.63 percent, VW skidded 21.76 percent and AMC plunged 33.45 percent.

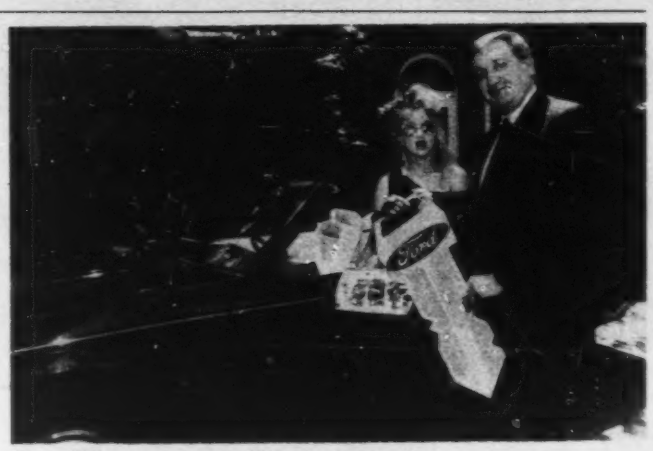
GM earned 58.04 percent of the May 21-31 market, Ford had 24.48 percent, Chrysler had 11.52 percent, Honda had 2.88 percent, VW had 1.35 percent, AMC had 1.28 percent and Nissan earned 0.45 percent.

Nissan to buy Yue Loong share

TAIPEI, Taiwan.—Taiwan's economic ministry has approved an application by Nissan Motor Co. to buy 25 percent of Yue Loong Motor Co. for $65 million through the purchase of Yue Loong stock.

Yue Loong, Taiwan's largest automobile manufacturer with an annual output of 60,000 units, has cooperated with Nissan for 25 years in the production of cars for sale in Taiwan.

According to Yue Loong, the Japanese auto maker's investment would enable the company to expand annual output at least 20 percent.



Cyndi Lauper gets Mustang ragtop

Pop star Cyndi Lauper, named best new artist in Rolling Stone magazine's 1985 Readers Poll, is awarded a 1985 Mustang convertible by Robert A. Lusko, Ford Division's New York district manager, at a luncheon at New York's Tavern on the Green Restaurant. Ford Division sponsored the Rolling Stone poll in which 7,500 readers named Lauper the year's best new singer.

Mullane calls NADA plan a 'sellout'

Fleet-subsidy compromise attacked

Continued from Page 1

tion clause.

In a telephone interview with Automotive News, McCarthy termed the proposal a draft which has to be approved by NADA's Government Affairs Committee and the board.

However, he flatly stated that some sort of preemption would be in the compromise. The question was how great this would be. Dingell apparently wants a clause that would completely ban the issue at the state level and, in effect, abrogate existing state laws. NADA is trying to retain existing laws but would go along with banning future legislation.

However, whatever form the preemption clause takes, McCarthy said it "would have to be included since Dingell feels strongly about it."

Dingell, chairman of the House Energy and Commerce Committee, effectively blocked last year's bill, H.R. 5305, which included a ban on two-tier pricing.

The bill never reached the house floor and, according to sources, Dingell said it never would as it existed. His refusal to release the bill led to its dying in committee and to this compromise.

Mullane was enraged at the compromise proposal. "The morality of it shocks me," he said, adding that "they (NADA) are supposed to represent the dealers." He predicted that there would be a classic "shootout" on this proposal.

Walton agreed. He said his board believed that "any bill that doesn't address pricing is not a compromise."

He added the New Jersey dealer group members who heard the presentation by McCarthy and Jennings "got violent" on the pricing and preemption clause and termed it "grossly unfair."

Mullane and Walton said they do not feel that bootlegging and retention are issues now since all the manufacturers have indicated they would insitute methods to police that activity on the part of lease companies.

Since this issue of fleet subsidies was resurrected three years ago and the move was made to halt subsidies by federal legislation, pricing has been a core issue, and Mullane has been at the forefront of the battle.

He said the large fleets buy their cars $1,000 to $2,000 below dealer cost. Mullane told the NJADA board, "If we don't stop it, that price edge will continue to grow, taking an ever-larger share of the market and eroding the value of our franchises even further."

In his letter to NADA, Mullane said the fleet share of market has jumped from 8 percent in 1965 to 25 percent today. He said in certain cars lines, the fleets get 50 percent of the build.

He warned that if the NADA accepts this compromise and it is passed by Congress, "we will have two-tier pricing baked into law."

Mullane said the answer is federal legislation addressing two-tier pricing without the preemption clause or state legislation letting manufacturers fight on 50 fronts.

He also asserted that NADA has said this issue does not impact the consumer, but he said the FDA will prove that it does. The FDA has contracted with Mathtech, a division of Martin Marietta Data Systems, to study the impact of two-tier pricing on the consumer.

Mullane has often said that this pricing structure forces consumers to pay more for their cars since dealers don't get the same subsidies as fleets.

In an interview with Automotive News, Mullane angrily called the compromise "anti-dealer, anti-small business and anti-consumer."

He promised that if NADA accepted this proposal, it would have active opponents who would fight the bill tooth and nail if it is introduced—Ed Mullane and the FDA.

He added that those who drafted the compromise say Congress won't vote for it unless the preemption clause is in the bill.

"They have gutted the bill at the request of the manufacturer by eliminating the central plank and then they drive a spike in our collective hearts by this preemption clause to make sure the issue never rises again in state legislation," he said.

The New Jersey dealer group apparently is in Mullane's corner on this issue.

McCarthy, indirectly referring to the opponents, claimed it was "awfully easy to get headlines," and added that the real question is "how strongly do the dealers feel."

But the decision on this issue does not rest with the rank and file dealers; it rests with the NADA Government Affairs Committee and the NADA board of directors.

Ford and Fiat talk on details

Continued from Page 1

that Spain, with its low labor costs, will escape any worker reductions.

Shedding manpower in other countries takes on enormous political dimensions, however. Ford will be tempted to keep production wherever it is financially most advantageous to do so, and that means delicate negotiations with governments.

Even after formalizing the restructuring plan, Ford will face the long process of implementing it. While that is uncertain, progress in the Fiat talks must be slow.

Fiat, meanwhile, has its house in relative order following the restructuring of the early 1980s. It recently reported an all-around improvement in its finances, which included a threefold after-tax increase in profits in the passenger-car-making division, to $119 million.

Mazda to build only one platform at Flat Rock

Continued from Page 3

60 percent of Flat Rock output.

He said Mazda will build a specialty car for Ford, slightly smaller than Mustang, to supplement, rather than replace the rear-wheel-drive Mustang.

Uchida said negotiations are continuing with Ford, which owns 25 percent of the Japanese company.

"Our plan is to get an agreement by, say, October or November of this year," he said.

Uchida declined to say specifically what vehicle Mazda will produce at Flat Rock.

"I can't say yet what kind of vehicle we are going to market with," he said. "I can say only that a 626-class vehicle will be produced there."

The vehicle will share some components with the Ford car and will be made on the same assembly line. Uchida repeated Mazda's contention that it is aiming at 50 percent U.S. content in the vehicles.

Month's build of 779,942 was highest this year

May car output best since 1979

By Louise Kertesz
Detroit Reporter

Domestic auto production of 779,942 units in May was the highest for that month since 1979, when 935,198 cars were assembled.

Last month's total—the best output of any month this year—was up 3.01 percent from April's 757,116 and was 9.39 percent better than the year-ago month's 712,979.

Manufacturers planned to build 173,325 cars last week, 21.83 percent more than the 142,273 produced during the previous week (shortened by Memorial Day) and 5.47 percent more than the year-ago week's 164,341.

So far this year, 3,896,395 cars have been assembled, 2.91 percent more than the 3,786,104 built last year at this point.

Companies shared last week's estimated production as follows: General Motors, 56.51 percent; Ford Motor Co., 19.46 percent; Chrysler Corp., 17.71 percent; American Motors, 2.11 percent; Honda of America Mfg. Co., 1.82 percent; Volkswagen of America, 1.08 percent; Nissan Motor Mfg. Co., U.S.A., 0.70 percent, and New United Motor Mfg. Co., 0.61 percent.

Nissan added a second shift at its Smyrna (Tenn.) plant on June 3.

Ford's Dearborn plant is still not being supplied with acceptable parts for the Capri. Production was again halted during the week ended June 1, and it is unlikely that the 452 units scheduled last week were built.

General Motors scheduled two overtime shifts Saturday (June 8) at the following plants: Detroit; Arlington, Tex.; Fairfax, Kans.; Lakewood, Ga.; Wilmington, Del.; Janesville, Wis.; Lordstown, O., and Pontiac G.

Chrysler planned two overtime shifts Saturday at its Jefferson (Detroit) and St. Louis plants (Nos. 1 and 2).

The Jefferson plant is slated to work two 8½-hour daily shifts this week (June 10).

Chrysler's plants in Belvidere, Ill., and St. Louis are scheduled to operate two nine-hour daily shifts this week.

All Ford plants but Chicago are scheduled to work daily overtime this week.

Second shift begins work at Nissan Tennessee plant

SMYRNA, Tenn.—A second production shift began last Monday (June 3) at Nissan Motor Mfg. Corp. U.S.A., bringing employment at the Tennessee facility to 3,000.

The company announced plans a year ago to start two-shift operation in June, 1985, and to move to full production capacity of 240,000 cars and trucks annually by the spring of 1987. Light truck production began at Nissan in June, 1983. Production of the Sentra was added in March, 1985.

Marvin T. Runyon, Nissan Motor Mfg. president, said that more than 50,000 applications were received for the 700 night-shift jobs.

The majority of night-shift employes have been working at Nissan since February, receiving extensive training during the day-shift operation. The training included classroom instruction, training on off-line vehicles and actual experience on the assembly line.

"Since the first of May, the shifts have been gradually separated to give night-shift employes experience working on their own for longer periods of time," Runyon said.

Plans call for night-shift employes to work from 9:45 p.m. to 6:30 a.m.

"The hours are unusual for the automotive industry," said Jerry Benefield, manufacturing vice president, "but our people told us they'd prefer to start work at 9:45 because it allows them to have dinner with their families before coming to work and to be back home early in the morning."

Truck makers post best month in six years

May domestic truck production of 322,892 units was the highest monthly output in six years.

May's build was 7.60 better better than April's 300,092, 10.93 percent more than the year-ago month's 291,068 and the best output of any month since May, 1979, when 338,961 trucks were assembled.

Scheduled production of 78,273 trucks last week was again higher than for any week since the week ended May 19, 1979, when 81,851 units were built.

Contributing to the increased output was the second shift added at Nissan Motor Mfg. Co. U.S.A.'s Smyrna (Tenn.) plant on June 3.

Last week's targeted build was 27.16 percent more than the previous week's 61,555 (a holiday week) and 17.32 percent better than the year-ago week's 66,716.

So far this year, 1,562,936 trucks have been assembled, 9.66 percent more than the 1,425,266 completed last year at this time.

General Motors scheduled two overtime shifts Saturday (June 8) at the following plants: Janesville, Wis.; Lordstown, O.; Flint (Nos. 1 and 2); Baltimore, and Pontiac.

Chrysler Corp.'s Warren plant was scheduled to operate two overtime shifts Saturday.

Two nine-hour daily shifts are also scheduled for the Warren plant this week (June 10).

All Ford Motor Co. plants but St. Louis are scheduled to work daily overtime this week.

Overtime is scheduled Saturday (June 15) at Ford's Norfolk plant.

May production a record for Canadian trucks

Canadian truck makers' May production of 79,916 units was the highest output of any month ever. It topped the former record of 79,441 built in March, 1984.

The May total exceeded April's 77,589 by 3 percent.

Truck manufacturers scheduled assembly of 18,915 units last week, 8.75 percent more than the previous week's 17,393 and 5.00 percent better than the year-ago week's 18,015.

Year-to-date, 406,970 trucks have been built, 6.82 percent more than the 380,984 assembled last year at this point.

Scheduling 26,608 units last week, Canadian auto makers again targeted the highest weekly production in two years.

Last week's estimated output was 3.62 percent more than the previous week's 25,678 which was the best actual weekly build since the week ended May 14, 1983, when 27,994 cars were built.

So far this year, 472,833 cars have been built, 8.79 percent fewer than the 518,375 assembled last year at this point.

Total car production for May—107,207 units—was up 12.18 percent from April's 95,563.

Last month's was the highest monthly output this year and was right up with the year-ago month's 107,995 (a 0.73 percent dip). The 1984 total was the highest for May since 1977, when 117,134 cars were built.

Taxi!

Hidden Image

Replacement for famed London vehicle

The London Taxi is due to be replaced next year. The chassis of the new CR 6 prototype comes from Rover, but the car is higher and wider than the Range Rover and will have rear drive instead of four-wheel drive. The taxi will be equipped with a diesel engine supplied by Rover, but the car itself will be made by Carbodies in Coventry, England, which built the old London Taxi. A firm in Mt. Clemens, Mich., is building the old taxi, but has no immediate plans to build the new model.

Boom may turn to doom, auto researchers warn

By Kathleen Hamilton
Assistant Managing Editor

The U.S. auto industry is facing a shakeup within the next four years in which suppliers to the Big Three could easily lose half their business, auto-related employment will fall, old-line auto and supplier firms will be forced to cut wages and profits of the auto makers could be damaged so severely by imports' sales gains that future products could be jeopardized.

Those grim warnings come from researchers at the Industrial Technology Institute, a nonprofit think tank in the Detroit suburb of Ann Arbor. In a new report, they urge suppliers to aggressively pursue business from the Japanese car makers that are setting up shop in the U.S.

They hold out little hope for any governmental solution to the domestic industry's market losses to the Japanese.

Their warnings sound incongruous amid the current profit reports from U.S. auto makers and supplier companies which, as researchers Michael S. Flynn and Daniel Luria pointed out, have made greater productivity strides than the OEMs.

But there is plenty of evidence that ITI's grim forecast may be right. For one thing, its sales forecasts closely resemble those recently projected by the U.S. Department of Commerce Office of Auto Industry Affairs (Automotive News, May 27). The figures were arrived at independently.

• The ITI researchers differ with the government, however, on one significant point: Japanese makers will become dangerous competitors in the midsize-car segment, taking profitable sales away from domestic makers, Flynn and Luria predicted. The Commerce Department report suggested the Japanese would remain strong only in the small-car segment.

Flynn and Luria took their calculations several steps beyond the Commerce Department report to show the likelihood of devastating losses for supplier firms.

Suppliers will be hit by the Big Three's market-share losses. But suppliers also will suffer losses of perhaps 10 percent of their sales to foreign sourcing of components, they said.

Furthermore, the Japanese supplier companies now moving to the U.S. are likely to challenge traditional U.S. suppliers for their Big Four and aftermarket business, Flynn and Luria predicted. They have the capacity to supply more than Honda, Nissan or Mazda, they said.

Those new suppliers will frequently win bidding wars because they will have efficient plants, workers with low seniority and therefore low wages, no pensioners to pay and, most likely, more favorable union contracts, they said. They also will enjoy tax incentives from local governments.

Flynn pointed to the group of suppliers that five years ago looked at where the market was headed. "There were suppliers who responded more quickly to downsizing five years ago . . ."

". . .And, boy, are they going to pay" for what appeared to be a wise response, said Luria. Their segment—small cars—will be hit

Shop upturn is greatest in 14 months

By Jack Walsh
Service Editor

The rate of growth in franchised dealers' service and parts operations in April was the highest in 14 months, with impressive increases in volume in all shop areas.

During the month, according to the Automotive News Service Index, service/parts business was 18.6 percent greater than volume in April, 1984. Four-month results were 9.9 percent higher than the year-earlier figures.

The leading indicator in April was total customer-paid and warranty sales, which showed a gain of 23.5 percent over last year. The number of repair orders written during the month, both customer-paid and warranty, was 21.4 percent higher than a year ago.

There was an increase of 20.6 percent over last year in sales of shop parts, those used in customer-paid and warranty repairs. Gross profit on all labor, parts and accessory sales—the most important indicator to dealers—was up 18.2 percent in April over the

Drops fight against 2-tier pricing; preemption accepted

NADA board OK's subsidy guides

By John A. Russell
New York Staff Writer

NEW YORK.—NADA last week effectively abandoned the fight against two-tier pricing in its quest for passage of federal legislation on fleet subsidies.

The dealer association's board of directors authorized a "platform for negotiations" with U.S. lawmakers eliminating that key issue.

By a vote of 49 to 3, the NADA board approved the guidelines under which its Government Relations Committee will negotiate with congressional leaders. NADA also will accept the key "preemption clause" that prohibits states from enacting laws on fleet subsidies. (Automotive News, June 10.)

When news of the vote reached other dealer leaders in this fight, the reaction was swift and harsh against the board's action. Some termed the vote a "sellout" while others called any move to eliminate the pricing issue a "smokescreen." One dealer association threatened to resign from the national body.

The resolution did not mention two-tier pricing—which enables large fleet buyers to obtain cars at lower costs than dealers. Asked whether the dealer association had abandoned this point as a goal in federal legislation, Frank McCarthy, NADA executive vice president, said, "Yes."

While the platform for negotiations does address many dealer problems concerning fleet subsidies, two-tier pricing has been

50-day inventory as June opens

U.S. car supply lowest in a year

By Kathleen Hamilton
Assistant Managing Editor

The stockpile of new domestic cars is continuing on its six-month slide, roughing up the model mix along the way. The June 1 inventory of cars stood at 1,546,188, an ideal 50-day supply.

The days-supply level has been slipping for six months and on June 1 reached its lowest level since June 1, 1984, when it was 47. Last month, it was 52.

The latest unit count was a five-month low. On May 1, there were 1,615,026 cars in inventory. On June 1, 1984, the stockpile stood at 1,467,214.

Month-to-month changes appeared eratic, but were almost universally the result of auto makers' low-interest-rate incentives. The incentive programs were carefully targeted during May, and they obviously worked well. There were very few lines overstocked on June 1.

The subcompact segment's inventories were trimmed by healthy sales gains, led by Escort-Lynx sales rates nearly double those of a month earlier. The one-two punch of incentives and new models helped there.

Chrysler Corp.'s subcompacts were cannibalized both by the Fords and by the fact that Chrysler dropped incentives on its subcompacts last month. But because of those sales losses, the Chrysler small cars stood at a healthy level on June 1. One month earlier, they were in short supply.

American Motors' subcompacts climbed to an uncomfortable 111 days' worth, but that was solely because of production gains; sales rates for Alliance and Encore actually rose, just not as much as output.

Increased sales of subcompacts may be the reason sales declined considerably in the compact segment. Or perhaps the sales drop and resulting days-supply increase was due more to General Motors dropping incentives on some of its J-cars and Pontiac Fiero and Ford Motor Co. lifting its incentives on Tempo and Topaz.

The two J-cars that were covered by incentives—Chevrolet Cavalier and Pontiac Sunbird—were in short supply. They were the only compacts covered by any programs last month.

The month-to-month change in the days-supply level for intermediates was due not to sales—which stayed steady—but to a slight production decline. Chrysler reaped giant improvements in sales and

Chevy Nova bows

The Chevrolet Nova, offspring of the General Motors-Toyota joint venture, went on sale in 25 Midwest states last week. The front-wheel-drive, four-door nothchback is powered by a 1.6-liter L-4 engine. It will be sold nationwide beginning in the fall.

AMC offers free gas to Renault buyers

By Edward Lapham
Marketing Editor

American Motors has launched a "10,000 Miles of Gas on Us" incentive which will rebate up to $595 to retail buyers of 1984 and 1985 Renault models.

The program requires a $100 participation by dealers and runs from June 16 through July 31.

Essentially, the program is a dust-off of 1970s-style gas crisis rebate programs, with a little different twist.

Under the program, Renault buyers will receive a check from AMC equivalent to the cost of enough gasoline to drive 10,000 miles.

The rebate computation formula uses EPA combined city/highway mileage estimates for each model to determine how much gas will be needed. AMC uses an estimated price of $1.25 per gallon of unleaded regular gasoline to figure the rebate amount.

Since average fuel costs for 15,000 miles of operation are already included on the price sticker, computing individual rebates is a simple matter of taking two-thirds of the posted fuel cost estimate.

The rebates range from $338 on the most-fuel-efficient Alliance and Encore models equipped with the 1.4-liter engine and 4-speed manual transmission to $595 on the Fuego with 2.2-liter engine and automatic transmission.

Peter G. Guptill, AMC sales vice president, said he expects the program to be successful.

"Our consumer research studies indicate that the '10,000 Miles of Gas' will have great appeal during the heavy-driving summer vacation period," Guptill said.

Ad support began Sunday with national television advertising on evening NBC and ABC news shows.

An AMC spokesman said car buyers will likely receive their rebate checks within four to six weeks after they file an application.

"We expect to be deluged," he said.

Early-June car sales climb to 7-year peak

By Jenny L. King
Detroit Reporter

New-car sales stayed aloft in the first 10 days of June without the aid of artificial drafts from the lower-interest-rate loans offered buyers by most domestic makers in May.

In fact, June 1-10 sales reached their highest level for the period since 1978.

With five of the seven domestic makers reporting sales increases from their 1984 figures, the total for early June reached 216,565, up 15.96 percent from 186,762 a year earlier.

Only one other time in the past seven years has the total broken through the 200,000 barrier and that was 210,188 in 1983. The recent accomplishment was the best June 1-10 since 1978 when 283,274 new domestic cars were delivered.

General Motors and Volkswagen entered the winners' circle after several absences. GM sales were up 16.71 percent, to 129,594 from 111,037. VW reported an 18.65-percent gain, climbing to 986 from 831.

Chrysler Corp. was up 20.73 percent, to 28,184 from 23,345. Ford Motor Co. sales of 52,846 were up 14.34 percent from 46,218 the preceding year.

Packages replace laundry list

Only 8 'options' for Chevy Nova

By Edward Lapham
Marketing Editor

The Chevrolet Nova is a marketing precursor as well as being the first product of the General Motors-Toyota joint venture.

Instead of the usual laundry list of options and option combinations, Nova is available in just eight option-package configurations, including the base package. Four packages are standard trim level and four are the Custom CL level.

Thomas A. Staudt, Chevrolet general marketing manager, said the division will "experiment" with this option ordering procedure on other 1986 car lines this fall.

"There won't be a revolution or anything this fall," Staudt said, "But we are going to try it in a few experiments."

Starting package-option marketing on the Nova was a natural because it is more like the way imports market options and less like the traditional domestic procedure. And Nova's target market buyers are import shoppers.

Staudt said he would like to see the procedure spread because it saves time and money and simplifies the ordering procedure.

"Every time you make car buyers make a decision, you put another roadblock in the purchase process," Staudt said.

"If we were smart, we would just tell the dealers what they were going to get and ship them the cars."

Even the base Nova package is dressy by domestic standards, with AM radio, all-weather tires and body side moldings.

The top of the line option package includes electronic AM/FM/stereo radio and cassette player with Seek and Scan, plus automatic transmission, power steering, air conditioning, power door locks, electronic speed control, intermittent wipers, remote left-side mirror, electric rear window defogger, halogen headlamps and the CL trim appointments.

Production planning built a number of full-dressed models for the launch, but the average Nova price for the run was $8,821, including the $290 destination charge. That is toward the high end of the spread between the base price of $7,195 and the top-end price of $9,815.

Although the average price of the Nova is toward the high end of the range and indicates a good concentration of upper-line packages, Staudt does not believe the Nova launch will suffer the same fate as the Cavalier launch in 1981.

The J-cars, also slotted to compete head-to-head with imports, were loaded "because that's the way import buyers like them."

As a result, they were also very pricey and met market resistance.

Chevrolet was forced to go to a much leaner production mix in order to compete.

Staudt said he believes the slow Cavalier launch was the result of a number of factors, not just the oft-cited option-mix snafu.

He said an underpowered engine, cold-start difficulties and availability problems all contributed to the sluggish J-car launch.

Staudt also said that seemingly high days-supply numbers for the Isuzu-built Spectrum and Suzuki-built Sprint do not indicate a soft launch for those models.

Spectrum had an 85-day supply on June 1 compared with 103 days on May 1 and 91 days on April 1.

Sprint had a 66-day supply on June 1, compared with 41 days on May 1 and 42 days on April 1.

Staudt said there has been "insufficient ad support" for the two new imported small cars and that they are just now "gaining strength from owner testimonials."

He also said that they are still "available only in limited numbers" which means that dealers are not delivering the units they have in inventory because they want to keep them on the showroom floor.

"As soon as availability increases, there will be more turns on inventory and the days-supply numbers will go down," Staudt said.

'Hybrid' Nova on sale in 25 Midwest states

By Edward Lapham
Marketing Editor

The 1985 Chevrolet Nova, the first native offspring of the General Motors-Toyota liaison, officially went on sale in 25 Midwest states last Thursday.

Due to an unexpected early boost in production rates at New United Motor Mfg., Inc., 7,000 cars were in dealer inventory by the June 13 intro date.

However, after the initial stock is depleted, "there will be a wait for cars," according to Chevrolet officials.

The only current body style is a four-door sedan with 1.6-liter L-4 engine, although Chevrolet officials promised "pretty exciting derivatives" in the future.

A five-door hatchback is scheduled to go into production in late August.

The subcompact four-door sedan has a wheelbase of 97.5 inches. Overall length is 166.3 inches and curb weight is 2,162 pounds.

The initial sales goal is for more than 100,000 units annually after full production rates are achieved.

Thomas A. Staudt, Chevrolet general marketing manager, said he believes most of the Nova sales will be conquests.

The Nova ad tagline, "The Best of Both Worlds," sums up Chevrolet's approach to marketing the cars.

Nova, built on a modified Toyota Corolla platform with all-new sheet metal, is designed to compete with imported makes and is targeted at a market segment with high import purchase predisposition.

At at national press preview in Detroit, Chevrolet General Manager Robert D. Burger described the target market buyers. He said median age will be about 34 and

Chrysler plans truck venture with Mexican firm

DETROIT.—Chrysler Corp. plans a joint venture with Mexico's Grupo Industrial Ramirez to build medium-duty trucks in Monterrey, Mexico, beginning in the 1986 model year.

The agreement, as yet unapproved by the Mexican Government, would allow the transfer of Ramcharger production to Chrysler's Mexico City plant, which currently builds medium-duty trucks.

The Ramcharger has been produced in Chrysler's plant in Warren, Mich. Warren is being converted to build Chrysler's 1986½ N-truck.

If approved, Chrysler said the joint venture will produce trucks for Mexico and for export to other markets in South America and Asia. At present, Chrysler does not sell medium-duty trucks in the U.S. or Canada.

Chrysler to expand factory for P-cars

STERLING HEIGHTS, Mich.—Chrysler Corp. this month will start expanding its assembly plant here to allow the additional production of the new 1986 Plymouth Sundance and Dodge Shadow sporty compacts (P-cars) starting next May.

The plant was acquired from Volkswagen of America in April, 1983. It turns out Chrysler LeBaron GTS and Dodge Lancer. It held a ceremonial roll-off of its 100,000th car, a silver, turbocharged LeBaron GTS four-door last week.

Chrysler calls it one of the world's most-advanced assembly plants. It went on stream last September. A second shift started in February. The facility employs about 4,300.

The expansion will cost about $160 million in structure, machinery and equipment and cover 256,200 square feet.

"A major goal of the project is to provide the plant with full capability in all systems to build either the Sundance and Shadow or its present products, LeBaron GTS and Lancer," said Richard E. Dauch, executive vice president for manufacturing.

"Producing these sporty compacts along with the popular Lancer and LeBaron GTS sedans gives Sterling Heights Assembly the flexibility to adjust to swings in the market. We expect the greater variety to increase total sales of the passenger cars built there," Dauch said.

LeBaron GTS and Lancer are selling well. As of June 1, the inventory of LeBaron GTS stood at 50 days, down from 114 days a month earlier. Stocks of Lancer amounted to a 70-day supply compared with 81 days a month before.

The expansion will be in the form of four building additions, the largest of which will be 143,400 square feet. Dauch said that structure will allow completion of all major subassemblies at Sterling Heights.

"The new facilities will include the industry's most advanced technology," he said. "Our automated operations in welding, painting, trim and material handling will add 118 new robots, bringing the total used in the plant to 220."

Problems mount for 3-wheel Zoe; parent firm sued

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—ZoeTrans, an Orange County-based firm attempting to sign dealers for a three-wheel car it seeks to import from England, is facing mounting criticism from those formerly associated with the project, along with two lawsuits, one from an ex-dealer and the other from Zoe's former ad agency.

In addition, the company has yet to certify the Reliant three-wheeler, and ZoeTrans' parent, Zoe Products, Inc., was recently found guilty of stock fraud in a civil suit brought against it by the SEC. A number of people who either consulted or signed agreements with the firm also have asked Zoe to stop using their names in Zoe's dealer recruitment drive.

Headed by James P. McPherson Sr., Zoe Products has been called by some observers a company in search of a product. Zoe has dealt in a number of items ranging from vitamins and sobering aids to medical equipment. Its most recent project, through the ZoeTrans subsidiary, is an attempt to crack the entry-level auto market with a three-wheeler.

The company's first entry was the Zoe Zipper, a Japanese-produced vehicle, and later, having abandoned that deal, it shifted focus to the European-produced Reliant and Ligier vehicles. Zoe Products is a stock company listed by NASDAQ and traded over-the-counter. A so-called "penny stock," it currently trades between one-thirty-second to three-thirty-seconds of a dollar.

It was the business practices of Zoe Products in the vitamin business that attracted SEC scrutiny. On May 20, Judge James M. Ideman granted a summary judgment in the SEC's favor against Zoe on charges that the company committed stock fraud. In unusually strong language, Ideman was quoted in the Los Angeles Times as saying to Zoe's attorney, Robert Bretz, "It appears to me your clients are frauds."

According to the SEC complaint, Zoe misled investors by stating in a number of press releases that its vitamins were sold by major drug and food store chains when, in fact, the product had not. Zoe's attorney argued unsuccessfully that Zoe's product had been "cleared" by the chains and that the wording in the release was from the financial public relations firm that prepared it.

The judge's ruling enjoins Zoe from filing false and misleading information in the future and, according to an SEC spokesperson, the ruling applies to all of Zoe's dealing, including the car activities. The spokesperson declined to comment on whether the SEC was looking into these other areas.

McPherson said the SEC suit has no bearing on ZoeTrans, since the subsidiary is only partly owned by Zoe Products, Inc. Said McPherson, "That thing was a civil suit. The whole thing has no fine or no penalty. It's a four-

Please turn to Page 51, Col. 1

They're all Scorpios

Ford's new Scorpio/Granada went on sale in Europe May 17. Hertz placed a $6-million order for 500 units and PanAm named a Boeing 747 the Clipper Scorpio Jumbo after it. Hertz operates a European fleet of 70,000 vehicles, of which more than 20,000 are supplied by Ford.

Frustrated dealer warns Zoe prospects

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—The ad appearing on Page 60 in the June 3 issue of Automotive News read simply: "Considering a Zoe franchise in the 3-wheeled market? Take advantage of our experience. For your sake, talk to someone who has been there."

The ad carried a Pennsylvania phone number with "Mr. Preston" as the contact. Mr. Preston turns out to be William Preston Baldwin Jr., owner of Baldwin Buick, Schillington, Pa.

Baldwin is suing Zoe for money he says is owed to him. "I've kind of had mixed emotions about runnng the ad," Baldwin said. But he said he went forward with it to let other dealers know what his experiences with Zoe have been.

"We haven't been able to do anything positive" with Zoe, Baldwin said. The ad has drawn "a variety of calls from across the country," Baldwin said, adding that he's taken almost a dozen calls, ranging from prospective dealers to people considering jobs with Zoe.

Baldwin said he recounts only what his experience with the company has been since becoming a dealer in August, 1983, and terminating a year later.

The first products sent to him by Zoe were three-wheeled scooters.

"They were $850 apiece," Baldwin recalled. "They said they could sell for $1,300. We didn't want the scooters. We held them for a year and finally sold them at a loss for $550."

The next products sent to Baldwin from Zoe were two "Little Giant" off-road trucks. Baldwin said he paid $5,200 each for the vehicles, but when he attended a Zoe dealer meeting last summer, he found out from the other dealers that they paid only $4,000 for them.

Baldwin said he was promised that the company would refund the difference, but "we never got five cents back."

He said only six to eight dealers attended the meeting.

Later, Baldwin received two Zoe Zippers. "They said the cars would be $2,800," he said. "We ended up paying $3,400 each."

The Japanese-produced vehicles arrived at Baldwin's dealership damaged. He returned them and hasn't received his money back from the company.

Baldwin said he terminated his dealer agreement last August. Although his suit is pending, Baldwin said he placed the ad when he learned that other dealers were sending $17,000 to Zoe for parts packages as part of becoming dealers.

"We put up no money; we're probably out about $18,000 to $20,000," Baldwin said, adding that he's concerned about other dealers putting in the money up front without getting another view of some of the company's past dealings.

More car-like than current Aerostar

Ford confirms front-drive minivan

By Dan McCosh
Detroit Reporter

Ford Motor Co. is working on a front-drive minivan to compete in the next-generation minivan race, said Lincoln-Mercury General Manager Thomas J. Wagner, confirming an earlier report in Automotive News that Ford is developing a car-like vehicle separate from the new rear-drive Aerostar.

Wagner, in a broad-ranging discussion of Lincoln-Mercury's marketing plans before the Detroit Auto Writers Group, said the "All-Purpose Vehicle" (APV) "isn't in the cycle plan now," but is in the development stage for both Ford Division and L-M.

It would be a "high-cube" vehicle, more car-like than the current Aerostar. "It's not in the near future," Wagner said.

Other sources close to the program say Ford is holding discussions with its Japanese affiliate, Mazda Motor Corp., for both design and manufacture of the front-drive minivan.

General Motors also has a front-drive minivan in development, so far slated for Pontiac. Chrysler Corp. is working on a 1988 "Z-van," narrower than the current minivan and incorporating some advanced materials technology.

In its quest for divisional identity, L-M also needs a "sexy European" car to replace the LN7, Mercury's version of the Ford EXP which Ford Division is expected to revive in the 1986 model year.

Mercury isn't interested in sharing the new EXP, Wagner said, but he would like to see a new sporty car in the $7,500 class "maybe from Europe"—a hint that such a program would be the third car added to the Merkur franchise, which now consists of the Merkur XR4Ti and will add the Scorpio next year.

Wagner also confirmed the name and launch of the $20,000-$25,000 Scorpio, being built by Ford in Cologne, West Germany. The Scorpio is due to go on sale in the U.S. in the fall of 1986, Wagner said.

Other anticipated product changes include a new front-drive Continental "within a few years" and minor sheet-metal changes for the Lincoln Town Car, which will continue at least through the end of the decade, according to Wagner.

Noisy, lit-up car tells you where it is

NEW YORK.—The Hammacher Schlemmer catalog offers an electronic car locator which helps people find their cars in crowded parking lots by turning on the car lights and horn from as far as two blocks away.

A key-chain-sized transmitter sends a coded signal to a receiver unit placed beneath the dashboard which activates the lights and horn for one second.

Fewer factory promotions for Detroit event

Industry's Grand Prix fever wanes

By Edward Lapham
Marketing Editor

The old Detroit adage "Race on Sunday, Sell on Monday" apparently has lost some of its luster, as factory support for sales-promotional activities related to the 1985 Detroit Grand Prix race has waned.

The Grand Prix will be held June 21-23.

While there are still a number of promotions and tie-ins, the attitude toward Grand Prix IV has cooled.

Most divisions and companies, including suppliers, will participate through support of social and cultural events during Grand Prix week.

However most of the sales, marketing and merchandising tie-ins of earlier years are gone.

"What do you get out of it when there aren't American cars running around out there?" one industry source asked rhetorically.

An official at another company was equally cool. "We found that there was just a lack of return on investment," he said.

The auto maker that is most involved in promotional tie-ins is Ford, which has supported the race from the beginning.

Ford, with international operations and a history of supporting and participating in international motorsports events, obviously gets a return on its investments.

Lincoln-Mercury, which picked up sponsorship of the Trans-Am support race when Pontiac bowed out, also has "a fair amount" of Merkur signage on the track and will use racer/spokesperson Lyn St. James and Miss Teenage America in seat-belt safety promotional activities throughout the area this week.

In conjunction with the Trans-Am event, the Mercury Motor City 100 Championship race, L-M's Detroit district will have a one-lap driveaway of 100 Capris on Saturday.

Ford Division's Detroit district also will have a one-lap driveaway of 35 Thunderbird Turbo Coupes.

AMC's promotional activities are limited to sponsorship of the Lucas Challenge SCCA Sports Renault Race.

There will be just three support races again this year, which has limited the opportunity for sponsorship for those manufacturers with any residual interest.

In addition to the L-M- and Renault-backed events, there is also a Bosch-Volkswagen Super Vee Championship race.

Gone is the Chrysler Cup/Champion Spark Plug series race for front-drive cars.

In fact, the only direct promotional activity by Chrysler Corp. this year is the erection of three scoring towers by Dodge.

The towers will be strategically placed to be visible to both racegoers and the worldwide television audience.

The Detroit Grand Prix will be telecast by CBS for the second consecutive year and the industry has maintained its network advertising.

The total pop on the 2½-hour show this year by auto and auto related companies is more than $1 million, compared with about $900,000 last year.

However, the 30-second spot price was increased to about $40,000, from $36,000 last year.

The biggest advertiser is Goodyear with four spots.

Among the auto-related advertisers with two spots are GMAC, Ford, Chrysler, AC-Delco, Fram, Mobil Oil, Chevrolet, Volkswagen, Dodge and Lincoln-Mercury.

Quaker State Oil and Honda have one spot each.

Cabriolet, Scirocco, Vanagon get special treatment

VW offers 3 Wolfsburg Editions

By John A.Russell
New York Staff Writer

NEW YORK.—Volkswagen introduced three of its limited Wolfsburg Edition models last week, marking the third year the company has decided to present special mid-year models.

This year, the Scirocco, the Cabriolet and the Vanagon camper have been selected for special treatment and special prices, according to Volkswagen executives.

More good news for Volkswagen Division was announced by General Sales Manager Jim Wolter who said Jetta sales for May showed a jump of 108 percent over last year. VW Division's overall sales for the month were about 24,000 units, up about 11 percent from May, 1984.

The Wolfsburg Edition Cabriolet has full leather interior, power rack and pinion steering and new 6x14-inch light alloy wheels. The model will come in silver or red and is priced at $12,980. A VWoA spokesman said this is not a great increase over the 1982 price of $10,600 since the latest version has the GTi engine, power steering and the new wheels.

The Scirocco has the light alloy wheels with aerodynamically designed "teardrop" brake cooling slots, body color bumpers and mirror housing and a "blackout" taillight treatment.

It is available in red, white and black and will be priced at $10,980. The 1982 price on this model was $10,150.

On the Wolfsburg Edition of the camper, VWoA dropped the "kitchen sink" and added more seating capacity.

The Vanagon GL does have the sink, but it was found that a lot of customers didn't need that standard feature. The storage space was increased because of the removal of the sink and this edition will be priced at $14,700. In 1982, this camper was priced at $15,000 and, currently, the GL Vanagon with the sink goes for $17,190.

This model has metallic paint, captain's chairs and a removable ice chest. It sleeps four and seats six.

Wolter stressed that there would be limited availability of these models. Only 1,500 campers, 3,500 Cabriolets and 3,000 Sciroccos will be built.

As for the general business, Wolter said VW Division is experiencing a turnaround in several areas. Three years ago, 60 percent of its business was done in U.S.-built models. Today, the mix is 60 percent import and 40 percent domestic, which is what the division was gearing for and why it put the big push behind its Jetta line for 1985.

While Wolter noted that there were some problems with the introduction of the new Golf and the Jetta for 1985, he said they were more in terms of supply than anything else.

"We're back on the right track."

Some auto tax credits unfair, high court says

WASHINGTON.—The Supreme Court has ruled that states which grant car buyers credit against their use taxes for sales taxes paid to reciprocating states may be violating the equal protection rights of non-residents.

Sixteen states now allow new residents a credit for auto sales taxes paid in another state. They are Alabama, Georgia, Kentucky, Louisiana, Massachusetts, Michigan, Mississippi, Nebraska, New Jersey, New York, North Carolina, North Dakota, Pennsylvania, South Dakota, Texas and Vermont.

The court's decision stemmed from a challenge to the Vermont law brought by a former Illinois resident who had purchased a car in Illinois, paid state sales tax on it there and then moved to Vermont.

Vermont imposes a state sales tax of 4 percent on a car if it is bought in Vermont by a Vermont resident and a 4 percent use tax upon registering a car unless the Vermont state tax was paid.

Vermont residents who buy a car out of state receive a credit against the use tax if they paid state tax in a state that has reciprocity with Vermont. Non-residents receive no such credit.

Norman Williams, a newcomer to the state from Illinois, thought that unfair and sued. The Vermont Supreme Court ruled against him, however, holding that the state was only asking him to pay his fair share of highway maintenance, the 4 percent it asks of its own residents.

In overturning that decision by a 5-2 vote, the Supreme Court held that "residence at the time of purchase is a wholly arbitrary basis on which to distinguish among present Vermont registrants—at least those who used their cars elsewhere before coming to Vermont."

The impact of the Supreme Court ruling is unclear, however, because Williams' suit was dismissed by the state court before an answer was filed and because the Supreme Court proffered no remedy. It ruled only that the case be remanded for further proceedings.

Fiat lights its Fire

A new engine in a showcase of a plant

By Richard Feast
European Editor

Termoli, Fiat Auto's showpiece engine plant on the Adriatic coast, is a good example of why rivals such as Ford of Europe are taking such a keen interest in the Italian group. When the plant is fully on stream, it will be able to produce a new engine every 20 seconds with a work force of 1,000.

And that isn't just any engine, but an all-new design that is far simpler, lighter and more economical than the one it replaces. Known as the Fire 1000, it will form the basis of Fiat's small-car powerplants into the next century.

Fiat committed itself to the project when its fortunes were at a very low ebb in the early 1980s. The Fire engine already is being produced for the little Lancia Y10 unveiled at the Geneva auto show in March, as well as some versions of the Fiat Uno.

Peugeot (PSA), the company with which Fiat began the Fire project, so far has not announced when and where its version will go into production. The original idea was to design and develop the engine together, and produce a million a year for use by both groups.

However, political considerations demanded a production split in order to maintain employment in national industries that were fast cutting back on manning levels. While PSA hesitated, due to a shortage of cash and continuing losses, Fiat pressed on.

The result is a highly vertical structure. Fiat construction companies built what is known as Termoli 3 on a site that already was producing engines for Panda, Ritmo and Regata models. Plant technology came from Comau, another Fiat company. Cast-iron components (cylinder blocks, crankshafts, connecting rods) and aluminum parts (cylinder heads, intake manifolds) are from Fiat's Teksid Div. Other Fiat firms, such as Weber, Magnetti-Marelli, Whitehead and Savara, supply engine ancillaries.

Machining, assembly and testing are very automated. The dedicated factory has 56 robots and 92 handling machines coordinated by 103 computers. When production started in January, the first 1,000 workers were removed from layoff. Opening the plant solved an over-manning problem at Termoli, which employs a total of 2,500. Of those employed at Termoli 3, only 650 are direct labor; the other 350 are indirect, doing such things as window cleaning, gardening and maintenance.

Automated and awesome: The engine testing room for Fire 1000s.

Production now is running about 800 engines a day, but by the end of this year will be 2,100. When in full production in mid-1987, the rate will hit 2,600, or one every 20 seconds. Personnel director Dr. Paolo Gasca says the plant was designed to operate profitably when running at only 70 percent of capacity.

The 1-liter Fire engine is used in some versions of the Lancia Y10 and Fiat Uno, and by the end of this year a 750-cc version will appear for use in the Panda. Later, toward the end of 1986 or early in 1987, a 1.3-liter version will be unveiled for use in the next-generation Ritmo/Strada.

In early planning, Fiat and Peugeot identified a need for both three and four-cylinder versions of the Fire. So far only Fiat's four has appeared. Peugeot, which was design-leader on the three-cylinder, still has not given a go-ahead on it, a delay that has forced Fiat to develop the 750-cc four as a fallback move.

Between them, Fiat and Peugeot groups invested some $17 million in design and development of the Fire. The Termoli 3 plant cost Fiat about $335 million.

First versions of the Fire indicate the advances made in engine design in recent years. On paper it is a four-cylinder, four-stroke, reciprocating gasoline-engine, like the one it replaces. But it only takes 107.5 minutes to assemble compared to 231.5 minutes for the old powerplant.

In response to Japanese Government's request

Nissan, Toyota to boost imports

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Nissan Motor Co. will establish an Import Promotion Committee within the company in an effort to obtain more parts from abroad in response to the government's request that Japanese industries increase imports.

Nissan plans to expand imports of automotive parts and equipment from 62.5 billion yen ($243.3 million at current rates) in fiscal 1984 to 68 billion yen ($264.7 million) for the current fiscal year ending in March, 1986.

Nissan also will spend 3.7 billion yen ($14.4 million) to acquire a super computer from the U.S. and for other goods for promotional use.

Toyota Motor Corp., which already has established an Import Expansion Committee, will boost its imports of parts and other automotive equipment in fiscal 1985 from the originally planned 52 billion yen ($202.4 million), which amounted to a 5-billion yen ($19.5 million) increase over the previous year's imports.

Mitsubishi Motors Corp., Honda Motor Co. and Mazda Motor Corp. also are expected to establish import promotion committees.

Nissan also reported an unconsolidated net income of 74.28 billion yen ($289.1 million) for the year ended March 31, up 5.3 percent from the year earlier.

Nissan sales for the fiscal year totaled 3.62 trillion yen ($14.1 billion), up 4.6 percent from the previous year.

Nissan also reported its unconsolidated ordinary profit before taxes and extraordinary items totaled 148.2 billion yen ($576.8 million), up 22.6 percent. The firm attributed the increase to its U.S. operations, cost-cutting efforts and decreased depreciation expenses.

However, Nissan reported production and sales volumes both dipped during the year. Output slipped 1.8 percent to 2.47 million units, while sales declined 1.4 percent to 2.46 million units.

The dual declines were attributed to slow personal spending in the Japanese market, where car sales droped 5.5 percent to 841,830 units. Nissan's car exports advanced 1.0 percent to 984,152 units.

Nissan's commercial vehicle sales in Japan rose 9.5 percent to 247,077 units, while exports declined 4.4 percent to 390,923.

Nissan said its production in other countries increased dramatically—51 percent—to 262,271 units. Nissan said most of that increase was accounted for by the startup of car output in the U.S. in March.

Nissan said it expects profits to climb to 160 billion yen ($622.7 million) in the fiscal year ending next March on sales of 3.85 trillion yen ($15.0 billion).

Toll-free call will get Renault Alpine information

SOUTHFIELD, Mich.—Consumers who want to know more about the Renault Alpine V-6 Turbo, which is being launched in Europe this year and will debut in this country in the fall of 1986, can call a toll-free number.

The Renault Alpine V-6 Turbo Information Center toll-free number is 800-227-1227. Within Michigan it is 313-354-8813. Callers will receive an information package on the new, limited-production sports car.

Rowand report

Continued from Page 24

moved from making one-offs in his garage to higher volume, he abruptly faced the same facts of business life the big guys had been meeting right along. Those factors range from low-cost offshore competitors to labor problems. They can be formidable.

In the immediate future, the robot industry is going to see more emphasis on flexibility and the robot's role in flexible machining. Robots will become much more than material handling machines with some human-like movements. They will play active roles in the production process.

For example, instead of simply bringing a piece of bar stock to a lathe and later moving it to another work station, tomorrow's robot will be given a variety of instructions to follow, depending on variables. It may be told to move the work piece to any of a number of stations, reject it or just hold it for a moment till needed.

As cutting inventory to the bone has grown into almost a religion among manufacturers, the robot's job as a fast and adaptive manufacturing worker rather than a transporter will grow.

That technology development will cost heavily in terms of money and talent. There won't be enough of either to go around, and there will be more disappearances.

Alabama dealers elect

The Automobile Dealers Assn. of Alabama has elected officers for 1985-86. They are, seated from left: Ray Miller, Ray Miller Buick, Florence, president; Don Grady, Grady Buick Co., Mobile, first vice president, and Julian Lowe, Lowe Motor Co., Roanoke, second vice president. Standing, from left, are: Butch Anderson, Woody Anderson Ford, Huntsville, third vice president; Tom Dyas Jr., Tom Dyas Chevrolet-Olds, Sylacauga, secretary-treasurer, and Harold E. Streetman, Montgomery, executive vice president.

*Nissan includes domestically-built units in Tennessee.

Project draws criticism; parent firm sued

Problems mount for Zoe 3-wheeler

Continued from Page 3

year-old problem with press releases.

"Our lawyers were dumbfounded (by the decision)."

He added that the ruling is being appealed.

Although McPherson insists that ZoeTrans is only partly owned by Zoe Products, Inc., a May 30 press release refers to the parent as the majority owner. Stock in the company is traded as Zoe Products, Inc.

The SEC action isn't the only court case against Zoe. Joseph Basso, who heads Basso Advertising, said his firm is filing suit against Zoe to collect money owed the firm. Basso said his firm worked for Zoe for about six months before resigning the account earlier this year.

Basso declined to comment further on the suit, but according to sources familiar with the relationship, Zoe owes Basso between $20,000 and $30,000 and used boards and other artwork prepared by the agency without paying for it.

ZoeTrans is also being sued in Philadelphia by a former dealer, Bill Baldwin, who owns a Buick store in Schillington, Pa. Baldwin is seeking repayment for two damaged Zoe Zippers that he returned to the company.

Zoe has been actively seeking dealers and distributors for more than a year and company officials told Automotive News last summer that EPA certification was near. Since then, a number of people associated with the project have left, including Dan Levitan, executive vice president of ZoeTrans and a director of Zoe Products, Inc.

Levitan, who had worked with Zoe for about a year, resigned last Oct. 31, citing undercapitalization as one of the primary reasons for his departure. Levitan said the failure on the part of Zoe to federalize the Reliant to date is proof that there isn't enough money to set up U.S. distribution for the three-wheeled vehicle. In addition, Levitan said Ligier, a French manufacturer of small four-wheel vehicles pulled back from its intent to use Zoe for distribution after checking into the company's credit.

"It's a scam," Levitan said, charging that McPherson is using the car to "sign up dealers and have them come up with $10,000 to $15,000 in parts packages. The guy doesn't even have $1 in parts in that company."

McPherson admits that the firm's startup has been rocky, but attributes the delay in certification to the number of changes made to the three-wheeler. The several prototypes that Zoe has in the country have had their rear tracks widened from 48 to 64 inches to increase stability, a new carburetor fitted to ostensibly pass U.S. emissions and an air conditioning system has been developed at Zoe's expense, according to McPherson.

As for Ligier, McPherson contends that the agreement is simply dormant as Zoe works to bring in the Reliant product. He added that the car is "on schedule" on a revised timetable that has the vehicle completing certification by the end of August. An EPA spokesperson in Ann Arbor, Mich., confirmed that the Reliant has not been certified and that EPA doesn't even have an application on file. Yet, one distributor contacted by Automotive News said

Five doors, new engine for Ritmo

Fiat has added a five-door version of the Ritmo 105 to its European lineup and has given the series a new name: Ritmo 100S, for Super.

Fiat adding new engines for Panda, restyled Ritmo

TURIN, Italy.—Fiat has added a five-door hatchback to its Ritmo 150 series, added a new diesel engine for the Ritmo (Strada), and is believed to be preparing to add a three-cylinder engine to its Panda range.

Pandas currently are powered by 652-cc two-cylinder and 903-cc four-cylinder engines and, in the version built by Fiat's ex-partner in Spain, Seat, by an 850-cc four.

But Seat now is associated with Volkswagen and Audi, not Fiat, and beginning next year, Fiat no longer will be required to buy Seat-built Pandas. Because Seat will continue producing its version of the car, Fiat will use the new so-called Fire engine to make its Pandas more attractive, although more expensive, to buyers.

The new engine is to be either 675 or 750 cc, with power in the 35-HP range.

Daily production of the engine (also slated for Uno) is increasing dramatically, and the engine is cheaper to produce than the old four-cylinder power plant.

Fiat also hopes the switch will stop the Uno 45's increasing bite into Panda's sales.

The cleaner Fire engine will be easily adapted to meet emission standards in Austria, Switzerland and Germany.

A turbodiesel also is in the works for Uno and is expected to bow this year.

A notchback Uno, called Premio, has been launched in Brazil. European introduction is likely to come late in 1986.

The new five-door Ritmo 105 is changed mainly in styling and mainly in the rear. It has been renamed the 100 Super, replacing the 105 TC. The new Ritmo diesel engine is 10 percent lighter, 7 percent more fuel-efficient and more powerful (maximum horsepower of 60).

50-day inventory as June opens

U.S. car supply lowest in a year

Continued from Page 1

inventories with its incentives on Lancer and LeBaron GTS, as did Buick and Oldsmobile with their programs for N-cars Somerset Regal and Calais.

There were no incentives in the standard-size-car class, and sales and inventories held pretty steady. The high stocks of Grand Marquis and Crown Victoria reflected stockpiling in anticipation of a prolonged plant shutdown.

Sales jumped in the luxury segment, led by incentive-wrapped Cadillac Sevilles and Eldorados. Lincoln's incentives on its luxury cars didn't improve their sales rates, but at least they didn't lose ground to the Cadillacs.

The new-car inventory was split this way on June 1: Subcompact, 17.40 percent; compact, 19.85 percent; intermediate, 34.92 percent; standard, 14.77 percent, and luxury, 13.06 percent.

One month earlier, the (revised) breakdown was subcompact, 17.59 percent; compact, 18.99 percent; intermediate, 35.33 percent; standard, 15.37 percent, and luxury, 12.72 percent.

The June 1 shares of inventory by company were GM, 51.58 percent; Ford, 27.10 percent; Chrysler, 16.93 percent; AMC, 2.92 percent; Volkswagen (domestics only), 1.02 percent; Honda (domestics only), 0.32 percent, and Nissan (domestics only), 0.13 percent.

One month earlier, the shares were GM, 52.30 percent; Ford, 27.76 percent; Chrysler, 15.62 percent; AMC, 2.81 percent; VW, 0.98 percent; Honda, 0.45 percent, and Nissan, 0.08 percent.

The domestic cars by size class and their June 1 days' supplies:

Subcompact—Alliance, 111; Encore, 108; Laser, 81; Chevette, 79; Daytona, 71; EXP, 63; Charger, 54; Horizon, 52; Omni, 50; VW Golf, 50; Turismo, 48; Lynx, 45; Fiero, 41; Pontiac 1000, 35; Escort, 32; domestic Nissan Sentra, 23, and domestic Honda Accord, 9.

Compact—Eagle, 204; Aries, 91; Reliant, 82; Firenza, 79; Cimarron, 73; LeBaron, 72; Capri, 68; Camaro, 61; Skyhawk, 61; Topaz, 55; Tempo, 48; Mustang, 41; Firebird, 34; Cavalier 23, and Sunbird, 21.

Intermediate—New Yorker/E-Class, 97; Marquis, 88; Caravelle, 75; Thunderbird, 73; Dodge 600, 72; LTD, 70; Lancer, 70; Citation, 65; Grand Prix, 63; Cougar, 60; Regal, 59; Monte Carlo, 58; Bonneville, 54; LeBaron GTS, 50; Century, 39; Skylark, 37; Celebrity, 36; Cutlass Supreme, 36; Cutlass Ciera, 31; Pontiac 6000, 30; Somerset Regal, 26; Calais, 23, and Grand Am, 14.

Standard—Grand Marquis, 93; Crown Victoria, 87; Chevrolet, 59; Parisienne, 56; Diplomat, 53; Oldsmobile 88, 50; Plymouth, 49, and LeSabre, 46.

Luxury—Toronado, 93; Continental, 92; Mark VII, 92; Fifth Avenue, 82; Cadillac, 79; Riviera, 78; Oldsmobile Ninety-Eight, 72; Electra, 67; Lincoln, 54; Corvette, 52; Seville, 45, and Eldorado, 39.

Four-door look in six-door limo

Hess & Eisenhardt Co., Cincinnati, has introduced a nine-passenger Formal limousine with the appearance of a four-door, but with center doors that open conventionally from the inside and with electric buttons from the outside. The Formal may be ordered based on Cadillac's front-drive DeVille (shown) or on its rear-drive chassis.

Early-June new-car sales climb to seven-year peak

Continued from Page 2

American Motors dropped 27.38 percent to sales of 2,360 from 3,250. Honda experienced one of its few declines in early June, dropping 11.34 percent to 1,845 from 2,081. Nissan' June 1-10 sales were estimated at 750 this year, its first in the domestic market.

Shifting market shares left GM up slightly to 59.84 percent from 59.45 percent last year. Ford slipped to 24.40 percent from 24.75 percent. Chrysler held 13.01 percent, up from 12.50 percent.

AMC was down to 1.09 percent from 1.74 percent, while VW edged up to 0.46 percent from 0.44 percent. Honda dropped to 0.85 percent from 1.12 percent and Nissan earned 0.35 percent of the recent 10-day domestic market.

All three Chrysler makes were up and two of the three Ford makes posted early-June gains. Plymouth sales were up 9.96 percent, Chrysler was up 41.81 percent and Dodge climbed 11.70 percent. Ford was up 20.54 percent, Mercury was up 4.35 percent and Lincoln dropped 5.08 percent.

At GM, Buick was up 72.75 percent, Chevrolet was up 16.53 percent, Pontiac climbed 8.80 percent, Cadillac was up 7.67 percent while Oldsmobile dropped 11.33 percent.

American Motors' AMC Eagles were down an estimated 40.00 percent, Renaults were down 24.53 percent, VW was up 18.65 percent, Honda dropped 11.34 percent and Nissan had no year-ago numbers.

Based on eight selling days each year, the daily rates were 27,071 this year versus 23,345 in 1984. Year-to-date sales were up 4.02 percent, to 3,854,298 from 3,705,462.

Ford Escort was the top-selling nameplate for the period with sales of 12,928 units. Second was the Buick Century at 10,924, followed by Olds Cutlass Ciera at 10,254, Chevrolet Celebrity at 9,443 and Chevy's Cavalier at 7,877.

'Recapture' provisions unfair, GM chief tells senators

Smith finds flaws in tax program

Continued from Page 6

posed changes in this area could "detract from the overall improvement in our nation's international competitive position."

"Just as the tax system should not favor multinational activity, neither should it hinder such activity," Smith said.

Smith also spoke in favor of allowing the full deduction of corporate dividend payments. He said this "would remove the bias in favor of debt financing and promote the strenghtening of corporate balance sheets through the issuance of additional securities." The President's tax proposal allows a 10 percent deduction for corporate dividends.

In testimony before the House Ways and Means Committee, Dick Warden, UAW legislative director, criticized the proposed tax plan saying it "contains many objectionable provisions."

Warden said the union is concerned that the plan may cost the Federal Government revenue that is needed to "fund vitally necessary services and programs." To that end, the UAW is prepared to support a plan that raises additional revenue, attacks the deficit problem and finances urgently needed social programs, Warden said.

The UAW contended that this would not be accomplished by taxing employer-provided health insurance benefits or eliminating deductions for state and local taxes.

The union also criticized provisions in the tax plan dealing with retirement savings, taxation of unemployment and worker compensation income and elimination of the second-earner deduction.

The union also attacked limitations on employe business expenses, including union dues, and elimination of the checkoff for the public financing of Presidential elections.

Warden praised the Reagan plan for abolishing the taxation of Americans at or below the poverty line. He said, "The UAW is pleased that the President's package would require corporations to carry a greater share of the tax burden," although the "present proposals in this area do not go far enough."

Warden also said the union favors "higher rates for wealthy taxpayers," and he complained that middle-income wage-earners were not being given tax breaks commensurate with those given low-income and high income taxpayers.

Finally, the UAW urged the elimination of general investment incentives and incentives for research and development. Instead, the union proposed government-administered grants awarded on a case-by-case basis.

Ex-Dodge dealer charged in van conversion scheme

Continued from Page 6

by check," Frese said.

Both Van Expess and Chrysler cooperated fully in the investigation, Frese said.

The indictment charges that in the period covering roughly October, 1982, through December, 1983, Van Express kickback payments to Dunitz totaled approximately $221,300.

The indictment alleges that Chrysler was defrauded out of its fair share of the dealership's income.

Frese explained that this charge involves a legal technicality. It is not that Chrysler was entitled to a share of the illegal kickbacks, but that they could be considered rebates to which the company would have been entitled.

A Chrysler spokesman said that one way to look at the fraud involved in the scheme was that Chrysler was paying for the kickbacks, since they were billed to the dealership, which was not operating at a profit.

The dealership's customers were also paying, since the money pocketed by Dunitz was reflected in the price of the van conversion, the spokesman said.

Shop volume shows best gain in 14 months

Continued from Page 1

1984 figure.

Sales of all parts and accessories during the month were 14.3 percent higher than a year ago, while sales of the same items to outside customers showed an increase of 9.5 percent.

Through April, total customer-paid and warranty labor sales was the No. 1 indicator, with a gain of 13.4 percent over volume in the corresponding period a year ago.

In the runner-up spot was shop-parts sales, which were 11.2 percent higher than the previous year. Repair orders written in the first four months were up 10.5 percent from 1984, while gross profit on all labor and P&A sales showed a gain of 10.1 percent.

Four-month sales of all parts and accessories were 7.1 percent higher than the previous gain, and over-the-counter sales to outside customers were up 4.2 percent from the like period in 1984.

Service Index figures are compiled from reports on shop business from a cross-section of the nation's new-car dealers.

Cellular service begins

SAN FRANCISCO.—Bay Area Cellular Telephone Co., operating as Cellular One, is providing cellular service to the San Francisco Bay Area's mobile and portable telephones.

SERVICE INDEX
118.6★

	April, '85 vs. April, '84	4 mos., '85 vs. 4 mos., '84
Gross Profit on All Labor and P&A Sales	+18.2%	+10.1%
Repair Orders Written	+21.4%	+10.5%
Total Labor Sales (Customer & Warranty)	+23.5%	+13.4%
Shop Parts Sales (Customer & Warranty)	+20.6%	+11.2%
Sales of All P&A	+14.3%	+7.1%

★—Survey by Automotive News shows that dealers' service and parts business in April, 1985, was 118.6 percent of business in April, 1984. Service business in the first four months of 1985 was 109.9 percent of business in the corresponding period in 1984.

As first 1986 models are built

Year's output passes 4 million

By Louise Kertesz
Detroit Reporter

With the first 1986 models (Buick Somerset Regals) coming off the line at General Motors' Lansing plant, U.S. auto production passed the four million mark last Thursday (June 13), six days ahead of 1984.

Last week's estimated production of 163,479 cars was down 7.53 percent from the previous week's 176,787, in part because of reduced overtime, and in part because of model changeover at GM's Lansing plant. (The 1985 Oldsmobile Calais and Pontiac Grand Am built out during the week ended June 8.)

Last week's scheduled production was about the same (up 0.87 percent) as the year-ago week's 162,068.

So far this year, 4,063,336 cars have been assembled, 2.95 percent more than the 3,946,981 built last year at this time.

Last week's estimated production was shared as follows: General Motors, 54.88 percent; Ford Motor Co., 20.59 percent; Chrysler Corp., 17.68 percent; American Motors, 2.23 percent; Honda of America Mfg. Co., 1.93 percent; Volkswagen of America, 1.15 percent; Nissan Motor Mfg. Co., U.S.A., 0.78 percent, and New United Motor Mfg. Co., 0.76 percent.

The 1985 Ford LTD and Mercury Marquis were built out in Chicago last week, and 1986 models are scheduled to come off the line this week (June 17).

General Motors scheduled two overtime shifts Saturday (Sept. 15) at its plant in Leeds, Mo.

Ford has scheduled daily overtime this week at the following plants: Lorain, O.; Dearborn; Wixom, Mich.; Edison, N.J.; Wayne, Mich., and Kansas City.

Chrysler's plants in Belvidere, Ill., and St. Louis (Nos. 1 and 2) are slated to operate two nine-hour daily shifts this week.

Chrysler's Jefferson (Detroit) plant is scheduled to operate two 8½ hour daily shifts this week.

Toyota Cressida fares best in latest 35-MPH crashes

WASHINGTON.—The government last week released crash data on another five vehicles in its experimental New Car Assessment program, and the results showed once again that there is a wide disparity in the amount of protection provided by different vehicles.

The data is obtained from crashes into a barrier at 35 MPH. The vehicles contain belted, instrumented dummies. The 35-MPH speed is 5 MPH higher than current regulations require.

In the latest set of tests, a Toyota Cressida four-door came out "best," with head-injury-criteria (HIC) numbers of 883 and 914, respectively, for the driver and passenger.

In general, the lower the HIC, the less likely that drivers and front-seat passengers would be seriously injured or killed in a frontal crash. An HIC of 1000 denotes survivability.

The poorest performer, from a driver's perspective, was the Audi 5000-S four door which came in with an HIC of 2105. However, the HIC for the front-seat passenger was 557.

Other vehicles crashed were the Mercury Merkur with HIC values of 1009 and 1450 for driver and front-seat passenger; the Volkswagen Vanagon with HICs of 1905 and 1060, and the Ford Tempo four-door with HIC values of 1207 and 932.

The latter vehicle had been crashed earlier and registered an HIC for the driver in excess of 2200.

NHTSA has been running its assessment program since 1979 as part of its effort to generate reliable data on the crashworthiness of new cars. Eventually, the safety agency is supposed to run such a program as a matter of course and provide the comparative data to consumers on a regular basis.

GM challenge grant aids Ohio tornado victims

DETROIT.—General Motors has announced a $1 million challenge grant to assist victims of the tornadoes which struck the Mahoning Valley in Ohio.

In addition to an immediate $100,000 contribution to the Trumbull County Chapter of the American Red Cross, GM has issued a challenge to all GM employes in Ohio. GM will match dollar-for-dollar all contributions by GM employes in the state and will provide up to $1 million "to help meet the needs of GM people who have suffered losses."

Truck production down 5 percent from 6-year high

Domestic truck makers scheduled a build of 73,109 units last week, 5.16 percent fewer than the previous week's 77,086. That total was the best output for any week since the week ended May 19, 1979, when 81,851 trucks were assembled.

It was the second time in four weeks that the makers achieved the highest weekly production in more than six years.

Last week's production was 13.83 percent better than the year-ago week's 64,227.

So far this year, 1,634,858 trucks have been assembled, 9.73 percent more than the 1,489,836 completed last year at this time.

Ford's St. Louis plant, which reopened at the beginning of the month for production of the Aerostar minivan, was down last week while adjustments were being made to the line.

General Motors scheduled two overtime shifts Saturday (June 15) at its plant in Moraine, O.

Chrysler Corp.'s Warren (Mich.) plant is slated to operate two nine-hour daily shifts this week (June 17).

Daily overtime is scheduled this week at the following Ford Motor Co. plants: Wayne, Mich.; Kansas City; Norfolk; Twin Cities; Lorain, O., and Louisville.

Overtime is scheduled Saturday (June 22) at Ford's Kansas City plant.

Canadian output of cars stays above 25,000

Canadian auto makers scheduled production of 25,776 units last week, about the same (down 0.13 percent) as the previous week's 25,809, which was the highest output for the week in more than two years.

The past three weeks have seen the best weekly builds since the week ended May 14, 1983, when 27,994 cars were assembled.

Last week's targeted production was 9.02 percent better than the year-ago week's 23,644.

So far this year, 497,810 cars have been assembled, 8.40 percent fewer than the 543,439 completed last year at this point.

American Motors' Brampton (Ont.) plant was down last week for inventory adjustment. It is scheduled to resume production today (June 17).

Truck makers planned assembly of 18,793 units last week, 1.95 percent fewer than the previous week's 19,166 but 6.07 percent more than the year-ago week's 17,717.

Year-to-date, 426,014 trucks have been built, 6.63 percent more than the 399,539 assembled last year at this time.

Daihatsu heads for U.S.; debut scheduled for '87

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—The last of Japan's nine automobile manufacturers has decided to get its share of the U.S. car market.

Daihatsu Motor Co., a manufacturer of minicars, announced it will begin exporting vehicles to the U.S. in late 1987, and that they will be sold through its own dealer network.

Daihatsu said it will form a subsidiary, tentatively called Daihatsu of America, probably somewhere on the West Coast, next summer to create a marketing network by inviting applications for dealerships.

Daihatsu, the only Japanese auto maker which does not export to the U.S., said it expects to finalize plans for its new venture, including sales projections and the number of dealerships it will sign, by spring. Exports of its Charade model will start in the fall of 1987.

According to sources here, Daihatsu initially planned to ask Toyota Motor Corp., which owns 15 percent of Daihatsu, to handle its U.S. sales. It discarded the plan because Toyota is too busy with its own products, they said.

Daihatsu's chief competitor is Suzuki Motor Co., which has been selling its minicar in the U.S. as the Chevrolet Sprint. West Coast Chevrolet dealers handle the car.

Daihatsu said it has not exported vehicles to the U.S. because it did not have the kind of cars it wanted to sell. Another reason for the delay in entering the U.S. market was the lack of the kind of marketing tieup Suzuki has with General Motors.

Daihatsu Motor Co., Ltd., is at 1-1, Daihatsu-cho, Ikeda-shi, Osaka, Japan. Its telephone number is (0727) 51-8811. Telex is 0-5322-224 (532224 DAIHAT J).The company has no office in the U.S. yet.

In addition to minicars and four-wheel-drive utility vehicles, Daihatsu produces minivans, buses and two- and three-ton trucks.

The front-drive Charade rides on a 91.3-inch wheelbase, is 139.8

Please turn to Page 54, Col. 3

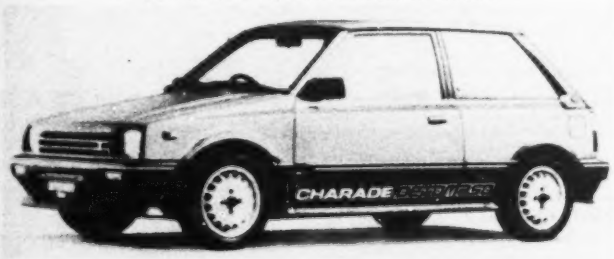
Olds 88 for '86

Jim Dunne

New body, new chassis, front drive

The 1986 Oldsmobile 88 will have an all-new body and chassis and will use V-6 engines exclusively. Engines will be fuel-injected 3.0- and 3.8-liter V-6s set sideways in the front-drive setup. Overall length will shrink by two feet to about 196 inches, while the wheelbase will be 10 inches shorter at 105.8 inches. Result of the shrinking will be a curb weight cut of about 400 pounds to the 3,200-pound level.

For U.S. from Daihatsu



Charade hatchback to arrive in late '87

Japanese auto maker Daihatsu plans to enter the U.S. market with its mini-hatchback Charade in late 1987. The car is the size of Chevy's hot-selling Sprint, made by Suzuki.

Technology studied to boost output of front-drive cars

Makers prepare for '87 HP race

By Dan McCosh
Detroit Reporter

New technology that will allow front-drive cars to accommodate high-horsepower engines is being studied carefully by General Motors, Ford Motor Co. and Chrysler Corp., according to sources close to the program.

The technology involves a viscous-drive limited-slip differential. It is expected to be offered in 1986 by BMW in a rear-drive model.

The upcoming horsepower race —anticipated by 1987, when high-output entries are expected from most domestic manufacturers—is stretching the ability of standard front-drive transaxles and suspension systems to provide sufficient traction and control, say engineers working with the new power plants.

In 1987, Chrysler will introduce a special-bodied Dodge Daytona with approximately a 16-valve 225-HP turbocharged, intercooled version of the 2.2-liter four-cylinder engine.

The Pontiac Fiero also is expected to have a 225-HP turbocharged version of the 2.8 liter V-6, while Ford is expected to introduce a four-valve-per-cylinder version of its 3.0-liter V-6—a joint venture with Japan's Yamaha Motor Co.—likewise in the 1987 model year.

The new engines will be producing horsepower equivalent to the high-output small-block V-8s popular in the 1950s and 1960s. But with some exceptions—including the mid-engine Fiero and the rear-drive Corvettes and Thunderbirds—most will be in cars with front-drive configurations.

While there is considerable debate over the issue, most engineers working with the standard front-drive layout common in most production cars today say that about 200 HP is the upper limit for such systems.

Above that point, both traction and so-called "torque steer" become problems. Torque steer is the phenomenon where engine torque is felt strongly in the steering wheel.

However, a new system using a viscous-drive coupling, developed by Britian's GKN, Ltd., is currently being tested by GM, Ford and Chrysler to enhance two-wheel-drive traction.

BMW reportedly will offer a rear-drive, viscous-coupled independent rear-suspension system in 1986, the first volume-production car to use the new anti-slip technology. Ford has been testing the system on the rear-drive

Introduction a success; cars sell close to sticker

Chevy Nova a winner, dealers say

By Edward Lapham
Marketing Editor

The Chevrolet Nova sales launch is gaining momentum and early dealer reaction indicates the car will be a winner, according to an Automotive News dealer survey.

Nova, the first byproduct of the General Motors-Toyota liaison, officially went on sale June 13 at Chevrolet dealerships in 25 Midwest states June 13.

Chevrolet estimated that 5,000 to 6,000 Novas were sold the first week.

Every Chevrolet dealer contacted raved about the product and its importance to his marketing efforts, but there was a whole range of initial launch experiences which varied from store to store.

Although the data was limited and early buyers are often different from later buyers, there seemed to be some preliminary trends.

1. Most dealers reported they were getting full sticker price on the Nova.

Those dealers who said they were dealing because they wanted to move cars,, claimed they were still getting "close to sticker."

2. The factory's pre-production planning mix of 60 percent automatic transmissions was a good match for first-week demand.

• In fact, there were very few complaints about option packages.

3. There seemed to be a sufficient number of vehicles in dealer inventory on launch day, although some dealers said they had only a single vehicle and had to write orders.

4. In almost every instance, dealers reported a measurable increase in showroom traffic.

However, many dealers reported that pre-weekend traffic was discouraging but heavy network advertising over the June 15-16 weekend brought dramatic increases in showroom interest.

Despite those early trends, there was no clear-cut tradein pattern.

There definitely was not the overwhelming import conquest factor which factory officials wanted.

"We took everything in trade from an Olds Ninety-Eight to a Toyota," said Mike Weiss, general sales manager at Z. Frank Chevrolet, Chicago.

"It's too early to say for sure what the trend will be."

Weiss said there seemed to be a little higher percentage of women shoppers, as well as some apparent import shoppers.

"Response has been good, but they're not knocking doors down or crashing through the windows," he said. "But we're going to treat this car as a 'must sell' and each day is going to get stronger.

"We think it's going to snowball."

Kool Chevrolet, Grand Rapids, Mich., sold one Nova on the opening Thursday and three the following Monday, after the ad blitz.

"We didn't take any trades," said sales manager Steve Johnson. "They were all cash deals.

Johnson said Kool had 12 cars in stock on launch day and that the zone promised a wait of about 30 days on orders.

"Customers seemed to be adding a car to the family and they seemed to be regular Chevrolet

GM cuts luxury-car finance rate

DETROIT.—General Motors is offering 9.9-percent financing through July 1 on its front-drive Oldsmobile 98 Regency, Buick Electra and Park Avenue and Cadillac DeVille and Fleetwood. GM said sales of luxury cars tend to slow down during the summer, and the company wants to keep the C-car momentum going. GM has 8.8-percent financing on Chevrolet and GMC half-ton and three-quarter-ton pickups. Ford Motor Co. has 8.8-percent financing on F150 and F250 pickups, and Chrysler Corp. has that rate on Dodge Lancer and Chrysler LeBaron GTS models.

Cappy named AMC executive vice president

SOUTHFIELD, Mich.—Joseph Cappy has been elected executive vice president—operations for American Motors. He had been group vice president of sales and marketing since 1984 and now will be responsible for those activities plus International, Manufacturing and Supply. He joined AMC in 1982, coming from Lincoln-Mercury Division, where he was general marketing manager.

Gulfstream: A new path for Chrysler

By Michelle Krebs
Financial Editor

Chrysler Corp., which sold off its non-auto businesses as it teetered on the brink of bankruptcy, made its first major move toward diversification with its $637-million purchase of Gulfstream Aerospace Corp.

Chrysler announced last week it would pay $19 a share for the approximately 34 million shares of Gulfstream, a manufacturer of corporate aircraft. Gulfstream is based in Savannah, Ga.

The deal will be financed by $310 million in cash and $327 million in notes. Chrysler had accumulated $2.9 billion in cash and marketable securities at the end of this year's first quarter.

Chrysler previously had announced it had obtained a six-month option for 20 percent of Gulfstream's stock, or 6.7 million shares, for $127 million from Chairman Allen E. Paulson. Paulson holds 71 percent of Gulfstream's stock.

Under the acquisition agreement, Paulson will receive a combination of cash and notes valued at $19 a share. He will remain at Gulfstream's helm for five years.

Chrysler Chairman Lee A. Iacocca said the purchase of Gulfstream "is an important step in our long-range plan to diversify into high-tech industries like aerospace and electronics, fast-growing industries like financial services, and to continue to invest heavily in the automotive industry."

Iacocca called Gulfstream "a great American company" whose product sets the standard for the industry worldwide.

He noted that Gulfstream was particularly attractive since it had remained profitable and even experienced growth through the recent recession while others in the aircraft industry did not.

For that reason, analysts have viewed Gulfstream as a plum, ripe for a takeover by other aircraft companies. In addition, its stock has sold below $19 per share, the price at which it opened when the

Chrysler passes 100,000 mark at Sterling Heights

Chrysler Corp.'s Sterling Heights (Mich.) assembly plant has produced its 100,000th passenger car, a silver 1985 Chrysler LeBaron GTS. In the milestone car are Durward W. Roller, plant manger, and new owners Susan and Chester Bonk, of Milan, Mich. The plant was acquired from Volkswagen of America in April, 1983.

2nd Austin Rover car set for North America

By Richard Feast
European Editor

LONDON.—The British Government's approval June 17 of BL's corporate plan—on which it had been sitting for six months—will provide Austin Rover with a second car line for the fledgling North American sales operation.

This second car, to be developed in collaboration with Honda of Japan like the forthcoming XX luxury model, is being referred to here as YY. The medium-range car will be launched "in the late 1980s," which would indicate a U.S. introduction date of around 1990, or three years after XX reaches North America.

The U.S. introduction of the Austin Rover Group's XX is scheduled for the 1987 model year (Automotive News, May 13).

Other key elements of the BL strategy include assembly by Austin Rover of other Honda models (possibly the Civic) for sale in Europe by Honda, and development of a new small engine to replace the venerable A-series which powers the Metro and some Maestro and Montego models.

After the announcement in the House of Commons by Trade and Industry Secretary Norman Tebbit, Austin Rover Chairman Harold J. Musgrove and Honda Motor Co. Chairman Noboru Okamura signed a statement of understanding.

The fourth element of that understanding contains a fair degree of Japanese inscrutability. It says, "Honda will study the feasibility of the possible establishment of an engine manufacturing plant in Swindon. The engines to be considered for production there would be supplied to ARG (Austin Rover Group) for installation in the Honda vehicles to be built by ARG and in the Rover 213."

The likelihood of Honda building engines at the recently acquired 330-acre site at Swindon has been raised before (Automotive News, Feb. 18), but has always been denied. But without using U.K.-built engines, it is difficult to see how Honda can achieve 70 percent local content for the models that ARG is to assemble on its behalf.

No volume has been put on this assembly operation, but the volume would have to be substantial to justify an engine plant at Swindon. At present, powertrains for the Honda Civic-sedan-based Rover 213 series are sourced from Japan.

At first glance, there would seem to be a duplication in effort between a U.K. Honda engine factory and the $325 million decision in the BL plan to replace the A-series engine: Both are four-cylinder engines of about 1.3-liter displacement.

One possibility is that Honda will concentrate on producing power units (for itself and ARG) in the 1.3-liter and 1.6-liter category, while ARG's new engine—known as the K-series—will be a smaller-displacement unit of 750 cc to 1 liter, possibly in three-cylinder form. Again, it would be used by both companies.

Such an arrangement would be a logical extension of the mutual design, development and production being undertaken for XX and

Please turn to Page 52, Col. 3

Aerostar may adopt independent suspension

By Dan McCosh
Detroit Reporter

Ford Motor Co. is considering a fully independent rear suspension for its rear-drive Aerostar minivan, Automotive News has learned.

The move would solve one of the major disadvantages of Ford's existing rear-drive layout, compared with Chrysler's front-drive van: The high floor needed to clear a conventional solid rear axle.

The configuration Ford is studying would be a fully independent rear axle, featuring composite springs and a new type of limited-slip differential. Unlike the solid rear axle, which needs additional clearance under the load floor, independent suspension requires clearance only for the wheels—which means the floor could be lowered as much as six inches.

Improved ride, handling and traction also are cited as advantages of independent rear suspension, although the additional cost is rarely seen on commercial vehicles. But by offering some of the advantages associated with front-wheel drive, without its major disadvantage—fwd's poor load-carrying ability in truck applications—independent rear suspension is appealing to Ford's minivan development team.

The system Ford is considering is similar to the suspension on current Corvettes. It would be one of the most sophisticated rear suspensions ever considered for a rear-drive van.

The program parallels current design efforts to enhance the "car-like" qualities of minivans, as both domestic and foreign vans win more acceptance among former car and station wagon buyers.

Ford is alone among the domestic manufacturers without an active front-drive van program at the current time, although it is considering importing a Japanese-built front-drive van from Mazda in the 1987 time frame.

Japanese push import stockpile to 27-month high

By Kathleen Hamilton
Assistant Managing Editor

Japanese car makers continued pumping up their inventories last month, inflating the stockpile of all new imported cars at dealerships and ports to a 27-month high.

But the cars sold as fast as they were unloaded, and the June 1 days' supply fell back to 29 days—the same level it was two months ago.

There were 297,000 import cars in stock as June opened, the highest count since March 1, 1983, when there were 316,745. At the beginning of May, the count was 262,444. That was good for 34 days. On June 1, 1984, the count was 213,780, a 23-day supply.

Nearly all the increase since last month was due to extra Japanese cars allowed by relaxed quotas. The Japanese inventory stockpile was up about 30,000 units.

Import-truck inventories on June 1 stood at 92,815 units, the lowest level in nine months. The truck stockpile last dipped lower on Sept. 1, 1984, when there were only 75,352 units in stock. The month-ago stockpile was 90,286; year-ago, 73,652. Import-truck figures include Nissan's U.S.-built units.

The June 1 truck stockpile was good for 31 selling days, the lowest in four months. On May 1, there was a 32-day supply of trucks. On June 1, 1984, there was a 29-day supply.

Combining cars and trucks, the total import inventory on June 1 was 389,815 units, a 29-day supply. One month earlier there were 352,730 import vehicles in inventory, a 34-day supply. On June 1, 1984, the count was 287,432, a 24-day supply.

Nearly all the lines that increased their days-supply figures this month did so purposely; few of the increases were due to decreased sales rates. Most import-

Metrix damage award thrown out by court

By Jake Kelderman
Washington Reporter

BALTIMORE.—A federal judge here has thrown out a $7-million jury award to Metrix Warehouse for damages it allegedly suffered at the hands of Mercedes-Benz of North America.

The damages stemmed from an allegedly illegal tie between the MB franchise and original-equipment parts sales.

Judge Edward S. Northrup said the jury had not adequately taken into account the legitimate purposes and needs of the auto company in deciding on the award. The award was three times the $2.3 million Metrix said it suffered in actual damages.

In ordering a new trial on the damages issue, however, Judge Northrup did not reverse the jury's more-important original finding that Mercedes-Benz did violate Section 1 of the Sherman Antitrust Act; that is, illegally tying its parts sales to new-car sales.

The independent parts warehouse had contended that by specifying only original-equipment Mercedes-Benz parts to its dealers, the company had significantly impinged on the warehouse's ability to compete.

Mercedes-Benz had held that the tying arrangement was necessary to preserve goodwill with its customers by protecting the quality of Mercedes-Benz automobiles.

The original jury decision, handed down April 18, was lauded by the aftermarket as a victory for consumers and a warning to the Japanese and other makers "whose parts policies tend to parallel those of Mercedes."

The aftermarket maintains its parts are the equivalent of original-equipment parts and should not be discriminated against by manufacturers.

Dale Cooter, attorney for Metrix Warehouse, said the decision by Judge Northrup would be appealed to the Fourth Circuit Court of Appeals.

A spokesman for MBNA said that while the company was pleased by the judge's decision regarding the jury's damage award, it plans to appeal the antitrust decision.

In addition to overturning the jury's damage award, Judge Northrup also overturned its holding on a related matter in which MBNA had counterclaimed that Metrix had illegaly induced dealer parts managers, through coupons redeemable for gifts from a catalog, to buy from it in violation of the Robinson-Patman Act.

The jury had held that no such violation had occured and MBNA had suffered no damages.

The Metrix Warehouse case against MBNA was filed in November, 1979.

But drop in retail loan rates will take time

Lower prime to cut floorplan cost

By Michele Krebs
Financial Editor

The reduction in the prime rate translates into an immediate lower rate for dealers on floorplan financing, but dealers shouldn't expect a sudden onslaught of showroom traffic because retail rates will take time to drop.

Major banks across the U.S. last week cut their prime lending rate one-half a percentage point to 9.5 percent. The prime is tied to other lending rates.

It was the first time since 1978 that the prime had fallen below 10 percent. It was the third cut this year, and it is expected to be followed by a drop of at least another one-half a percentage point.

The prime was 12.5 percent at this time last year and was as high as 20.5 percent in 1980 and 1981.

John Gilker, marketing manager for Ford Motor Credit Corp., said dealers will immediately feel a favorable impact from the lower prime in terms of floorplan financing.

G. Thomas Patton, executive vice president of General Motors Acceptance Corp., added that dealers will benefit from lower rates on other financing, including real estate and working capital loans, which are tied to the prime.

However, a drop in consumer loan rates including car loan rates may be slower in coming.

Dealers often complain that downward movements in car loan rates lag far behind a drop in the prime rate. The lag can be three to six months. But consumer rates rise quickly if the prime moves upward.

Neverthheless, lenders contend they cannot forecast interest rates over the life of the car loan, which averages 18 to 30 months.

They generally do not tie consumer loan rates to the prime rate; instead, they use longer-term measures such as the 18- to 30-month U.S. Treasury Bill rate. Consumer loan rates also are dependent upon other factors including marketplace competition.

Nevertheless, GMAC's Patton contended that the lower prime will put pressure on lenders to drop consumer rates.

Aside from dealer floorplanning, the auto makers' captive finance companies will benefit from a lower prime when forced to offer financing incentives on slower-selling models.

• The companies recently have offered 8.5 percent or 8.8 percent financing on some vehicles, though many of those programs have expired.

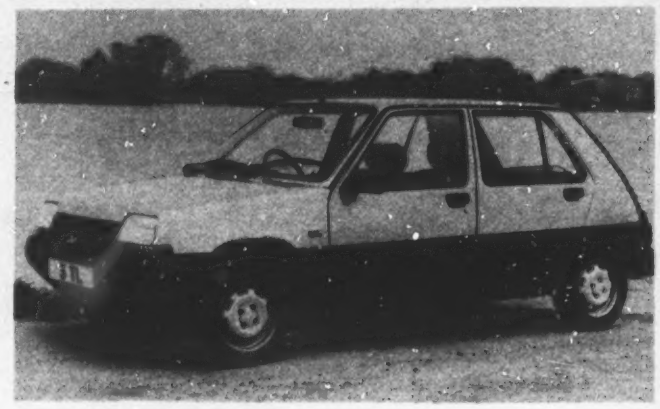
A lower prime rate makes it less expensive for the finance companies to offer the incentives.

The difference between the rate the captive finance companies offer, which is tied to a number of factors including the consumer loan rates, and their cost of funds, which is dependent upon the prime rate, has to be subsidized by manufacturing profits. When the prime drops, the gap is narrowed.

As for the general economy, analysts said the lower prime could push the dollar lower in relation to other currencies, and, in fact, the dollar tumbled when banks announced the lower prime rate. Auto manufacturers in particular have complained that high interest rates and the subsequent high dollar have given foreign car companies an unfair advantage in the marketplace.

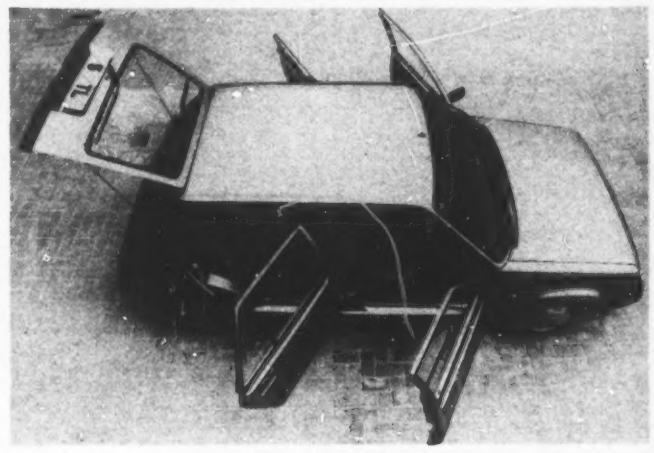
Other analysts say the prime-rate reduction reflects the general weakness in the economy. Economic activity in the traditional sectors of farming and manufacturing have been nearly stagnant for the past year.

Some, however, say the downward movement of the prime followed by other rate reductions could stimulate the economy by encouraging borrowing for consumer spending.



Renault's five-door 5

Five-door versions of the new generation Renault 5 have been introduced in France. The car has a longer (2.3 inches) wheelbase than the original three-door which made its debut last fall. The new car is expected to boost Renault sales, especially in southern European markets where five-doors sell well.



Nissan Z-car inquiry upgraded by NHTSA

By Jake Kelderman
Washington Reporter

WASHINGTON.—NHTSA has upgraded its investigation into an alleged sudden acceleration problem in 1980-1985 Nissan 280-ZX and 300-ZX sports cars following reports of some 60 incidents in which the condition occurred.

In moving the inquiry from "preliminary investigation status" to an "engineering analysis," the safety agency has indicated that the possibility of a safety-related defect exists.

In California, a Nissan spokesman said the company had completed its own investigation and had notified NHTSA that it knows of no defect in the product that could cause the alleged condition.

Nissan has sold more than 300,000 of its Z-series models since 1980.

In addition to upgrading the Nissan Z-car matter, NHTSA also has opened investigations into alleged unwanted acceleration in 1983-1984 Renault Alliances and Encores, alleged engine compartment fires in 1985 Audi 5000s and alleged front-seat-belt retractor problems in 1982-1983 Toyota Celicas and Tercels and 1983-1984 Chevrolet Camaros and Pontiac Firebirds.

At the same time, NHTSA dropped two investigations it had been conducting. They involved an alleged horn problem with 1982-1984 Buicks and a hatch and trunk-lid problem on Chevrolet and Pontiac X-cars and 1979-1982 General Motors large cars.

The safety agency said those were not "safety-related" defects. A spokesperson for the agency said that reports it has had of

Tennessee land deal: A Saturn, Nova tie?

NASHVILLE.—A Nashville attorney reportedly is obtaining options on parcels of land in Tennessee for General Motors. Speculation is that GM will use the land for construction of its $5-billion Saturn plant or a second plant to produce the GM-Toyota Nova model.

According to newspapers here, Nashville lawyer Mclin P. Davis Jr. is negotiating options to buy more than 1,000 acres of Maury County farmland.

Davis' law firm handled a major part of the legal work involved in Nissan USA's acquisition of 782 acres for the plant in Smyrna, Tenn., not far from the land in which GM supposedly has an interest.

Davis would neither confirm nor deny the reports, saying that he could not discuss a client's business.

GM also refused to confirm or deny the reports.

A GM spokesman said that it will be at least several weeks if not several months before any announcement would be made regarding Saturn.

Adding to the speculation was a recent meeting in Memphis that brought together GM Chairman Roger B. Smith, Tennessee Gov. Lamar Alexander and former U.S. Senate Majority Leader Howard Baker Jr., of Tennessee.

Meanwhile, New United Motor Mfg., Inc., the joint venture between GM and Toyota, is producing its small-car, the Nova, only at the Fremont (Calif.) plant.

Since the car was introduced June 13, sales have exceeded the number of cars shipped. The plant isn't expected to be at full capacity of 240,000 vehicles per year until next spring. A second shift will be added by year-end and by March production is scheduled to be at 20,000 a month.

Fill 'er up

Peter G. Guptill, vice president—U.S. sales for American Motors, explains the company's new 10,000 Miles of Gas on Us program to the news media. Buyers of new Renaults from June 16-July 31 will receive checks for the equivalent of enough gas to drive the first 10,000 miles.

Renault to trim output, cut French workforce

By Jean-Jacques Renaux
Special Correspondent

PARIS.—Renault will cut its Car Division workforce in France by 21,000 by the end of 1986 and will also reduce its car production worldwide from 2 million units a year to some 1.6 million.

In addition, Renault will trim its investment programs from some 9 percent of sales last year to 6 percent this year.

Renault officials insist, however, that they will not pull out of American Motors.

Decisions to reduce the work force and production came out of an extraordinary board meeting held last week. Renault officialy confirmed the job-cutting, while the other, more significant items became known a day later.

Those complementary measures were circulated on a confidential basis to the board. They provide for the first time a clear indication of President Georges Besse's strategy for turning around the Renault Group, which last year posted a loss of $1.34 billion.

Renault's goal will be to lower its break-even point and refocus investments on the Car Division in France. Today, 75 percent of the company's investments are made in France, 14 percent in the rest of Europe and 11 percent in the rest of the world.

From now on, the distribution will be 85 percent in France, 10 percent in the rest of Europe and 5 percent in the rest of the world. Those investments will be concentrated on renewing the car lines and improving productivity and quality.

According to the new management, Renault's break-even point now is more than 2 million cars a year. Production capacity is about 2 million, and actual car production this year will be around 1.6 million or less.

Besse reportedly doesn't believe that the European market will pick up significantly in the near future, nor that Renault can increase its market share consistently. His goal will be to lower the break-even point to 1.2 million cars and sell 1.6 million with a decent profit margin.

This strategy is reminiscent of what was done successfully at Fiat from 1980 to 1984. It is known that this policy was suggested to former president Bernard Hanon in mid-1984 by Stephane Doblin, who participated in the Fiat turnaround before joining Renault early last year. It seems that Doblin and the Fiat Model have found a more receptive audience in Besse.

The "Besse Plan," as it is referred to in France, still leaves many questions: What will be the consequences for Renault's operations outside the country? Will the company close any plants, drop any model range?

The plan proposed by Besse defines the objectives, a company offical said. Now the new management will go on studying the ways and means, while trying to avoid any plant closures. It will probably take a few months before Besse can be more specific on those points.

Before the end of next year, the U.S. company will get a federalized version of the Renault 18 replacement, due to be launched in France by early 1986.

The model will be adapted to the U.S. market and assembled in Renault's Vilvorde plant in Belgium, where the aborted AMC 52

Van conversion outlook continues strong

RV shipments soften in April

By Joseph Bohn
Truck & RV Editor

Wholesale shipments of RVs improved seasonally in April over March, but continued to trail year-ago levels.

The industry shipped 38,600 RVs in April, up from 34,400 the previous month. However, April's total lagged 12.3 percent behind 44,000 in April, 1984, according to the Recreation Vehicle Industry Assn.

Year-to-date, deliveries to retailers totaled 133,200, 9.5 percent below 1984's level for the fourth-month period.

Seasonally adjusted, they ran at an annual rate of more than 375,000.

Van conversions, previously one of the industry's strongest suits, dropped 9.4 percent in April to 15,500 from 17,100 a year earlier.

Year-to-date, conversion shipments totaled 57,300, off slightly from 57,500 in the four-month period last year, according to RVIA.

Manufacturers and converters, however, point out that retail sales of conversions continue to "perk along," as Don Cuzzocrea, president of Starcraft Co., Goshen, Ind., put it.

He said there is "a lot more competition" in the wholesale end of the business and that shipments, if not up to last year's record levels, are still very strong.

Starcraft's wholesale shipments are off about 7 percent this year, but are still expected to total a very strong 10,500.

Similarly, Rockwood, Inc., Millersburg, Ind., expects to wholesale about 1,800 units, off 11 percent from last year, according to Walt Gildner, vice president of sales.

Some converters, like Advanced Creations, Romulus, Mich., are still running flat-out, although they acknowledge the increased competition.

"Everybody's gotten into van conversions," said Robert Wolf, company president."The dealer who never sold them before has four to five on his lot. People who sold them before may now have 50 to 100."

Generally, some observers feel the industry overbuilt last year, but it is just a matter of time before it works off excess inventories.

Mike Erdman, Chevrolet's truck marketing manager, feels converters ran stronger on the "1984 stuff, and carried more inventory into 1935 than they normally would have" because vans became avaiilable to them in greater numbers after being previously tight.

And, to some extent, they gambled on overbuilding, with the idea that they could work themselves out of it.

Chevrolet recently met with RVIA industry officials.

Erman said, "There are no panic conditions. There's probably more inventory than the last two or three years" and "all the good feeling" for strong future sales.

If the truck market holds at 4.2 million to 4.3 million next year (it has been running at a 4.5 million annualized rate recently), van conversions will continue very strong and stable, Erdman said.

RVIA said "towable RV" shipments of 15,700 in April were off 10.3 percent from last year.

That includes travel trailer shipments of 10,800, off 12.0 percent; folding camping trailer shipments of 4,000, off 13.0 percent, and 900 truck camper shipments, equal to last year's number.

Year-to-date, the industry shipped 49,300 towable RVs, off 13.2 percent from last year.

That included 32,300 travel trailer shipments, off 16.3 percent; 14,500 folding camper trailer shipments, off 4.6 percent and 2,500 truck camper shipments, off 16.7 percent.

Motor home shipments of 7,400 were off 21.3 percent from April, 1984.

Conventional Type A motor home shipments of 3,600 were off 20.0 percent from a year ago. Van Camper Type B shipments of 600 were off 33.3 percent, and chopped van shipments of 3,200 were off 20.0 percent.

Year-to-date through April, the industry shipped 13,300 conventional motor homes, off 15.8 percent from last year; 2,100 van campers, off 22.2 percent, and 11,200 chopped vans, off 21.7 percent.

Coachmen to sell off distribution business

ELKHART, Ind.—Coachmen Industries, Inc., agreed to sell its RV and manufactured housing aftermarket parts distribution business to Coast R.V., Inc., San Jose, Calif.

The purchase price is $19 million and 550,000 Coast shares.

The transaction involves Coachmen's Coach-Lite Supply Co. and United Sales of Texas subsidiaries. Finalization is expected by June 30.

The operations accounted for 12 percent of Coachmen's sales and 6 percent of its earnings for the year ended Dec. 31, 1984.

Coachmen Chairman T.H. Corson said. "We are pleased to become part of the effort to help Coast in forming a nationwide aftermarket distribution company which will serve the dealers of the recreational vehicle and manufactured housing industries well."

He added that "from Coachmen's perspective, although our distribution system has always been an important part of our company, the sale to Coast realizes a substantial premium over book value for the business we have built over the years."

As part of the sale, too, Coachmen will receive a substantial equity position in Coast, allowing it to participate in "the benefits of the combination," Corson pointed out.

Thomas R. McGuire, Coast RV chairman, called the deal "the last major step in our plan to create a nationwide distribution company."

The combination of these companies should generate significant economies and result in even better operating margins for Coast, he added.

Coast R.V., Inc., is a wholesaler of RV parts and accessories with three regional distribution centers serving the Western U.S.

Coast recently announced its pending acquisition of Rogers Distributing, a Los Angeles-based distributor, which will become Coast's fourth regional distribution center.

Coachman Industries, Inc., is a major manufacturer of RVs with important interests in manufactured housing.

Garageable pop-up

International Vehicles Corp., Bristol, Ind., a producer of van campers, has begun offering this garageable version of its Horizon and Falcon coaches. Raised, the new top adds 30 inches of headroom to the coach; closed, it adds 4 inches to the standard van roof line. The pop-up option is as an alternative to its fiberglass top.

Durakon to supply Mazda pickup liners

LAPEER, Mich.—Durakon Industries, Inc., producer of pickup truckbed liners and other truck accessories, finalized a deal to install its liners in 45 percent of the Mazda pickups distributed through Mazda Motors of America (East), Jacksonville, Fla.

Durakon will install its Duraliner in 1985 model SE5 mid-price-range and LX luxury-price models, starting in June.

Durakon was founded in 1979. Its sales reached $27.9 million last year, and it has a worldwide distribution network.

Moving target

George Byers Sons, Inc., a Columbus (O.) dealership, uses rotary highway billboards to advertise its selection of customized vans. The billboards are moved every 60 days to catch drivers' eyes. The dealership sells Starcraft vans and has a rental fleet of 35 van units.

4-month registrations climb to alltime peak

Truck registrations continued at record levels during the first four months of 1985, generally aided by strong import sales.

Although all categories of light, medium and heavy-duty trucks showed increases for the period, medium-duties recorded the biggest percentage gain over year-ago levels.

Ford widened its lead over Chevrolet in total registrations and is poised to take over International Harvester's No. 1 spot in the heavy-duty segment.

Tables on Pages 32 and 50.

Mack had the strongest gain in market share in the heavy-duty field, though, and is nipping at GMC's heels for the No. 3 spot.

A record 1,479,920 trucks were registered in the January-April period, according to R.L. Polk & Co., up 18.5 percent from last year's previous high of 1,249,132.

Ford continued to increase its lead over No. 2 Chevrolet in total registrations with 407,868, up 12.1 percent from like 1984.

Chevrolet also recorded a nice 9.1 percent gain to 378,304 from 346,591 last year.

But both makes lost market share. Ford's share was off 1.57 percentage points and Chevrolet's was down 1.19 percentage points.

A total of 1,387,851 light-duty trucks were registered in the period, capturing a 93.8 percent share of total registrations. Light-duties were up 17.6 percent from last year's 1,179,757 tally.

Medium-duty Class 4-6 seg-

Winnebago trims motor home output

FOREST CITY, Ia.—Winnebago Industries trimmed motor home production, beginning June 17.

It began annual vacation shutdowns in some departments June 17 and in all Iowa manufacturing operations June 24.

In July, about 1,000 manufacturing people will be laid off for about three weeks.

By September, though, fewer than than 300 persons are expected to continue on layoff.

The adjustments are based on "uncertain motor home market conditions," lower than expected sales increases and 1985-model inventory control, said Winnebago President Ronald Haugen.

Production of front-drive motor homes, selling strongly, will continue this summer, along with selected standard models.

RVing in China

Nearly 200 senior citizens, such as (from left) Eleanore Cadwallader, Juanita MacKay and Vivian and Frank Sargent, of Michigan, will tour China in eight trailer caravans, beginning in September. GMC Suburbans, powered by 6.2-liter Detroit Diesel Allison engines, pulling Airstream trailers were selected for the foray into areas previously closed to Westerners.

THE ADVANTAGE

Forget everything you know about Extended Service Contracts.

Now there's The Advantage™ from Western Diversified.

This could be the most important ad that you read today. The Advantage and The Advantage Plus extended service contract from Western Diversified is the finest product on the market, and that translates into one word for you: PROFITS.

For your customers. With The Advantage, you are providing your customers with a no-hassle, comprehensive extended service contract that allows them to enjoy their new or used car "worry-free."

For your dealership. The Advantage allows you to achieve maximum profits, the greatest customer satisfaction, with no personal liability.

Western Diversified has been in the Finance and Insurance business over 22 years. They have a commitment to their dealers that has been proven over the test of time. Western Diversified is around for the duration, committed to higher profits for their dealers through better programs. The Advantage and The Advantage Plus extended service contracts are yet another of the quality programs brought to you by Western Diversified. Call us for details TODAY.

Old rivals now allies in downtown Detroit

Targeting the growing market in downtown Detroit is the new Rivertown Car Dealers Assn., consisting of, from left, Jim Tellier, general manager of Jefferson Chevrolet; Nathan Conyers, president of Riverside Ford and of the dealer group, and Dick Seymour, president of Dick Seymour Cadillac-Saab. The dealerships are located within four blocks of one another, a short distance from the Renaissance Center.

Three rival downtown deals form alliance in Detroit

DETROIT.— Three rival dealerships located within four blocks of one another in downtown Detroit have joined forces to target the growing affluent residential and commuter market.

Jim Tellier, general manager of Jefferson Chevrolet; Nathan Conyers, president of Riverside Ford, and Dick Seymour, president of Seymour Cadillac-Saab, have formed the Rivertown Car Dealers Assn., collectively representing $60 million in annual sales.

The dealerships are located a short distance from the Renaissance Center, Detroit's office-retail-hotel complex. They offer a full range of automobiles—from luxury and mid-sized cars to sports cars and small economy models.

Conyers, president of Rivertown Car Dealers, said, "The group was formed because we felt it was the most economical approach for reaching a diversified market accustomed to buying their cars in the suburbs.

"We believe our location, service, technology, experienceed staff, convenient hours and special perks—like free shuttle service to and from the office—will attract that segment of the market that passes by our showrooms every day," Conyers said.

Conyers said the new association is part of the trend encouraging people to shop downtown. The dealers plan to attract customers through a series of special promotions and community events.

"We don't intend to change our competitive spirit as a group. In fact, this may even make us more competitive," Conyers said.

"Together we offer people a more convenient source for buying a car and getting it serviced faster," Conyers said.

"Our dealerships are certainly not new to downtown Detroit, and we've all weathered the ups and downs of the auto industry. Our alliance reaffirms our commitment to the city of Detroit and the 225 people we employ."

The dealers view the redevelopment programs now underway in Rivertown—a section of the city where former factories and warehouses are being converted to office buildings and restaurants—as a good portent for future sales.

NAM names Greenwald

WASHINGTON.—Gerald Greenwald, vice chairman of Chrysler Corp., has been elected to the board of directors of the National Assn. of Manufacturers. NAM's more than 13,000 member firms employ nearly 85 percent of the country's industrial workforce.

Total is 935,508, up 11 pct. over 1984

April registrations a 6-year high

By Jenny L. King
Detroit Reporter

Registrations of new cars were up for the fourth consecutive month in April, gaining some 9,000 units over the March sum and up 145,000 units from February.

The import segment increased to 23.05 percent this April from 22.42 percent a year earlier but was down from 23.92 percent in March.

According to figures from R.L. Polk & Co., April new-car registrations reached 935,508, best for

Table on Page 36

the month since 1979, when the total was 955,807, and up 11.81 percent from 836,717 in April, 1984.

Domestics were up 10.90 percent year to year, rising to 719,906 from 649,163. April imported-car registrations numbered 215,602, an increase of 14.95 percent from 187,554 the same month a year earlier.

For the month, Chrysler Corp. made the most significant gain, up 2.38 percentage points to 11.57 percent from 9.19 percent. Ford Motor Co. was up 0.52 percentage points, imports were up 0.63 percentage points, while General Motors plunged 3.12 percentage points and American Motors was down 0.41 percentage points.

Chevrolet was back on top in April, following a drop into second place behind Ford in March. Registrations of new domestic Chevrolets were up in number over the preceding year but Chevrolet's share of the total market slipped 1.02 percentage points, to 15.33 percent from 16.35 last year.

Ford was second with 13.46 percent of the April total, up 0.33 percentage points from 13.13 percent in 1984

Third-place Oldsmobile dropped 1.27 percentage points and slipped in actual numbers to 94,789 from 95,362. Likewise, Buick was down in numbers and penetration but retained fourth place, as Pontiac attempted to close the gap and move up from fifth place.

Pontiac penetration was up 0.80 percentage points for the month, to 7.76 percent from 6.96 percent. Buick finished the month with 8.15 percent of the total market, down 1.12 percentage points from 9.27 percent in 1984.

The three Chrysler makes, Dodge, Plymouth and Chrysler, all earned larger shares year to year as did Mercury, Lincoln and Ford.

Miscellaneous domestics, only 14 in number in April, were too few to capture a visible piece of the market but are figured into the total. A year ago, 18 miscellaneous domestics were registered in April.

Excluding imports, the April market was divided as follows: GM with 57.14 percent, Ford with 26.19 percent, Chrysler with 15.03 percent and AMC with 1.64 percent.

The April, 1984, domestic market included GM at 60.70 percent, Ford at 25.32 percent, Chrysler at 11.85 percent and AMC at 2.13 percent.

U.S. intermediates represented the largest market class in April with 26.66 percent of the total. Imports were second with 23.05 percent, followed by compacts at 21.77 percent, subcompacts at 11.68 percent, standards at 9.36 percent and luxury cars at 7.46 percent.

A year earlier, intermediates had 27.95 percent, imports earned 22.42 percent, compacts were at 18.05 percent, subcompacts had 12.47 percent, standards had 10.85 percent and luxury models earned 8.26 percent.

New-car registrations in the first four months of 1985 versus 1984 were up 6.95 percent, to 3,424,125 from 3,201,586. This year's total was 30.83 percent ahead of the same period in 1983, when 2,617,277 cars were on the books.

Domestic registrations climbed 6.41 percent from 1984, to 2,581,386 from 2,425,902. They were up 38.58 percent from 1983's 1,862,708. Import registrations were up 8.64 percent from 1984, to 842,739 from 775,684. Their share of the four-month market was up 0.38 percentage dpoints, to 24.61 percent from 24.23 percent.

Chrysler Corp. swelled to 11.65 percent of the market from 9.19 percent last year, and Ford Motor Co. was up 1.11 percentage points, to 20.27 percent from 19.16 percent. AMC was off 0.51 percentage points to 1.39 percent from 1.90 percent, and GM plummeted to 42.08 percent from 45.52 percent.

Pontiac was the only GM make to increase its share of the market year to year, edging up to 6.95 percent from 6.74 percent. Oldsmobile had the steepest decline, dropping 1.42 percentage points in the four-month period.

Dodge boasted Chrysler's greatest advance, up 1.11 percentage points, and Ford's 0.69-percentage-point gain was the best at Ford Motor Co.

Excluding imports, GM products accounted for 55.82 percent of the year-to-date total, Ford had 26.89 percent, Chrysler had 15.45 percent and AMC had 1.84 percent.

A year earlier, GM had 60.08 percent, Ford had 25.28 percent, Chrysler had 12.13 percent and AMC had 2.51 percent.

Pennsylvania dealers report manager salaries for 1984

HARRISBURG, Pa.—A survey of 1984 salaries paid by Pennsylvania automobile dealers, conducted by the Pennsylvania Automotive Assn., showed that general managers in dealerships selling more than 400 vehicles a year received an average of $62,081, while those in smaller dealerships averaged $38,571.

In its survey, the PAA sent queries to 1,300 dealers, and 358—or 27.5 percent—replied.

The survey showed that dealers in the state sold an average of 535 vehicles in 1984, with sales per outlet averaging $8,812,703. Dealers employed an average of 32.4 persons during the year.

Retirement plans for full-time employes were reported by 58.4 percent of dealers responding, health insurance plans were offered by 98.6 percent and dental plans by 13.5 percent.

The survey showed the following salary breakdown by employe and unit-sales categories: Business manager, $28,402 (over 400 units), $18,970 (400 units and under); general sales manager, $49,277 and $29,863; new-vehicle sales manager, $43,396 and $29,458; used-vehicle sales manager, $38,678 and $29,409, and truck sales manager, $33,423 and $24,895.

Other salaries were: Lease and rental manager, $30,426 and $19,740; finance and insurance manager, $32,714 and $19,035; service manager, $27,912 and , $21,450; parts manager, $26,906 and $19,190, and body shop manager, $25,776 and $18,968.

The average clerical worker received $12,234 (over 400 units), $11,231 (400 units and under); the average mechanic, $19,172 and $15,904, and the average body shop worker, $19,175 and $15,358.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma for 1984 and Oklahoma for 1985 from manufacturers' sales records.

A checklist for dealers

Factors to consider in buying equipment

An auto dealer is considering modernizing operations by purchasing an expensive new piece of equipment to replace an old but still serviceable unit in the shop or office. What factors should be considered?

When is the appropriate time to replace present equipment? Although the conventional answer is when depreciation has been absorbed and useful life is nearing an end, drastic changes within the field may make replacement necessary at an earlier date.

There are many points worth considering. Here is a checklist:

Cost of Use: Is the proposed equipment change of sufficient scope to assure a reasonable reduction in cost of operation? If so, there is a strong probability that the change would be wise.

Resale Value: Is the value of present equipment sufficiently high on the resale market to provide a reasonable amount above the remaining depreciated and useful life? A favorable figure should be weighed as an asset in favor of change.

Availability of Funds: Are funds at hand to make the replacement without cutting deeply into capital, reserve, or operating budget, which might affect other programs of the business operation?

Forced Additional Changes: Can the replacement be made without extra modification or remodeling of other units now being used? The true cost of any replacement cannot be known without this consideration.

True Cost of New Unit: What is the actual dollar cost involved in making the replacement? This should include original cost, freight, local moving costs, hiring of outside skills to make the installation, additional or new costs involved in hookups, area preparation costs, etc.

Personnel Changes: Would new features of the unit require changes in personnel because of lack of background knowledge on the part of the present staff?

Remodeling Old Equipment: Is it possible to remodel present equipment to add the new features at a low enough cost? This may be the best step to take.

Employe Morale: Will the replacement lead to changes in work that can be handled and thus generate new business and develop employe work interest?

Safety Accessories: One should also determine whether accessory safety guards and other protection existing around and attached to the present shop equipment can be transferred successfully to the new unit.

Competitive Position: Will failure to make the replacement be a detriment to the competitive position in the immediate future?

Work Output Capability: Will the new unit increase work output and boost profit margins?

Technical Soundness: Are improvements or changes in the new unit based upon sound engineering principles and practical needs, or do they contain an element of fad or novelty?

Accessories: Will present accessories be usable on the new unit, or must they also be replaced? Even if this is necessary, the change may still be worthwhile.

Versatility of Equipment: Does the new unit have the same versatility as the present equipment, or have changes limited its use?

Delivery of Equipment: Is the new equipment available for immediate delivery, or will there be a long delay?

Service Improvement: Will using the new equipment permit improvements that would be too costly, or even impossible, to adopt with the present unit?

Obsolescence of Old Unit: Determine how much danger there is of the present unit becoming obsolete. Could this lead to a reduction in profits? When such possibilities exist, it is often advisable to make changes ahead of actual need.

Equipment Testing: Has the new equipment been properly field-tested to ascertain that claims being made for it are justified?

Repair Cost: Have maintenance and repair costs for present equipment been above normal during the past year? In most cases, this is a warning of continued high maintenance expenditures.

Equipment Parts: Have the parts of the proposed new equipment been checked? Are they readily available, and are they as durable and maintenance-free as those on the present unit?

Maintenance and Tools: Are there adequate repair and maintenance tools at hand to handle the new equipment, or will it be necessary to acquire new ones?

Interest Cost If Funds Are Borrowed: Picking the right time to assume obligations—such as when interest rates are favorable—is another argument for equipment replacement if borrowed funds are being used.

Is The Time Factor Best?: On larger units, there is usually a time lag between using the old and the new equipment. At certain times of the year, this would be either advantageous or disastrous.

Korean firm to receive Toyota diesel technology

TOKYO.—Toyota Motor Corp. and Dong A Motors Corp., of South Korea, have reached a basic agreement for Toyota to supply Dong A with technology for diesel-engine vans.

Dong A plans to start production of diesel vans in late 1986 or early 1987. Dong A also has agreements with Nissan Motor Co. for the production of buses.

Trucks reach registrations peak for four months

Continued from Page 16

ments accounted for 20,304 registrations, or 1.4 percent of the industry total. They were up 40.5 percent from last year's 14,456 tally.

Class 7-8 heavy-duty trucks accounted for 71,765 registrations, or 4.8 percent of the industry total in this year's period. They were up 30.7 percent from last year's 54,-919.

Within the light-duty segment, Class 1 registrations of 957,779 were up 43.5 percent from last year's 667,284.

Class 2's tally of 418,463 was off 19.5 percent from last year's 499,-900.

And Class 3's 11,609 was off 8.3 percent from 12,573 last year.

In the medium-duty segment, Class 4's 314 total was up 62.7 percent from 193 last year.

Class 5's 2,232 registrations more than tripled the 728 units registered last year. And Class 6's 17,758 showed a 31.2 percent gain over 13,535 last year.

Within the heavy-duty segment, Class 7 registrations of 25,777 gained 39.2 percent over the 18,-522 recorded in like 1984.

And Class 8's 45,988 registrations were up 26.4 percent over 36,397 last year.

UAW named bargaining rep

WITTMANN, Ariz.—The UAW will be the bargaining representative of drivers and mechanics at the Chrysler proving grounds near this small town.

MR. DEALER, WILL YOU SPEND 15 MINUTES OF YOUR VALUABLE TIME TO LEARN HOW TO ADD $40,000, $50,000, EVEN $100,000 TO YOUR BOTTOM LINE WITH NO CAPITAL INVESTMENT.

HERE'S HOW: BROADWAY EQUIPMENT COMPANY HAS PRODUCED A 15 MINUTE FILM THAT TELLS THE AUTO BUTLER SERVICE BUILDER STORY. SIMPLY FILL IN THE COUPON BELOW AND SEND IT TO: AUTO BUTLER, INC., 1110 WEST BROADWAY, MINNEAPOLIS, MN 55411.

AUTO BUTLER WILL SEND YOU THE FILM TO VIEW AT YOUR LEISURE IN THE PRIVACY OF YOUR OWN HOME OR OFFICE. (ALL YOU NEED IS A BETA OR VHS VIDEO PLAYER). WHEN THE FILM IS RETURNED, YOU'LL BE SENT A MINIATURE MR. AUTO BUTLER DOLL AS SHOWN IN THE PHOTO. A GREAT ATTENTION GETTER AND CONVERSATION PIECE FOR ANY OFFICE OR SHOWROOM FLOOR OR A GREAT GIFT FOR A SPECIAL DAUGHTER, SON OR GRANDCHILD. (COULD BE THE NEXT CABBAGE PATCH KID). A RETAIL VALUE OF OVER $50.00. BUT THE REAL KICKER COMES FROM DISCOVERING HOW YOUR DEALERSHIP CAN BENEFIT FROM THE AUTO BUTLER SERVICE BUILDER SYSTEM.

YOU HAVE NOTHING TO LOSE AND A WHOLE LOT TO GAIN BY SENDING THE COUPON BELOW. (THE FILM STARS SUPER CAR SALESMAN JACKIE COOPER).

— Yes, I'm interested in viewing the Auto Butler film, to learn first hand how I can add big profits to my bottom line. I agree to return said film after I have used it.

PLEASE SEND BETA — VHS —

And, Yes, send me the Auto Butler Doll as shown in the photo.

Yorkville Auto buys from fleets, sells to retailers

Helping dealers find used cars

By Jenny L. King
Detroit Reporter

He takes pride in being known as a "handshake dealer in non-handshaking times."

His Yorkville Auto Wholesalers operation was established three years ago to eliminate what he calls the confusion and inefficiencies often associated with the acquisition by dealers of good late-model used cars.

Yorkville Auto owner Richard Romanus is a used-car dealer who buys cars from East Coast fleets and sells them to new- and used-car lots around the country. His operation is based in New York Mills, N.Y.

He also retails a number of cars from three family-run lots in the mid-New York State area. His wholesale and retail ventures generate 200 to 300 sales per month and prompted Romanus to purchase his own transports and move into a larger facility earlier this year.

"There has always been confusion in the wholesale market," said Romanus. "It's hard for a dealership to find the cars it needs. You have to hire someone who then must cover a lot of ground.

"Papers often aren't in order when sales are made. I wanted to develop a uniform process for sellers and buyers."

Romanus has been cultivating his sources for several years. With vehicles ranging from fleet cars from Tupperware to personal rentals from agencies like Avis, Hertz and Budget in Boston, Philadelphia, New York City and Washington, the company keeps two buyers constantly on the road.

"I also have three mechanics working for me," said the 33-year-old entrepreneur. "One's in Pennsylvania, another in outstate New York and the third is here with us. Among them, they check every car we handle before we make a sale. We guarantee all engines, transmissions and frames."

Yorkville Auto has delivered cars to customers as far away as Texas, Minnesota, Illinois and California. Sixty percent are shipped direct from the company's sources, with the remaining 40 percent coming from headquarters in New York Mills.

To his surprise, Romanus said, the company has been hauling 70 percent of its sales with its own transports or through arrangements it makes with hauling companies.

Romanus comes by his auto interests and talents honestly: His father is a 45-year used-car-sales veteran and his brother has been in the business 20 years. Each runs a Yorkville Auto retail lot with Romanus operating the third one, adjacent to headquarters.

"At the end of last year, there were three of us here," he said from his office in New York Mills. "Today, we have a staff of 11 and I'm a long way from being finished."

Romanus advises customers of what's available by means of a monthly newsletter that lists cars coming out of fleet service. Beside dealers, he sells to businesses that include taxi companies and exporters.

The demand for late-model used cars is insatiable, he said. He hopes to increase his mailing list to include 1,000 names by the end of the summer, he added.

A new contract with two Thrifty Rent-A-Car companies provides Yorkville Auto with a customer now, a source in September. Romanus reported the sale of more than 200 former fleet cars to Thrifty with the understanding that he would buy them back at the end of summer at a cost minus depreciation.

"This will give me a feel for what will sell in the fall," he said.

Cars he retails have National Target warranties covering powertrain, towing expenses and rental costs in case of downtime for repairs.

Another new business idea he hopes to implement soon is a small rental operation that will provide insurance companies with replacement cars for customers whose vehicles have been totaled in accidents.

Petty named to head NHTSA public affairs

WASHINGTON.—Judy Petty, a former Arkansas state legislator, has been named director of NHTSA's office of public and consumer affairs. She has also been a newspaper columnist and a radio commentator.

Petty was chairman of the Arkansas Governor's Task Force on Drunk Driving and sponsor of the state's omnibus drunk-driving bill. She has also served on the board of directors of the National Assn. of Women Highway Safety Leaders.

Marketing & Media

Continued from Page 17

The group and ad agency Solemene & Associates developed the new theme to replace the old "Ford, a Texas Tradition" slogan. About 160 dealers in Northern and Panhandle Texas will use the theme.

Personnel stuff

The Automotive Information Council (AIC) has appointed **Charles F. Charpie** president and director of communications. Charpie is a veteran automotive publicist, with more than 30 years' experience.

McCann-Erikson has made several personnel moves of note.

Helen Seligman has been promoted to associate media director with planning responsibilities on the Buick and General Motors Overseas Distribution Corp. accounts. Seligman had been senior media planner.

Charles Van Becelaere is now assistant media planner. He had been a media buyer.

Deborah Fadool is now assistant media planner for Buick and Kelsey-Hayes. Fadool had been a media buyer.

Andrea Vaughn has been promoted from media estimator to media buyer on GMODC.

Susan Vircik is now a senior media estimator on the Buick account.

BBDO-Detroit has promoted **Bill Oswald** to group management supervisor for the Dodge car and truck accounts, as well as the production/traffic operations group.

Harry Grusche succeeds Oswald as management supervisor on Dodge car advertising.

Belts for school buses

ST. LOUIS.—The Wentzville (Mo.) School District has ordered seven 65-passenger buses with factory-installed seat belts at a total cost of $203,515.

FLORIDA

THE FLORIDA AUTO AUCTION OF ORLANDO INVITES YOU TO BE OUR GUEST

TUESDAY, JULY 2nd, 10:00 A.M.

A SPECIAL CONSIGNMENT of FLORIDA DAILY RENTAL VEHICLES

W/"TRANSPORTATION ASSISTANCE"
OVER 800 — 1985 MODELS
ALL DEALERS ARE WELCOME

From $50.00 to $250.00 will be paid on each purchase from this special group on sale day. Payments are based on the distance between the buying dealer and the auction. Only purchases from this special consignment will receive bonus.

*—Manufacturers' sales records used for compiling Oklahoma in 1985 and New Yorkand Oklahoma in 1984.

#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are Chevy Van, El Camino and Blazer; Dodge, compact trucks; Ford, Econoline and Bronco; GMC, Vandura and Jimmy. ◦—Miscellaneous includes imports, FWD, narrchdoors, Oshkosh, etc. —Compiled from R. L. Polk & Co. data

Inventory climbs to 297,000 cars, a 27-month high

Japanese boost import stockpile

Continued from Page 1

ers clearly were stockpiling in anticipation of better sales to come.

By country of origin, the car inventory was split this way on June 1: Japan, 53.79 percent; Germany, 33.32 percent, and other European countries, 12.89 percent.

One month ago the split was Japan, 49.22 percent; German, 36.77 percent, and other Europeans, 14.01 percent.

There was a 20-day supply of Japanese cars on June 1. That's still uncomfortably low, and lower than last month's 23-day supply when Japanese cars were selling more slowly because there were fewer to sell.

The German June 1 days-supply figure was 59 days, well within the ideal range, compared with 70 days, also a comfortable import figure, on May 1. Stocks of other European makes were similarly well situated on June 1 and May 1: 46 and 55 days, respectively.

Chevrolet's Isuzu-built Spectrum, which had been overstocked and selling slowly, raised its sales rate last month, trimming its inventory from 103 days on May 1 to 85 days. The hot-selling Chevy Sprint, built by Suzuki, was selling faster, but Chevy stockpiled them even faster; Sprint's days-supply level rose from 41 to 66.

Chrysler Corp.'s largest-volume Mitsubishi-built cars saw big jumps in days-supply levels, but those, too, were due to stockpiling; their sales rates rose last month.

Plymouth Colt's days-supply figure rose from 48 days to 80; Dodge Colt's, from 48 to 76. On the other hand, Chrysler inventories of Conquests stayed steady while sales rose, trimming days' supplies of the Plymouth Conquest from 123 days to 77 and of the Dodge Conquest from 128 days to 78.

Audi trimmed its days-supply figure mostly by increasing its sales. BMW's jump from 65 days to 87 days was due to an increase in shipments; sales rose during the month. Merkur, the new German-assembled Ford Motor Co. car, remained overstocked as sales held steady. German Volkswagens took a big sales jump, trimming the days-supply figure from 78 to 51.

Alfa Romeo's decreased days-supply figure can be attributed to a slight sales increase. Peugeot increased its sales and increased its shipments even more, raising its days' supply from 71 to 85.

Renault was one of the few importers to increase its days-supply number by decreasing its selling rate: Not good, since its stockpile rose from an already bloated 192 days to 262. Those numbers apply only to its imported models.

The only big change among truck stocks was a big jump by Mitsubishi from 17 days to a more-normal 41. Sales were down during the month, but that was probably because there weren't enough trucks to sell when the supply fell to 17 days.

Japanese cars and their June 1 days' supplies: Honda imports, 7; Toyota, 9; Mazda, 20; Subaru, 22; Nissan, 28; Mitsubishi 28; Chrysler, 75; Chevrolet, 80, and Isuzu, 82.

The Chrysler captive imports included Dodge Vista, 66; Plymouth Vista, 72; Dodge Colt, 76; Plymouth Conquest, 77; Dodge Conquest, 78, and Plymouth Colt, 80. As noted, the Chevrolet captives were Sprint, 66, and Spectrum, 85.

German models and their days' supplies: Mercedes-Benz, 35; VW imports, 51; Porsche, 56; Audi, 70; BMW, 87, and Merkur, 128.

Models from other countries: Jaguar, 23; Alfa Romeo, 26; Volvo, 46; Saab, 50; Peugeot, 85, and Renault, 261.

Truck makers and their days-supplies were: Mazda, 19; Toyota, 23; Nissan, 34; Mitsubishi, 41; Chrysler, 46, and Isuzu, 62.

NHTSA upgrades investigation of Nissan Z-cars

Continued from Page 3

trunk lids falling on people were few and generally involved "minor injury" such as a bumped head, bruises and minor cuts. The spokesperson said that people usually have forewarning as to when the lid is going to fall.

In the matter of horns allegedly not working, particularly in cold weather, NHTSA said it knew of no accidents stemming from that alleged defect and that the horns would work in cold weather provided they were pushed hard enough.

The Center for Auto Safety blasted that reasoning. It asked, "How badly do people have to get hurt to convince NHTSA that an acknowledged defect is safety-related?"

The CAS continued, "The recall laws do not distinguish between disabling and lesser injuries. Clearly, a 50-pound lid suddenly falling on your head represents a threat to anyone's safety, particularly senior citizens who own most of the cars in question."

A GM spokesman said the company had produced approximately 4.3 million large cars and about 2 million X-cars that might have been afflicted with the alleged problems. He added that the company agreed with the NHTSA assessment.

GM sent service bulletins to its dealers concerning both the horn and lid and hatch problems in 1984.

Cadillac for nine passengers

This front-wheel-drive Cadillac six-door, nine-passenger limousine comes from American Custom Coachworks, Ltd., with a suggested retail price of $34,900. The firm is in Beverly Hills, Calif.

Chevrolet Nova a winner; intro excellent, dealers say

Continued from Page 1

buyers," Johnson said.

E.A. Bush, Bush Chevrolet, Tiffin, O., said his dealership already had written two sold orders with imports as tradeins.

"We took two Volkswagens (Rabbits) in trade," Bush said. "I'm very happy with the way things are going. We've had a definite increase in floor traffic."

In the depressed steel country around Lowell, Ind., there was less action.

"It's looks favorable, and I'm sure it will take off," said Dean Henry of Snell Chevrolet.

"But we haven't had the turnout we'd expected."

Henry said his dealership had only one Nova in stock and had written only one sold order. "Once the word gets around, things will pick up," he said.

Nick Stanulis, sales manager for Weber Chevrolet, St. Louis, said Nova accounted for one-third of the dealership's sales on the introductory weekend and that prices were in the $9,000-plus range.

In the prime import market of Ann Arbor, a near-Detroit city that is home of the University of Michigan, Rampy Chevrolet sold five of the eight cars it had in stock within the first few days.

"I feel very good about the Nova," said dealer Jeff Rampanelli.

Rampanelli, who also sells Nissan, said his Saturday showroom traffic was outstanding.

"This is a very strong import market and we're going to do very well with the Nova," he said.

The whole question of how well the Nova will fare against Japanese makes remains unanswered, although dealers already are forming opinions.

Gregg Foster, sales manager at Bob McEnerney Chevrolet, Sedalia, Mo., said he is going to pitch the car head-to-head against the imports.

"There's no doubt about it, we're going to get some of Toyota's business," Foster said. "The fact that this car is part Chevrolet and part Toyota will be very important."

Another dealer in Sedalia had a little different opinion, however. General Sales Manager Bob Pressler, of Town & Country Motors, which sells Toyota among other makes, disagreed.

"I don't think it's going to affect the Toyota business," Pressler said. "This is a rural community and it could take a year or so for the Nova to be established. So far, they haven't hurt me."

While that question remains unanswered, it was clear that Chevrolet dealers expect big things from Nova, including some of the perceived benefits of imported makes.

"We're looking for profits," said John Wells, general manager at Payton Wells Chevrolet, Indianapolis.

"This is the best little car Chevy's had in some time," he said. "We deserve full sticker, just like the imports."

Daihatsu to offer minicar in U.S. market in 1987

Continued from Page 1

inches long and 61.0 inches wide. It is offered in Japan in both two-door and four-door hatchback versions. Like the Suzuki Sprint sold in the U.S., it is powered by a three-cylinder engine. Gasoline versions of the 993-cc engine range from 55 HP to a turbocharged 80-HP unit. Three-cylinder diesels are rated at 38 HP and, with turbo, 50 HP.

The Italian minicar Innocenti has been powered by Daihatsu's three-cylinder engines for several years. Innocentis have been sold in Canada for about a year, but the engines do not meet U.S. emission standards.

Daihatsu did not indicate which power plant or body style would be brought to the U.S.

Charade is an inch shorter than the Chevy/Suzuki Sprint, which also is powered by a 1.0-liter engine. Sprint has proved a runaway sales success—limited severely by quotas—on the West Coast and is scheduled to be introduced in the rest of the U.S. this year.

Comparing Charade to Chevrolet Chevette, the Daihatsu comes in about 21 inches shorter and about 600 pounds lighter.

Daihatsu sells a Cuore hatchback series 13 inches shorter than Charade. The cars are powered by two-cylinder engines. Above Charade are the Charmant sedans with four-cylinder engines and an overall length of 164 inches—about the same as Chevette.

Daihatsu sold 412,139 vehicles in 1984, an increase of 12.4 percent over 1983. Its export sales rose 6.6 percent to 140,633 units last year.

In effort to reduce break-even point

Renault to trim output, workforce

Continued from Page 3

Project car was to be made. Investment has been completed in Vilvorde to allow the plant to make a car model larger than the R9-R11, the Alliance-Encore's European sisters.

Regarding AMC-Renault's model lineup in the U.S., the French company is to kill the Fuego coupe this month.

Besse also plans to restructure the company's dealer network in France. This network consists of more than 600 main dealerships and some 10,000 service and selling points, many of them very small. The market in France is about 1.7 million cars, of which Renault holds a 31 percent share. For two years, many dealers have been in trouble.

Renault also will restructure its supplier network to seek cost and quality improvements and will buy components abroad when it will provide any advantage. Inventories will be cut as will all "unnecessary" spending.

The French state-owned company will cut the Car Division's workforce in France to 77,000 by the end of 1986, down 21,00 or 21 percent from the level at the end of 1984. The plan involves 12,000 departures this year and 9,000 next year.

All the redundancies should be of the "soft" kind, including early retirements at 55, voluntary return to their native countries for immigrant workers and other voluntary departures linked with paid retraining programs and financial incentives.

The plan is essentially similar to that proposed by Hanon last October, except that Hanon did not specify the total number of departures he wanted and his proposals were more sympathetic to the workers. At that time, the unions refused the idea.

This time, most of them accepted the Besse plan as long as it doesn't involve any firings.

It is not known how many of the jobs to be cut are white-collar, but it is known that the reduction percentage to be achieved among the "indirect work force" will be higher than among the shop-floor personnel.

During the board meeting, Renault announced some structural changes in its organization.

Taking a big quality problem into account, Besse created a new job of "general inspector for quality" and gave it to Pierre Tiberghien. A chief of R&D a few years ago, Tiberghien had been appointed to head the Car Division by Hanon at the end of 1982. Two years later, Hanon replaced him with Pierre Semerena.

Two months later, Hanon himself was dismissed by the French Administration in favor of Besse, who recently took the reins of the Car Division from Semerena.

Management of the North American market will be incorporated in the general marketing department, under the direction of Jean Phelupt. The North American territory was previously a special operation, under the management of Michel Leclere-Bessonnet.

That organization dated back to the days when Renault was in the early stages of its negotiations with AMC. Now that AMC handles the whole North American car business for Renault, the separate structure is no longer needed.

Automotive Industries undergoes shakeup

DETROIT.—Chilton Co.'s Automotive Industries magazine has a new editor and will move its editorial offices to Detroit from Pennsylvania, the company said.

John McElroy, previously Detroit editor, has been named editor-in-chief, replacing Ira G. Black, who has left the company. McElroy said the editorial staff will gradually be moved from Chilton headquarters in Radnor, Pa., to Detroit. The publication already has sales representation in Detroit.

Chilton is owned by American Broadcasting Cos. Inc., which in turn was recently acquired by Capital Cities Communications.

Poling named to board

NEW YORK.—The Committee for Economic Development, a national organization of business and academic leaders, has elected Harold A. (Red) Poling, Ford Motor Co. president, to its board of trustees.

With more Saturday overtime

Week's build rebounds to 171,436

By Louise Kertesz
Detroit Reporter

Domestic makers estimated production of 171,436 cars last week, 4.39 percent more than the previous week's 164,228 and 8.61 percent more than the year-ago week's 157,850.

So far this year, 4,235,521 cars have been assembled, 3.20 percent more than the 4,104,201 finished last year at this point.

Last week's estimated production was shared as follows: General Motors, 57.52 percent; Ford Motor Co., 19.16 percent; Chrysler Corp., 18.78 percent; Honda of America Mfg. Co., 1.84 percent; Volkswagen of America, 1.10 percent; New United Motor Mfg. Co., 0.85 percent, and Nissan Motor Mfg. Co., U.S.A., 0.75 percent.

American Motors' Kenosha facility is closed this week (June 24) for the second of two weeks' vacation. It will also be closed the week of July 1, with the four working days that week tagged for inventory adjustment. It is scheduled to reopen July 8.

GM scheduled two overtime shifts Saturday (June 22) at the following plants: Pontiac (G-Line); Detroit; Arlington, Tex.; Fairfax, Kans.; Lakewood, O.; Janesville, Wis.; Leeds, Mo., and Lordstown, O.

Chrysler slated its Belvidere (Ill.), St. Louis (Nos. 1 and 2) and Jefferson (Detroit) plants for two overtime shifts Saturday.

This week, the Belvidere and St. Louis plants are scheduled to operate two nine-hour daily shifts, and the Jefferson plant is slated for two 8½-hour daily shifts.

Ford has scheduled daily overtime this week at its plants in Lorain, O.; Dearborn; Edison, N.J.; Wayne, Mich.; Wixom, Mich., and Kansas City.

New Jersey dealers to ask state to ban 2-tier pricing

By John A. Russell
New York Staff Writer

TRENTON, N.J.—The New Jersey Automobile Dealers Assn. voted last week to seek state legislation on fleet subsidies, including a prohibition against two-tier pricing.

The board of trustees of the association, by a vote of 49 to 0, made the move in reaction to the NADA position that it would drop its fight against two-tier pricing and seek a compromise on this issue in Congress. NADA directors voted to pursue federal legislation that also would prohibit state actions on this issue.

Charles Walton, president of the New Jersey association, said the NJADA board "voted to seek Oklahoma-type legislation in the state."

Oklahoma legislation caused a furor in that state two years ago, and General Motors' successfully lobbied to kill the bill. It would have required that dealers be sold cars at prices no higher than those given any other party in any state.

This legislation would have barred manufacturers from offering their cars to fleets for less than dealer costs.

Walton said the NJADA trustees were reacting to the NADA board's proposed six-point "platform for negoiations" with federal legislators.

Walton said his association hopes other state dealer groups take the same position and move for state legislation. The NJADA will act as a clearinghouse for information as well as coordinate the effort, he said.

The NJADA believes the fleet subsidy should be reckoned with on the federal level, he said. it made its move for state legislation out of "fear and concern" on the preemption issue, he said.

"They (trustees) don't feel we can sit and wait on NADA," Walton said.

NADA Executive Vice President Frank McCarthy has stated previously that the issue of preemption must be embodied in any federal legislation.

According to Walton, NJADA would have sought Oklahoma-style legislation in this state one or two months ago, but it was waiting for NADA to reach a conclusion.

Four more states enact seat-belt laws

DETROIT.—Governors of four more states have signed seat-belt-use laws—Oklahoma, Nebraska, Hawaii and Texas, bringing to 12 the number of states that have such laws.

The others are New York, New Jersey, Illinois, Michigan, New Mexico, Missouri, Indiana and North Carolina.

Truck production climbs 1.62 pct.; 75,960 assembled

U.S. manufacturers planned to build 75,960 trucks last week, 1.62 percent more than the previous week's 74,751 and 13.65 percent more than the year-ago week's 66,834.

Year-to-date, 1,712,460 trucks have been completed, 10.18 percent more than the 1,554,283 assembled last year at this time.

Ford Motor Co.'s Norfolk plant is down this week (June 24) to improve its paint and assembly facilities.

Ford's Twin Cities plant is also down this week, to retool for the launch of the 1986-model F-Series. The plant is also retooling to produce the 1986 Ford Ranger, which has never been built at the plant before.

The two plants will be down a total of three weeks, since all Ford plants will be closed for vacation the first two weeks of July.

Ford has scheduled daily overtime this week at its plants in Wayne, Mich.; Kansas City; Lorain, O., and Louisville.

General Motors scheduled two overtime shifts Saturday (June 22) at its Flint (No. 2) and Pontiac (No. 2) plants.

Chrysler Corp. has scheduled two nine-hour daily shifts this week at its Warren (Mich.) plant.

Gaining on '84, Canadian cars top 500,000

Year-to-date Canadian car production passed the 500,000 mark Monday, June 17, 12 days behind 1984.

With the makers continuing to schedule weekly builds at the highest levels in over two years, the production lag behind 1984 has now dropped below 8 percent, from a peak of 15.21 percent during the week ended April 13.

So far this year, 523,316 cars have been assembled, 7.70 percent behind the 566,983 completed last year at this point.

The manufacturers targeted assembly of 26,230 cars last week, 4.70 percent more than the previous week's 25,052. Last week's estimate topped the 25,809 total for the week ended June 8, which was the best weekly production since the week ended May 14, 1983, when 27,994 cars were built.

Last week's scheduled production was about the same as (up 0.75 percent) the year-ago week's 26,034.

Volvo's Halifax (N.S.) plant lost production of about 200 cars during the week ended June 15, due to a parts shortage.

Truck makers expected to build 19,793 units last week, 3.82 percent more than the previous week's 19,065 and 4.99 percent more than the year-ago week's 18,853.

Year-to-date, 446,079 trucks have been assembled, 6.68 percent more than the 418,156 completed last year at this time.

Makers get CAFE break as EPA alters test rules

By Jake Kelderman
Washington Reporter

WASHINGTON.—EPA announced its long-awaited CAFE adjustment numbers last week and, to the surprise of many, the agency was generous beyond expectations.

What had been expected was a reluctant giveback of one-tenth or two-tenths of a mile per gallon for fuel-economy losses incurred because of changes the agency made in its fuel-economy test procedures over the years. Instead, the grant turned out to be four-tenths to eight-tenths of a mile per gallon per manufacturer per year.

There also was relief for some makers from penalties they were facing for failing to meet CAFE standards for 1985.

For General Motors and Ford Motor Co., the CAFE recovery for model years 1980 through 1984 was a substantial 2.7 MPG for each, leaving both makers with positive CAFE credit balances going into the 1985 model year.

GM and Ford will save an estimated $400 million combined in fines they otherwise would have had to pay.

Utilizing the three-year carryback provision of the CAFE law, GM now enters the 1985 model year with a 0.9-MPG CAFE credit. Previously, it was looking at a negative 1.8-MPG figure and hoping for improvements in its CAFE over the next three years to offset that deficit.

Ford goes into the 1985 model year with a credit of 3.5 MPG instead of a credit of 0.8 MPG, according to EPA numbers.

Each tenth of a MPG is worth $5 per vehicle times the maker's total passenger-car production for the model year. If a maker misses the CAFE, it is assessed a penalty of that amount. If it exceeds the CAFE standard, it builds up a credit to use in future years in which it may miss the standard.

• EPA had been under a court order to look into the extent, if any, of fuel-economy losses created by changes it has made in its test procedures since 1979.

GM and Ford and some of the import companies have been lobbying Congress and NHTSA this year to lower the CAFE standard for 1986 and future years from 27.5 MPG to 26 MPG on the grounds that consumer demand for large cars has limited their ability to meet CAFE requirements and that, as a consequence, they would be subject to millions of dollars in fines.

The EPA adjustments largely negate the fines some companies were subject to.

For example, Volvo moved from being 0.2 MPG under the 26-MPG CAFE standard for 1983 to being 0.5 MPG over the standard, and Saab jumped from being 0.1 MPG under to 0.6 MPG over the standard.

For 1984, Volvo went from 0.6 MPG under the 27-MPG standard to being equal to it, and Saab went from 1.7 MPG under it to just 1 MPG under it.

For a company like Volvo, one-tenth of a MPG CAFE credit is estimated to be worth $10 million because of the product mix changes it permits.

Over the years, EPA has made seven changes in its fuel-economy test procedures, revising methods which it decided had a negative effect on fuel economy. The changes involved distance measurement, inertia weight categories, dynamometer controllers, laboratory humidity, exhaust gas samplers, test fuel properties and energy-efficient oils.

Of the seven, inertia weight, fuel properties and slippery oils have been the biggest factors, EPA

NUMMI Novas headed for Toyota dealers?

By Francis J. Gawronski and Matt DeLorenzo
Automotive News Staff

Toyota Motor Corp. may be getting ready to assemble cars in the U.S. for sale through its own dealer network in a roundabout way: By using excess production capacity at the Toyota-General Motors joint-venture plant in Fremont, Calif.

According to Nihon Keiza, a Japanese business publication, the Toyota-branded vehicles will be based on the Corolla model and assembled by New United Motor Mfg., Inc. (NUMMI), starting this autumn with an annual production of 50,000 units.

The newspaper pointed out that the FTC consent agreement signed by General Motors and Toyota limited NUMMI's annual production to 250,000 units. Toyota agreed to supply GM with 200,000 of the Corolla-based Chevrolet Novas from NUMMI. The extra capacity will be used to build cars for Toyota's U.S. dealers, according to the report.

While there are indications the numbers may be wrong, the gist of the reported plan may have some validity, according to sources.

Toyota's decision to launch U.S. production for its dealers is said to have been prompted by the extension of voluntary quotas.

Toyota Motor Corp. in Japan would neither confirm nor deny the report.

In the U.S., Toyota Motor Sales, U.S.A., said it could neither con-

Isuzu to set up California tech center

TOKYO.—Isuzu Motors, Ltd., announced it will establish a technical center in Los Angeles to design and develop cars and trucks. Isuzu Technical Center of America, capitalized at $300,000, will handle design planning, vehicle testing and research. The facility is scheduled to be completed by the end of 1987.

Mazda U.S. plant to make parts

TOKYO.—Mazda Motor Corp. reportedly will produce at its assembly plant in Flat Rock, Mich., certain components for the new car that will be built there beginning in the fall of 1987. Although the company would not confirm the report nor reveal the exact number and kind of parts to be built in the U.S., it is believed that Mazda Motor Mfg. U.S.A. Corp. is planning to make about 20 percent of the components for the car in order to reduce transportation costs from Japan.

4x4 is first; cars due for '88 model year

Suzuki to begin U.S. sales Nov. 1

By Matt DeLorenzo
Los Angeles Reporter

BREA, Calif.—Suzuki will begin selling its 4x4 sport/utility vehicles Nov. 1 in California and Florida through 36 dealers, company officials told Automotive News last week.

The entry of the SJ413, which is sold as the Samurai in Canada, will lay the groundwork for the addition of Suzuki's car line in the 1988 model year, according to Doug Mazza, national marketing manager for Suzuki of America Motor Corp.

Distribution of these vehicles will be handled by Suzuki of America Motor Corp., which was incorporated on June 12. President of the new firm is T. Arai. Mazza, who came to Suzuki six weeks ago from Mitisubishi, is joined by Bill Charles, national service manager and formerly with Honda, and T. Ohwata, national service director.

The fledgling organization has two regional managers—John Dorsey, who will cover California, and Dave Haynes, who will be based at Suzuki's Miami regional headquarters.

Mazza projected sales of 6,800 units from November to next March. The SJ413, which has yet to be named for the U.S., will carry a base price between $5,000 and $6,000.

The 4x4 vehicles will be imported under a Category II allotment given Suzuki. Category II is separate from automobiles under the Voluntary Restraint Agreement. Mazza said some vehicles will be brought in under Category II and some will be imported in a truck configuration.

• California is a logical choice for Suzuki, since it is the headquarters of its motorcycle company.

One reason why Florida was chosen is that some of the vehicles have been imported to that area from Puerto Rico. Mazza said those imports have stopped, but "the owners require the support of the distributor and the factory." As a result, 14 dealers will be signed in Florida and one in Atlanta.

"With those two markets, we feel we can be in 20.7 percent of

GM may buy engines from Renault Mexico

By Jean-Jacques Renaux
Special Correspondent

PARIS.—Renault confirmed that it is negotiating with General Motors about supplying GM's U.S. group with engines from Renault's new plant in Mexico.

Renault last week also signed a letter of intent with Allied Corp. that would give the U.S. company full ownership of Renix, a joint-venture company that produces automotive electronic systems. Renix was formed by Renault and Bendix, now part of Allied, in 1978.

Renault also announced it will restructure its agricultural equipment unit in France to make it a better candidate for sale. Those moves are part of the strategy to stem losses, announced early last month by Georges Besse, Renault's new chief.

Renault spent $400 million to set up its Gomex Palacio engine plant in Mexico, near the U.S. border. The plant belongs to Rimex, a fully owned subsidiary of the French group. It was designed and tooled to produce the same engines as Renault makes in Cleon, France: A modern four-cylinder iron block with displacement of 1.6 to 2.0 liters.

Maximum capacity will be around 1,300 units a day for the plant that started production at the end of last year.

Initially, Renault intended to supply those engines to American Motors and to export part of production to Europe. But now that both AMC in the U.S. and Renault in France are confronted with substantial sales declines, the Mexican project faces a substantial overcapacity problem, to such an extent that Renault is said to have considered closing the plant altogether.

According to the French company, GM and Renault have

Avanti files for Chapter 11; firm plans move to Detroit

By Edward Lapham
Marketing Editor

Avanti Motor Corp. last week took the first giant step in a reorganization plan that could ultimately total $10 million and relocate the company's manufacturing and assembly operations in Detroit.

As the first step in the plan, Avanti filed for protection from its creditors under Chapter 11 of the U.S. Bankruptcy Code.

The petition was filed in South Bend, and the company was granted debtor-in-possession status, which means it will manage its own affairs during the reorganization.

Avanti's attorney, Robert Weiss, of the Detroit firm Honigman Miller Schwartz & Cohn, said the car maker "will continue to build and sell cars" during the reorganization.

"This will give us some breathing room to put the whole plan together," said Avanti owner Stephen H. Blake.

Although there are several elements to the plan, which includes participation by the City of Detroit and the State of Michigan, it is fairly simple.

According to Blake, the main elements are:

1. A new equity capital infusion of $1.5 million to $2.0 million by an investor group that includes some of the current minority shareholders.

2. City and state working capital and capital asset loans totaling $5 million to $6 million, which would include the purchase price of a Detroit factory.

Blake is most interested in an idle Massey-Ferguson tractor plant on the city's west side, but the $2.6 million asking price may be too steep. A $1.5 million Burroughs plant already "has been ruled out," Blake said.

The city's portion of the loans is likely to be raised by an industrial revenue bond issue and federal Urban Development Action Grants.

3. A $2 million line of revolving credit, with perhaps an initial draw-down of $1 million.

Blake said he already has a "letter of interest" from a Detroit bank, but declined to disclose the name of the bank.

However, Automotive News has learned that NDB Business Finance Corp.is the interested institution.

NDBBFC is the "high-risk, high-return" subsidiary of NBD Bancorp, also corporate parent of the National Bank of Detroit.

Both the new equity investment and bank line of assest-based credit are contingent on the city and state portions.

"I need about 90 days to finish putting this thing together," Blake said. "But I'm confident we can do it because the city and state people have been very, very helpful."

Blake said he hopes to accomplish the move to Detroit this autumn. He said total downtime for the change would probably be 90 to 120 days.

The move to Detroit will be more than just a physical change, Blake said. The Avanti II coupe, lineal descendant of the old Studebaker model and still essentially hand-made except for the General Motors powertrain, will be discontinued before the move.

"The final 10 or 20 models built in South Bend will be special editions," Blake said.

The company will continue to build the convertible and plans to introduce new models. A shorter, wider coupe and a roadster are under development, Blake said.

"We're still going to have a hand-built car," he said, "But some automation is not out of the question."

Currently, there are 24 cars in the assembly process—10 convertibles and 14 coupes.

Current employement at the plant is "about 50," Blake said, compared with a high of 140 in 1984. About half of the current employes are expected to move to Detroit.

Initial employment at the Detroit plant is expected to be 100 for a first full-year output of about 250 vehicles. If and when output reaches 400 to 500 units "in a couple of years," employment could reach 200.

"About half" of Avanti's 25 dealers are among the identifiable 568 unsecured creditors, Blake said. "The other half are debtors."

General Motors, which is owed about $250,000, is the largest unsecured trade creditor.

"The people at GM have been unbelievably cooperative and helpful," Blake said.

First Source Bank, Avanti's South Bend lender, is listed as an as-yet uncontested secured creditor.

When Blake and his investor group bought the company, the

Regulations vary by engine size

European emissions standards set

By Jean-Jacques Renaux
Special Correspondent

LUXEMBOURG.—At the end of a 20-hour meeting here, the European Economic Community's 10 Ministers for the Environment agreed upon stricter car exhaust emission standards to be implemented throughout the EEC.

Germany, which called for the most severe standard regarding oxides of nitrogen (NOx), compromised slightly, allowing more flexibility in the technical solutions to be used by the industry.

For medium-sized cars with engine displacement between 1.4 and 2 liters, there will be no specific NOx standard. Instead there will be a global hydrocarbon (HC) plus NOx standard amounting to some 3.1 grams per mile, measured in the European test procedure.

But the U.S. certification, according to U.S. 1983 exhaust emission standards, will reportedly be accepted in Europe, at least until the end of 1987.

The new European standards will be implemented under a timetable that begins in October, 1988, but Germany is allowed to prompt the market with tax incentives, starting immediately.

The agreement involves three categories for gasoline-engine cars, with the following exhaust emission standards:

1. For cars with engine displacement of more than 2 liters: Carbon monoxide (CO), 25 grams per test (9.9 gpm); hydrocarbons 6.5 grams (2.6 gpm), and NOx, 3.5 grams (1.4 gpm).

2. For cars with engine displacement of between 1.4 and 2 liters: CO, 30 grams (11.9 gpm); HC NOx, 8 grams (3.1 gpm); no separate NOx standard.

3. For cars with engines smaller than than 1.4 liters: CO, 45 grams (17.9 gpm; HC . NOx, 15 grams (gpm), and NOx alone, 6 grams (2.4 gpm).

According to early estimates from the industry, those standards might call for the three-way catalytic converter for engines above 1.7-liter displacement.

The agreement ended months of uncertainty for the industry, chiefly in Germany where some 450,000 car purchases were postponed in the wake of the new regulation and tax incentives, according to the Manufacturers Assn.

Yet the Luxembourg agreement can hardly be described as pleasing for many European states and for many car manufacturers.

Tension built up among governmental and industry circles during the last three weeks as many parties disapproved of the proposals made by the European Commission in charge of the matter.

The row focused mainly on the NOx emission level. The commission's proposals were considered too lax by the German environmentalists, while the U.K. and France, supported by the industry, led the opposition.

The commission's assignment was to produce some standards that would be in line with those implemented in the U.S. in terms of their end effect on the environment, while hopefully allowing the manufacturers to comply by means other than the three-way catalytic converter.

That goal had been approved by the ministers three months ago in the hope that the catalyst could be avoided for cars with an engine displacement smaller than 2 liters.

There was previously no NOx emission control in Europe, but tests indicate that current European cars emit between 3 and 12 grams NOx (1.3 to 4.6 gpm) almost irrespective of engine displacement.

The industry argued that a higher NOx emission standard (i.e. 5 grams per test or 2 gpm) could be achieved without a catalytic converter, and that such a standard could prove more effective in the end, taking into account the high failure rate of catalytic converters rate quoted by the EPA in the U.S.

Such a standard could also open the door for lean-burn-engine development, a technique regarded as potentially more reliable and less expensive.

Chrysler to purchase Hutton's credit firm

Chrysler Corp. and E. F.Hutton Group, Inc., last week announced an agreement in principle for Chrysler Financial Corp. to acquire the common stock of E. F. Hutton Credit Corp. in a deal that could amount to $147 million.

Chrysler said it would pay $125 million initially. Depending on final resolution of certain tax credits held by the parent company but relating to the credit business, Chrysler could pay an additional $22 million.

E.F. Hutton Credit Corp., headquartered in Greenwich, Conn., is a diversified equipment finance company engaged in commercial lending and leasing nationally. Gross finance receivables and operating leases amounted to $1 billion as of March 31, 1985. It has 28 offices throughout the U.S.

The purchase is Chrysler's second move in the financial services area in recent months. At its annual meeting in May, Chrysler announced a joint venture between Chrysler Financial and General Electric Credit Corp. to make equity investments in machinery, equipment and real estate.

E. F. Hutton Group acquired the credit company from International Paper Co. in 1981, when the credit firm's portfolio amounted to $583 million. Its portfolio has doubled in four years.

E. F. Hutton executives said they decided to sell the credit business because its growth has exceeded expectations, and the parent company was not able to fully use its tax benefits.

Bosch shortages force VWoA to close plant

By Louise Kertesz
Detroit Reporter

Volkswagen of America's Westmoreland (Pa.) plant is closed this week and next because of a shortage of Bosch fuel-injection-system components. The plant is scheduled to resume production July 15, according to a VWoA spokesman.

The shortage, which had been building for several months, is due to a change in emissions standards in Germany that caused an unexpected demand for components used by VWoA, the spokesman said. "It's a question of robbing Peter to pay Paul," he said.

Automotive News contacted European auto makers using Bosch components and learned that they were as yet unaffected by the supply problem.

Volvo and Saab-Scania, whose plants are on summer vacation, reported no problem.

A spokesman for Saab-Scania of America said that Saab and VWoA, though both supplied by Bosch, don't share any common parts and that Saab engineers were unaware of any supply problem.

An Audi spokesman in the U.S. said that the shortage should have no effect on that company.

A BMW spokesman in Europe said the company was aware of the shortage but expected no problems.

Daimler-Benz, whichhad also heard of the supply problem, said it wasn't affected.

Joseph V. Borruso, vice president-automotive sales and engineering for Robert Bosch Corp., said that the shortage involves "a tooling capacity problem unique to Volkswagen," and that it is the company's German operation that requires more of the components in question.

The problem "absolutely does not involve" any other U.S. auto maker, Borruso said.

Though some European makers use similar Bosch mixture control units, the tooling is different from that used by Volkswagen and thus the shortage would not affect them, he said.

Forget everything you know about Extended Service Contracts.

Now there's The Advantage™ from Western Diversified.

This could be the most important ad that you read today. The Advantage and The Advantage Plus extended service contract from Western Diversified is the finest product on the market, and that translates into one word for you: PROFITS.

For your customers. With The Advantage, you are providing your customers with a no-hassle, comprehensive extended service contract that allows them to enjoy their new or used car "worry-free."

For your dealership. The Advantage allows you to achieve maximum profits, the greatest customer satisfaction, with no personal liability.

Western Diversified has been in the Finance and Insurance business over 22 years. They have a commitment to their dealers that has been proven over the test of time. Western Diversified is around for the duration, committed to higher profits for their dealers through better programs. The Advantage and The Advantage Plus extended service contracts are yet another of the quality programs brought to you by Western Diversified. Call us for details, TODAY.

Mid-June market down 7.45 pct.

Incentives hangover trims sales

By Jenny L. King
Detroit Reporter

Payback time arrived June 11-20 as the domestic auto makers reported a post-incentives sales decline of 7.45 percent.

That, anyway, is one explanation for missing last year's mark for the same period by 19,000 units. The overdue lien resulted from expanded sales of lower-interest-rate models offered the public in May.

Early-June sales continued at a brisk pace, staying 15.96 percent ahead of the same period of 1984. But the June 11-20 total of 240,489 was down 7.45 percent from 259,844 a year earlier.

Compared with the first 10 days of the month, though, there was favorable news: The mid-June total was up 11.05 percent from the 216,565 reported for June 1-10.

Year-to-date sales of 4,094,787 were up 3.27 percent from 3,965,306 in 1984.

When things don't work out well, it's a comfort to have someone to blame, and General Motors was the most obvious scapegoat in mid-June. GM was down 12.64 percent from its year-ago number. Its loss of almost 20,000 cars (to 134,014 from 153,412) was too substantial a drop for the remaining makers to prop up.

Ford Motor Co. sales were up 1.62 percent for the period, to 64,333 from 63,306 last year. Chrysler Corp. reported a decline of 1.62 percent, down to 31,915 from 32,442.

American Motors reported estimated sales of 2,650 new cars, down 42.70 percent from 4,625 year ago. Honda was up 28.92 percent, to 4,667 from 3,620, while Volkswagen slipped 11.44 percent, to 2,160 from 2,439. Estimated sales of Nissan Sentras were 750 for their first mid-June in the domestic market.

GM's share of the domestic market tumbled to 55.73 percent from 59.04 percent one year earlier. Ford expanded to 26.75 percent from 24.36 percent. Chrysler earned 13.27 percent, up from 12.49 percent.

Honda claimed 1.94 percent, up from 1.39 percent. AMC dropped to 1.10 percent from 1.78 percent, as VW slipped to 0.90 percent from 0.94 percent, and Nissan had 0.31 percent this year.

Only four domestic makes had mid-month sales increases. Chrysler was up 17.62 percent from 1984, Ford climbed 5.72 percent, Oldsmobile was up 5.32 percent and Honda grew by 28.92 percent.

On the other hand, Plymouth was down 19.71 percent, Dodge was down 3.73 percent, Mercury was off 6.03 percent and Lincoln slipped 4.59 percent. Buick plunged 35.76 percent, Cadillac dropped 18.83 percent, Chevrolet was down 14.76 percent and Pontiac slipped 9.63 percent—although its total of 19,502 was greater than Buick's 17,033 for the period.

AMC sales were down an estimated 17.65 percent, Renault dropped 45.24 percent and VW was down 11.44 percent.

The most recent daily selling rate of 26,721 was down 7.45 percent from 28,872 for mid-June, 1984. There were nine days in the period both years.

Estimated 10-month total for 1984 under BBB program

FTC order costs GM $30 million

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—A Better Business Bureau mediation-arbitration program for owners of General Motors vehicles resulted in an estimated $30 million in payments to 100,000 consumers in the first 10 months of 1984, FTC data indicates. The program will run until 1991.

FTC Chairman James C. Miller III estimated the GM payout based on preliminary FTC data showing that 9,529 consumers received $3.3 million during the first 10 months of the nationwide program. Consumers covered by the preliminary numbers were from Atlanta, Cleveland, Dallas, Milwaukee and Salt Lake City.

The agency believes an additional 90,000 consumers received awards in 1984, but has not yet processed the national figures.

Miller said, "The data shows we are successful in getting money directly into the hands of consumers in a short period of time."

Miller pointed out that the FTC numbers do not include settlements made by GM outside the mediation-arbitration process, nor do they include payments made for repairs other than those covered by the agency's consent decree. That means GM potentially paid out far more than $30 million last year, Miller said.

The FTC's 1983 consent order required GM to set up the arbitration-mediation program in cooperation with the National Council of Better Business Bureaus.

The order followed FTC allegations in 1980 that GM failed to notify consumers about serious problems with the THM-200 transmission, camshafts in 305-CID V-8 gasoline engines and fuel injectors and injector pumps in 350-CID diesel engines.

A GM spokesman termed the initial workings of the consent-decree arrangement "fair and effective" and said, "We agree with the FTC conclusion that the GM/BBB program is successful."

In Milwaukee, 3,561 persons completed the program and total cash awards of $1,356,000 were made.

Figures for the other cities were: 3,939 persons and $1,348,000 in Cleveland; 1,125 persons and $301,000 in Dallas; 799 persons and $307,000 in Atlanta, and 105 persons and $32,000 in Salt Lake City.

Miller said the larger number of cases in the Cleveland area could be attributed in part to publicity the program received in that city. The agency's regional office there was the first to file suit on behalf of GM vehicle owners.

The mean payment was $358 for consumers in the five cities who requested cash and received awards of some or no cash. The agency estimated 83 percent of the arbitrated and mediated cases

FTC's report on GM matter draws brickbats

By John A. Russell
New York Staff Writer

NEW YORK.—The FTC painted a rosy picture last week in revealing statistics on the arbitration and mediation program involving General Motors and the Better Business Bureau, but that feeling was not universal.

A number of consumer groups and at least one state attorney general's office slammed the program, generally calling it a "cop-out" by the FTC.

According to those groups, complaints about the system, established a little over a year and a half ago, mention long delays before the arbitration proceeding and decision is completed as well as misinformation given to consumers by the BBB local offices.

Further complicating the problems is a class-action settlement reached late last year in Federal District Court here involving GM's diesel engine. Under the provisions of that settlement, owners of GM diesel-powered cars had to inform the court that they specifically wanted to "opt out" of the decision.

A number, estimated at approximately 50,000 out of a possible 400,000, did apply for the exclusion. Yet, according to several sources, the BBB, as the agent for

GM Holden's new RB Gemini

The front-drive RB Gemini notchback replaces the original rear-drive model. The new RB is a product of Isuzu in Japan—with Chevrolet and Holden design input—and is assembled in Australia with some local components. The four-cylinder car went on sale recently in the U.S. as the Chevrolet Spectrum.

Holden Gemini replaced with front-drive RB model

MELBOURNE, Australia.—General Motors-Holden's, Ltd., has announced a front-wheel-drive replacement for its rear-drive Holden Gemini, a model the company has offered for more than 10 years.

The RB Gemini is a four-door notchback with a smaller, more powerful engine: A four-cylinder, in-line, OHC, 1.5-liter mounted transversely.

Engineering features include transistorized ignition and an electric cooling fan. Five-speed gearbox is standard, with an optional 3-speed automatic. Equipment levels have been significantly improved.

The Japanese-designed car has several European styling touches.

To demonstrate the Gemini's traditional selling features—reliability and economy—GMH staged a notable endurance test for the light car.

A new Gemini was taken straight from the assembly line and driven continuously for 80 days and nights. Eighty drivers, from GMH test drivers to gardeners, security officers and canteen staff, drove the car a total of 127,000 miles.

Cruising at speeds of up to 75 MPH at GM's Lang Lang proving ground in Victoria, the Gemini stopped only for gas, driver changes, three minor repairs and specified routine services.

GMH said this test was the equivalent of 13 years of regular driving.

The overall average speed was 67 MPH and the fuel consumption an average 38 MPG. No oil was added.

Like the previous Gemini, the RB is a product of Isuzu in Japan but is assembled in Australia with some local components.

It differs from the first Gemini because Chevrolet in the U.S. and Holden in Australia had sizeable input in its design and testing.

Before going on sale in the U.S. as the Chevrolet Spectrum, 120 prototypes of the car were built and tested in the temperature extremes of Australia's summer and Canada's winter.

Gemini will be offered in two trim levels, with a third low-priced model for government and fleet buyers.

The base SLX will sell for about $9,495; the more upscale (but mechanically identical) SLE for $10,409.

GMH Managing Director C.S. Chapman said that with the Astra, Barina Camira and RB Gemini, the company's strategic approach to the increasingly diverse four-cylinder market is complete.

"I believe these cars will find their major appeal with women, who form 61 percent of buyers in this category," Chapman said.

Chapman said GMH intends to be the country's top-seller to women and is confident of regaining the No. 2 spot in the market behind Ford. (GMH dropped to third place behind Toyota last year.)

1,628 vehicles auctioned at 28th anniversary sale

FREDERICKSBURG, Va.—The Fredericksburg Auto Auction attracted a large vehicle consignment with a 28th anniversary NASCAR racing theme sale, The Fredericksburg 500.

There were 1,628 vehicles auctioned in one day. Robert E. Edwards, general manager, said it was one of the firm's strongest anniversary sales.

"We couldn't have asked for more," he said, referring to the large consignment, good sales percentage, strong dealer attendance and promotional excitement.

The sale featured lively bidding on a race car once driven by Bobby Allison.

All registered dealers in attendance were invited to a free barbecue lunch.

Fredericksburg Auto Auction is one of 16 operated in the U.S. and Canada by Manheim Auctions, Inc., Atlanta.

Milwaukee auction recon to meet fleet customer needs

CALEDONIA, Wis.— Construction is under way on a new reconditioning center at Metro Milwaukee Auto Auction.

The center is scheduled to be completed Sept. 1 and will be the 20-year-old auction's first such on-site facility.

Saab recalls 22,700 cars

ORANGE, Conn.—Saab-Scania of America is recalling about 22,700 cars in two separate actions.

The cars involved are about 11,100 1985 Saab 900 Turbos and about 11,600 early-production 1984 Saab 900, 900S and Turbo models.

The 1985 Turbos will be checked for an incorrectly installed fuel hose. The 1984 models will be checked for an improperly mounted electrical cable which may rub against metal, damaging the insulation. Both conditions could lead to a fire, Saab said.

Plant closings continue: AMC, Ford, Nissan, VWoA this week

Pre-vacation build: 174,220 cars

By Louise Kertesz
Detroit Reporter

U.S. manufacturers scheduled assembly of 174,220 cars last week as two more auto makers prepared to close their plants for vacation.

That total was down a bit (0.87 percent) from the previous week's 175,757, but was 10.54 percent more than the year-ago week's 157,603.

The total auto build so far this year is 4,414,062 cars, 3.62 percent ahead of the 4,259,973 completed last year at this point.

Companies shared last week's estimated production as follows: General Motors, 60.53 percent; Ford Motor Co., 18.92 percent; Chrysler Corp., 16.07 percent; Honda of America Mfg. Co., 1.81 percent; Volkswagen of America, 1.08 percent; New United Motor Mfg. Co., 0.86 percent, and Nissan Motor Mfg. Co., U.S.A., 0.73 percent.

American Motors' Kenosha plant is idle for inventory adjustment this week (July 1) after being closed for vacation for two weeks. It is scheduled to resume production July 8.

All assembly plants will be closed Thursday (July 4) for Independence Day.

All plants but Chrysler's will also be closed Friday (July 5).

Honda's Marysville (O.) plant also will be closed next Monday (July 8).

Volkswagen of America's Westmoreland (Pa.) plant is down this week for two weeks because of a shortage of Bosch fuel-injection system components. The plant is scheduled to resume production July 15.

All Ford plants are closed this week for the first of two weeks' vacation. Changeover will proceed at some of those plants.

The Ford facilities are scheduled to reopen July 15.

Nissan's Smyrna (Tenn.) plant is also closed this week for the first of two weeks' vacation, with production scheduled to resume July 15.

GM plants working two overtime shifts Saturday (June 29) were: Fairfax, Kans.; Doraville, Ga.; Lakewood, Ga.; Detroit; Janesville, Wis., and Lordstown, O.

Chrysler scheduled two nine-hour daily shifts this week at its plants in Belvidere, Ill., and St. Louis (Nos. 1 and 2).

Chrysler's Jefferson (Detroit) plant is slated for two 8½-hour daily shifts this week.

Truck production under 70,000 for first week in 13

With vacations and changeovers in effect at several assembly plants, truck production fell below 70,000 last week for the first full work week since the end of March.

Last week's scheduled output of 66,128 trucks was down 9.47 percent from the previous week's 73,047 but a bit ahead of (0.68 percent) the year-ago week's 65,679.

So far this year, 1,775,675 trucks have been assembled, 9.54 percent more than the 1,621,081 completed last year at this point.

In observance of Independence Day, all plants will be closed Thursday (July 4); General Motors plants will also be closed on Friday (July 5).

International Harvester Co.'s Springfield (O.) plant closed for vacation Thursday (June 27). It is scheduled to resume production July 15.

All Ford Motor Co. plants are closed this week (July 1) for the first of two weeks' vacation; changeover work will continue at some plants.

Nissan Motor Mfg. Co.'s Smyrna (Tenn.) plant also is shut down this week for the first of two weeks' vacation.

GM's plants in Pontiac (Nos. 2 and 5) were scheduled to work two overtime shifts Saturday (June 29).

Early retirement program set up by Sealed Power

MUSKEGON, Mich.—Sealed Power Corp, manufacturer and distributor of automotive parts and components, has instituted a voluntary early-retirement program for certain members of its salaried workforce.

The company said the program could affect up to 150 men and women during the period from June to December of this year, or about 6 percent of the company's salaried payroll. The move is designed to result in "important future economies for the company."

A spokesman said the early retirements will be spread throughout the company's 35 divisions rather than concentrated in a single area. He said the early retirements will be available to a wide classification of employes, including engineers, accountants, clerks and a "a couple of foremen."

The early retirement program will result in added costs for the company during 1985, but will assist in the long-term goal of reducing expenses.

Sealed Power has declined to specify the amount of the extra costs that will be absorbed this year, since the early retirement is voluntary. However, the spokesman predicted about half the eligible employes will accept early retirement.

The company employs about 7,500 salaried and hourly workers. Sealed Power produces piston rings, sealing rings, cylinder sleeves, transmission rings and other automotive components; specialized service tools, and instruments and products.

Counting both original equipment and replacement markets, about 80 percent of Sealed Power's business is auto-related, according to the company spokesman. In 1984, the company reported earnings of $41.3 million on sales of $500 million.

Canadian output cut by holidays and vacations

Vehicle production in Canada slowed last week because of plant closings related to holidays, vacations and model changeovers.

There was no Saturday overtime (June 29) during the Canada Day weekend; General Motors' St. Therese assembly plant was closed for the Quebec national holiday last Monday (June 24), and American Motors' Brampton (Ont.) plant shut down last week for vacation and changeover. AMC's plant is scheduled to resume production August 5.

All assembly plants are closed today (July 1) in observance of Canada Day.

Last week's estimated production of 24,586 cars was down 4.66 percent from the previous week's 25,789. The prior week's total—though some 440 units short of target—was still the best output of any week since the week ended May 14, 1983, when 27,994 cars were assembled.

Last week's production was 8.27 percent better than the year-ago week's 22,708.

So far this year, 547,461 cars have been assembled, 6.98 percent fewer than the 588,550 completed last year at this point.

Manufacturers planned assembly of 17,126 trucks last week, 10.47 percent fewer than the previous week's 19,128, but 6.58 percent more than the year-ago week's 16,069.

Year-to-date, 462,540 trucks have been built, 6.47 percent more than the 434,445 assembled last year at this time.

International Harvester Co.'s Chatham (Ont.) plant is closed this week for the first of two-weeks' vacation. It is scheduled to resume production July 15.

VW Group takes lead in Europe

By Richard Feast
European Editor

LONDON.—The Volkswagen Group has taken a narrow lead in the Western European new-car market.

It was market leader in April and May, giving it a five-month share of 12.8 percent, compared with Fiat Auto's 12.7 percent in second place.

These unofficial early returns show that Volkswagen and Fiat have built up a significant (in Europe) lead of more than one percentage point over the Continent's remaining four volume manufacturers.

At the end of May, the remaining order was: Ford and General Motors (Opel and Vauxhall), 11.7 percent each; the Peugeot Group (including Citroen and Talbot), 11.6 percent, and Renault, 10.8 percent.

The Fiat Group had led the tight race until the end of April. Ford won last year by a slim margin over Fiat and is now level with GM, which was fifth in 1984.

Total new-car demand in the first five months was down 3.4 percent, at just over 4,773,000, compared with the year-earlier period.

The share of Japanese makes

Sorry, it's not for sale

A different kind of Cimarron

This Cimarron concept was developed by Cadillac design studios at the request of the Automotive Products Group of PPG Industries and will be used as a VIP courtesy car during the CART/PPG National Indy Car World Series of Racing events. It has two windshields, front and rear TV and two-way radios with headsets. Wheelbase is 106.2 inches. The engine is a specially built front transverse-mounted 2.8-liter V-6.

Big 3 economists see strong year, but '86 is cloudy

By Michelle Krebs
Financial Editor

Economists for the Big Three auto makers look for 1985 to continue being a good year; but watch out for 1986, they say.

The industry this year remains on track for approximately 15 million car-and-truck sales. It would mark only the second time the industry has hit the 15-million mark.

Early in 1985, General Motors had predicted a 15-million-unit year, with 10.7 million passenger car sales and 4.3 million truck sales.

"We're still within 100,000 and, if anything, it may be higher than we are forecasting," said David C. Munro, GM's general director of macro economics. "Truck sales might well be up to 4.4 million units.

"We're broadly confident of the story line we had in mind for the economy six months ago," he added.

Chrysler Corp. and Ford Motor Co. had been conservative in their estimates earlier in the year, but they were optimistic that the numbers might be higher than their predictions.

Chrysler Economist Donald P. Hilty recently upgraded his forecast of motor-vehicle sales to 15.4 million units from 14.5 million. He estimated 10.9 million car sales and 4.5 million truck sales for the year.

Hilty watches 10 economic indicators and assigns the colors of traffic signals to them. In his most recent forecast, he has no indicators bearing red lights and only half with yellows, rendering a more optimistic outlook than six months ago.

Ford Economist John V. Deaver also upgraded his forecast for vehicle sales and now looks for 14.9 million units—10.6 million to 10.7 million car sales and 4.3 million truck sales. His upgrade came on the heels of a better-than-expected first half.

The economy generally has shaped up the way the auto makers' economists saw it in January, and they see nothing on the short-term horizon to upset the trend.

"There's nothing surprising in the market ahead," said GM's Munro. "We expect it to be a strong and level market. Unlike the rising growth of 1983 and 1984, 1985 is more a plateau year.

"There's nothing on the scene that disturbs us," he added.

The three economists see U.S. economic growth, as measured by the Gross National Product, holding at the approximately 3 percent rate, or just under, that they had

Imports up more than domestics

Sales rise 2 pct. for first half

By Jenny L. King
Detroit Reporter

First-half new-car sales in the U.S. mirrored exactly the sales pattern developing month by month this calendar year: Domestics were up only slightly from 1984 levels and imports hinted at a renewed sales surge following the easing of restrictions on the Japanese makes at the end of March.

First-half domestic sales totaled 4,314,667 this year, up from 1.61 percent from 4,246,343 in 1984 and highest for the half since 1979 when 4,446,176 new cars were delivered.

There were sales increases in four of the first six months this year, whereas each comparable month was up in 1984 when sales were rebounding energetically from a four-year slump.

Imports were up 6.93 percent in the first half, to 1,316,959 from 1,231,655. The total included record sales for BMW, Mercedes-Benz, Jaguar, Saab and Volvo.

Total industry sales for the first six months were up 2.80 percent, to 5,631,626 from 5,477,998.

Imports claimed 23.39 percent of the first-half market this year, up from 22.47 percent in 1984.

Their number increased 6.93 percent, while domestic sales were up 1.61 percent January through June. And on the wings of record sales, imports advanced to 26.87 percent of the month's market from 23.52 percent a year earlier.

The Japanese share of the import total inched to 76.81 percent this year from 75.87 percent the first half of 1984.

June domestic sales, crippled by a 21.78-percent third-period decline, were down 6.97 percent, to 676,675 from 727,370. Imports wiped out their former June record of 235,282 set in 1983 with a new high of 248,659. That total was up 10.59 percent from 224,844 a year earlier.

The grand total in June was off 2.82 percent, to 925,334 from 952,214.

Six-months results were impressive for Chrysler Corp., Ford Motor Co. and Honda, all increasing sales compared with the same half of 1984. Chrysler was up 17.66 percent, to 603,818 domestic units from 513,174, or plus 90,000 new cars. Ford climbed 7.20 percent, to 1,081,872 from 1,009,186, and Honda domestic sales were up 26.47 percent, to 83,051 from 65,670.

General Motors reported first-half domestic sales of 2,436,247,
